...so providing the urls wasn't enough evidence for you? You might try
using one of them (I highly recommend the State Department url). Read
the header information where it states "Key Officers of Foreign Service
Posts". The same information is published twice yearly in book form.
The book is called, "Key Officers of Foreign Service Posts". You've
already made one stupid statement. Now you've followed it up with a
second. You can then remove the second foot from your mouth now.

> listings of staff can be called "key lists."

You'd be wrong yet again. Go look at the State Department url
provided. Let me know what the list is titled. Funny that none of the
people who worked for me are listed in any of those lists. I don't see
a listing of all Econ or Political officers, only the heads of section.
I guess it isn't a listing of embassy staff.

> In magazines such a listing is called the "masthead."
> Names, titles. DSN phone directories also have them.

The information provided was in response to another incorrect assertion
from you. It wasn't a masthead from a magazine and it wasn't a
telephone directory though the State Department does have a telephone
directory.

N2EY: "Besides, here's a simple, plain fact:

What is your point? I know what an amateur radio license is. I have
one.
It is not required to build any piece of equipment. It is required to
operate in the amateur bands.

> >Your words. You use them or words like them all the time in here.

Irrelevant. Heil can read.

> How much SSB equipment did the US embassies in Africa
> use, Mr. FSO? Did you invent the use of CW as an order
> wire on State's SSB circuits too?!?

All U.S. embassies in Africa use both fixed and mobile HF SSB equipment. They also make extensive use of VHF FM base, mobile and hand-held transceivers and repeaters.

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior."

>ARRL claims to be "THE National Society for Amateur Radio" ...

Is there another national society for amateur radio?

NCI cannot claim to be one, because

a) it is "international"
b) its sole stated purpose is to end stand-alone Morse code testing.

What other "national society for amateur radio" exists in the USA?

>they
>most certainly claim to speak for all when they file comments with the
>FCC etc.

How?

>Not directly in so many words, but it is CLEARLY implied.

Where? Where does ARRL claim to speak for all?

ARRL's membership number is clearly stated. Not a secret in any way.

What is NCI's current membership, give or take 1%? Why has that number been
such a closely guarded secret?

>Fortunately, the FCC understands the reality.

The FCC clearly does not interpret ARRL's words as claiming "to speak for all when they file comments with the FCC etc." Such an implication exists only in the minds of a few. Those few infer what is not implied.

Does FCC know NCI's current membership, give or take 1%? Why has that number been such a closely guarded secret?
>
Anyone who comments to the FCC is, by definition, telling the FCC that their ideas represent what is best. Of course "best for whom?" is a different question. Some comments, like one that demanded an age limit of 14 years for any class of amateur license, do not represent what is best for the ARS.

Is there another amateur radio society in the USA that provides even 1% of the services ARRl provides to the amateur radio community?

Don't be so close minded or empty headed.

Notice that the thread I referred to in rraa concerned DoD and other
government uses, where frequency and band hopping occurs frequently,
in possibly in an environment where you don't want to go out and
change the effective length of a dipole with jumper leads.

Yet there are even applications tor the T2FD in amateur use, but
you'll never see that, Empty Head.

> > What is the amateur standard, and where

Though loud, his orders are meaningless.

> That's in parallel with the "26-patent" kid in Pennsy who
> gave you implicit ORDERS on which antenna to use. :-)

He confuses ARRL Antenna Book with FCC Part 97. (Kelly doesn't
realize that the t2fd was not intended to be a one band/one frequency
antenna. Now he thinks it's a dummy load. What kind of an engineer
thinks that?)

> There is only ONE way...their way. That's the way is IS!
>
> What next, close-order drill? :-)

It can't be good, whatever it is.

He must be getting very frustrated at this point, which is a reason to
go back to the point of this thread.

Steve, what was wrong with my statements?

Lennie, PLEASE produce some evidence that you have been prevented from
posting what you will to this (or any other) forum by me or anyone else.

>One of the classic attempts at intimidation was the home page
> on AOL, all because of his childish rage over a mistake.

The radioelectronics "professional" made a mistake? I don;t think so.
You're an opprotunist, Lennie, and you certainly took advantage of that one.

>Sorry, badass Dill Instructor, but LIBEL, however slight, is still
> LIBEL with or without capital letters. Robeson continually puts
> himself into a libelous position that he cannot extricate.

Pointing out YOUR lies, Oh Lame One? I don't think so.

>Robeson seems enraged that others could have gathered
> experience in radio communication before him (including his
> birth) on HF...and then gone on to LF, VLF, VHF, UHF, and
> higher as a professional.

I am sure you think so, Lennie. The truth is that you are the one that is
enraged...that AMATEURS can do daily what you had to go to school for.

>All that is Robeson's obvious problem. Personal rage is not
> justified nor an excuse for dishonorable behavior.

Salpping a punk like you around in this virtual boxing ring is no problem,
Lennie, nor is it dishonorable.

Dishonor is trying to embellish and impress others with your alleged
war-hero status at the expense of combat KIA's.

THAT is dishonorable.

>Once again, a LIE about "hating amateur radio." Disinformation
> certainly.

Not with the evidence you provide here, Lennie.

Show me ONE thing you have done FOR Amateur Radio lately, Lennie.
"Expressing (your) opinion" does not count.

How many radio clubs have you lectured at?...date/time/place, please.

WHO have you mentored in the licensing process? Who had obtained
licensure BECAUSE of you...not INSPITE of...

What operating events have you participated in?

What classes have you taught and in what media was it presented?

>The "AN/PRC-119 family" of military radios...(SNIP)

...lives in another community. Not rec.radio.AMATEUR.

>Robeson has a selfish little habit of modeling all of US amateur
> radio on what He believes, what He experiences, what He does.

You can provide specific quotes that substantiate this, of course...?!?!

>Robeson simply cannot tolerate an opposite opinion.

Sure I can. What I can't tolerate are pathological liars. (That would be
you, by the way...)

>Robeson has NOT "disproven" anything.

I don't have to, Lennie. You do it for me. You make assertions about
this-or-that, then are "called" on it. You are given ample opportunity to
provide the expected "evidence" to back up your assertions, and you never do.

Just more repetitions of your SINCGARS stories, more retellings of the
glory days at ADA, and how Dave Heil's interpretation of "order wires" negates
any/everything he has ever done in Amateur Radio.

>>However I refuse to allow it to go unchallenged.
>
> That's the pity of all this, the cause for a constant barrage of
> pejoratives, commands, disinformation, and general uncivil
> and dishonorable behavior of Robeson

The pity of it is that you keep lying in the face of evidence that you ARE
lying, or at least making up untruthful assertions that youa re unprepared to
validate.

I am not the one with something to prove here, Lennie.

>Robeson cannot stand opposition in anything.

Prove it.

>Robeson has no credentials in psychology nor is he a medical
> doctor. The use of "pathological liar" labeling is interesting, but
> it only reinforces his own petty personal demand that everyone
> Believe in what He Believes.

No one "has" to believe anything, Lennie. Least of all what you spit out
in here.

>No, it is just Robeson indulging in another immature, uncontrolled
> spasm of rage at being opposed in anything.

Call it what you will. It keeps your lies and rants in check.

>No, it is just Robeson indulging in another immature, uncontrolled
> spasm of rage at being opposed in anything.

Nope. Just opposed to what you represent...dishonesty and deceit.

>His "solution" is to disregard
> civility for invective, seek "destruction" of his opposition by any
> means possible.

If it WAS by "any means possible", theses exchanges would have stopped a
long time ago.

>It does waste nearly everyone's time in here and that's a pity for
> all the rest.

Then stop lying and stop providing so many opportunities to show you for
what you are.

Putz.

Bill:

No, I don't. Like it or not, amateur radio is not a democracy, and doesn't have to be! It needs to be "democratic" only to the extent that all people are equally eligible to apply for a license, assuming they can meet the established licensing requirements. However, the Welfare State liberals saw the Morse code testing requirements as an inconvenience which forestalled their progress toward the goal of getting an HF microphone in front of their faces, so they whined long and hard enough to get them reduced to the point of insignificance.

It's amazing how our hobby's backward progress has tracked that of society as a whole.

>Not at all. I welcome not only free speech, but open debate. You on
>the other hand wish to silence Len in amateur radio matters as he does
>not have a license.

Not at all. I would like to see Lennie silenced becasue he has lied repeatedly and makes outrageous and unsupported claims against Amateur Radio as a whole.

You support no code, and I have no argument with that. So does Carl and several others. Do you see me responding to them like I do Lennie? No. It's because, like it or not, they express THIER opinions without lying or making easily disproved assertions about Amateur Radio, the ARRL in general or certain Hams in particular., and they show me the same courtesy.

>And what of your endless spamming?

So people should just let Lennie lie uncontested?

>They ought to be. This group is supposed to be about that.

That argument is over with, Brian. There are other IMMEDIATE issues that need to be and should be addressed, but they aren't. I ahve introduced and reintorduced them, but they fall on deaf ears, so it shall be...I am not another "Vipul" who will damn all Amateur Radio because it won't meet MY needs.

Here's some facts:

(1) The FCC has so far refused to revisit any further petitions on the Morse Code testing issue until it is addressed in WRC-03.

(2) Most major western powers and most of the rest of the world has already moved to a minimalist position on Code testing, dropping it to 5WPM or "code recognition" tests. Many of THOSE countries have stated that they will drop code testing when the ITU treaty is ammended to drop it.

(3) The only major Amateur Radio organization in the United States has dropped it's own long-standing support of Code testing. Therefore with the exception of the occassional anonymous "No Code=No Ham" hold outs, there is no organized support for continued code testing.

Do I like it? Not particularly. But I accept it and will try to encourage new Hams to learn the Code even after ITU deletes or ammends S25.5.

>Your zeal only exposes you for what you are.

Intolerant of the lying and deceitful?

>> Have you seen him provide one iota of "evidence" about ARRL
>> "dishonesty"...?!?!
>
>Ask him if he has one iota of evidence concerning Watergate,
>Iran-Contra, Savings and Loan scams, Monica-gate, or Dangling Chads.

None of those are in discussion here, now are they?

>A horse has "gait." Are you a veterinary nurse too used to
> four-footed creatures? Why do you treat others a mere
> animals?

Sorry, Lennie. Here's yet ANOTHER example of you spouting off on
something you know nothing of. One's ability to ambulate and the
characteristics of that ambulation is refered to as "gait".

>I made no claims of going for that, only that it COULD be
> done.

Uh huh.

>Why not? I got my First Class Radiotelephone (commercial)
> license in one examination session in 1956 at an FCC field
> office in Chicago. Without using any Q&A book.

Here you are in the fifties again, Lennie. >>WE<< are in the 21st
century. Care to come along? And your First Phone (GROL) grants NO privileges
in the Amateur Radio service. Sorry.

>I never said ARRL was "dishonest," just that their actions
> on "examining" two six-year-olds and "passing" them, then
> publicizing them on their website was SUSPICIOUS.

Not truthful.

You have blatantly called the ARRL dishonest on numerous occassions.

>But, never mind that...you expect everyone to Believe in
> ARRL, that they Never Do Wrong (for They are Holy).

Nope. Never said that. I HAVE, however, asked YOU to provide the
EVIDENCE of this dishonesty you allege.

You have not. You've had at least six months to do so.

>I was assigned to the....(SNIP)

Blah blah blah blah.....

We've heard it before. The best thing you could do is shut up about it
and let it pass, Lennie.

>The 71st Signal Service Battalion....(SNIP)

Has nothing to do with Amateur Radio nor your qualifications to serve as a licensee in an FCC radio service.

>I have the name, rank, Army Serial Number, of each one of
> the 19 signalmen who died in that July, 1950, crash.

Then you should find thier families and ask forgiveness for having used the memory of their loved ones deaths to promote yourself in this forum, you creep.

>The Putzman seems to think that NO ONE can possibly
> take pride in the service of their country unless his Royal
> Hindness "approves" of it. But, what does the Putzman
> say about his own service?

I don't need to, Lennie. It's not important in here. What I do TODAY is.

>"Seven times in hostile action!" No references, no details,
> no names, no verification, no nothing except a very general
> statement of standard braggadoccio

As opposed to your "I can't talk about recent electronics work because it's still confidential"...Un huh...Cute, Lennie.

>Putzman never did any military communications. He can't
> even name on of the standard radios of the USMC for
> small (or large) unit operations.

So? That you have memorized these radios make you a competent Amatuer Radio operator HOW, Lennie?

>Total BULLSHIT on the "classified" claim.

Back at ya, Lennie. What as that stuff day-before-yesterday about you couldn't discuss all you recent work because of confidentiality?

Guess that only goes one way, eh?

>Putzman wants to chastise others for not talking about
> amateur radio subjects...while he goes on and on...(SNIP)

Sorry, Lennie, I do NOT go "on and on" about any of the topics you mentioned. CERTAINLY not like we are innundated with war lies about the 8235th, the 71st, or any thing that happened with radio between 1953 and 1956, and the deployment of SINCGARS. None of which is pertinent to 21st century Amateur Radio.

>US amateur radio is NOT a branch of the US military.

Then WHY do you think anyone here is REMOTELY interested in your retelling of the story of the 8235th ad nauseum? Why are we bombarded with tales of the efficiently of SINCGARS?

It's NOT Amateur Radio, Lennie. YOU said it, now LIVE by it.

>US amateur radio is a hobby activity, recreation, and NOT
> vital to national defense....(SNIP)

In YOUR opinion.

>Putzman won't accept reality.

I accept it fine. You are a liar and a a creep. See...No problem.

>To be honest, prior military service does NOT have any
> direct bearing on amateur radio...but Robeson is obsessed
> with that, continuing to demean and insult veterans of the
> US military that won't agree with his writing in here.

I am not the one hiding behind the deaths of comrades who died in combat 3 years beore I joined a unit, Lennie.

> It may be greater than DISHONOR by Robeson to dismiss
> 19 casualties of a war that happened before he was born
> because of his little personal feud with another. Sad.

Nice dodge. Didn't work. Eveyone see's through it but YOU, Lennie.

Sheeesh.

More people remember MUJ's drunken rantings on 14.313 ten years later.

More people remember Drunken Walter YEE's fantastic broadcast-grade
audio and playing of German Marches on 75 Meters. (it's a true shame all his
recordings and ham radio equipment are now residing in a landfill in
New Jersey someplace - word is his XYL cleaned the place out w/dumpster)

More people remember WB2OTK for being one of the freshest people
to key a ham radio microphone in a very long time. Rich was without doubt
the
Sam Kinnison of 20 and 75 meters. (boy do we miss him on HF! a true comic
so needed in the desert-dry world of humorless ham radio)

More people remember "Bernie the Bagleman" who was the *original*
20 meter "Dancing Chicken", WD4PZT with his infamous trailer
park chicken barbeques, "Raincoat Charlie" who would drive Mike
and Judy nuts. (...get out that six D-cell vibrator !)

And finally....the Red Panty Man who we need to come up on 14.275
and sing his diddy before k1man starts up his self-gratification broadcast.

need I continue?
> Glenn Baxter is role model for new hams........

Imagine RH pulls up to k1man
with Federal Marshals and a tow truck w/towmotor.
Down come antenna towers then toss those
out-of-alignment worn out Collins rigs into the back
seat of the car with Baxter in a straightjacket alongside...

By December 1992, all power and telephone lines in Mogadishu had been
downed to pilfer. The former U.S. Embassy there had likewise been
stripped of all wire, fixtures, switches, and floor tiles.

Without power, there were no telephones and no running water, no radio
stations were on the air til later as Warlord Aideed needed to
consolidate support to fight the Americans.

I think it's merely that it's harder to attract attention using CW.

NCI membership numbers started with either 1000 or 1001, not 0001, so
a member number of 4304 indicates a maximum of 3305 members, not 4304.

Membership is free and does not expire. Only way a member becomes a
nonmember is to request removal. Which has been done in at least two
cases that I know of.

> Were/are they all licensed
> hams? How many were/are coded hams?

Unknown - neither is a requirement of membership.

Hello all,

I'm thinking of joining one of the MARS groups in the NY area, and I'd like to hear anyone's opinion as to which group may be the best. I'm interested in helping with military functions and/or being available "just in case".
I'm new to ham radio, but I learn very quick. I have experience as a Police/Fire/EMS dispatcher and have worked some local disasters. I'd probably be most comfortable in a progressive and active group.
From listening in my area it seems the Air Force MARS is most active in voice, but I've heard little other than reads of old regulations and check-ins for time logging.
I'm very experienced in computer technology, and would be most interested in digital radio/modem work.

Any thoughts guys?

Appreciate you comments,
Jim/KC2KIW

AF MARS is the better choice at the moment. All MARS programs are being intgergrated so we can/and do check into each others nets.

Big changes are in the works. Activity will certainly pick up. Thats all I can say at the moment.

I recently re-joined AF Mars . I have been in All of them at one time or another.

1190. Leonard's Tall Tales - Volume I

Newsgroup: rec.radio.amateur.policy
Date: 2003-01-28 22:17:19 UTC
From: Dave Heil <k8mn@earthlink.net>
Message-ID: <3E3701BA.5D4EE245@earthlink.net>
Source record: 60273

In the interest of putting Len's repeated claim that I claimed originality for use of CW on an order wire circuit (he claims it took place three years ago but it was five years back), I thought I'd test Google's "memory" on the subject. Look what I came up with:

"From: Dave Heil (k8mn@clinet.fi)
Subject: Re: Can't we all just get along?
Newsgroups: rec.radio.amateur.policy
Date: 1998/01/01

Len, you tried to give me a lesson in the history of radio and you also twisted some dates and events but, to what end? What was that all about? FYI: I was handling the QSYs, openings and closings for a government 75 baud circuit via CW from late '87 through late '89 from Guinea-Bissau. Guess we didn't know CW was obsolete, huh?

Dave Heil OH2/K8MN"

Brian Burke introduced a comment shortly thereafter. I responded thusly:

"From: Dave Heil (k8mn@clinet.fi)
Subject: Re: Can't we all just get along?
Newsgroups: rec.radio.amateur.policy
Date: 1998/01/03

Brian wrote:

> Dave, as a professional communicator, you should have already known that
> your CW circuit was obsolete. At least you should have had the
> initiative to ask if there was a better way to move your message traffic
> than through a CW circuit.
> Doing something the same old way just because "thats the way we always
> did it," is no longer the right answer. When one of my younger troops
> asked why we were doing something the way we were doing it (or why we
> were doing it at all), I had to have a better answer than that. When I
> didn't, change was imminent.
> By the way, I was using SATCOM voice way back then. Worked great.
> 73, Brian/N0iMD

Brian,

Do you really think I was doing something the hard way because of my personal choice? Asking for a better way and getting a better way are two different things. I didn't have access to satellite equipment and certainly wouldn't consider SATCOM voice an alternative for maintaining

a 24 hour per day circuit which handled high volumes of traffic.

The point I made was that the government was using such circuits.
Nobody was interested in whether I had a better way or not--I was there
to run the existing circuit. Multipath propagation and the slow 75 baud
RTTY circuit were the unpleasant parts--the CW was fun.

Dave OH2/K8MN"

It looks as if Len has been propagating an untruth for a number of
years.
He's as far off base on the order wire yarn as he was on the Key
Officers listings.

Dave K8MN

Steve,

Let's put aside various claims and interpretations and take a look at what Mr. Anderson actually wrote back on December 2, 2002. Surely no reasonable person would object to shining the light of Logic and Truth upon the actual post in question.

It can be found easily by searching google with the words "lenover21 accuse ARRL fraud"

So here's a paragraph-by-paragraph analysis of the post which caused all the fuss. Let's see what the actual accusations are. The phrases "BEGIN QUOTE", "PAUSE QUOTE", "RESUME QUOTE" and "END QUOTE" are used to avoid any confusion as who wrote what.

BEGIN QUOTE:

Lines: 54

In article <20021201183714.00112.00000794@mb-fz.aol.com>, n2ey@aol.com (N2EY)
writes:

>In article <20021201133916.21441.00000449@mb-mc.aol.com>, j1aguiar@aol.com
>(J1aguiar) writes:

>Accusing the VECs of falsifying test results is pretty serious stuff, btw. Do
>you have any solid evidence?

VEC test sessions are NOT monitored by anyone else DURING
testing. All that is monitored is the FCC scanning over test
RESULTS sent to them by the VEC teams.

PAUSE QUOTE

Despite the unnecessary shouting, this first paragraph is just a restatement of the obvious. Note that FCC has not had any reservations about the testing of young children for amateur radio exams, nor of the VE session in question.

RESUME QUOTE:

Now go back to the famous/infamous ARRL news page that
showed two darling six-year-olds who were reported to have
"passed" written tests for Novice and Technician, respectively.
Now let any, repeat ANY, first-grade teacher look at the
written exam questions and decide for themselves whether
SIX YEAR OLDS can read those questions well enough to
answer even 70 percent of them. Just to READ them and
be able to choose any answer.

PAUSE QUOTE

The first sentence uses a scornful tone to question the legitimacy of the test results of the two children. Quite typical of the author.

The rest of the paragraph sets up a hypothetical person ("any, repeat ANY, first grade teacher") as a Final Authority on whether the children could read the test.

However, the proposed test is invalid. The question is not whether all six-year-olds could read the test, or whether typical six-year-olds could read the test, but whether the two particular six-year-olds who actually passed the test could read it. Without actually evaluating the two children in question, it's impossible to say whether they could read the test or not.

Also, not all six-year-olds are in first grade. Enrollment cutoff dates vary widely across the country. Here in Radnor Township, a child must be at least six years old before October 1 of the year that child is in first grade. Other school districts have much later cutoff dates, while some have earlier ones.

Most of all, many children today learn to read long before even entering the first grade.

RESUME QUOTE

If you say "yes they can, because...[for any reason]" then
you MUST acknowledge that (1) You don't have slightest
familiarity with six-year-olds' reading/writing comprehension;
or (2) You think anything labeled/stamped/categorized as
"ham radio material" is somehow "special" over and above
any other subject matter; or (3) Any child who is "involved" in
any way with amateur radio is somehow a "gifted child" or a
"child prodigy." All of them are nonsense, ridiculous because
of a way-too-strong identification (beyond rationality) with
amateur radio.

PAUSE QUOTE

Here, Mr. Anderson makes the classical logical error of assuming the conclusion. He presents the idea that no six-year-old could possibly read the test as an indisputable fact, without any proof whatsoever. He claims that anyone who disagrees with his assertion is simply wrong, but presents absolutely no proof of the assertion. The hypothetical first-grade teacher who is supposed to be the Final Authority on the reading skills of six-year-olds is never mentioned again. After all, someone might produce a first grade teacher who would say "Yes, some exceptional first graders could read that".

Also never mentioned is the fact that most people taking the test would probably have seen the questions and answers before, with plenty of time to learn unfamiliar words and phrases.

There DO exist six-year-olds with reading skills quite advanced for their biological age. I have known several who would have little trouble reading the Novice and Technician written exams, particularly if the content of the tests had been available to them ahead of time.

Reading comprehension is another matter. But the tests require only that the examinee select the correct answer, not an understanding of the question and/or answer. This is true regardless of the age or educational level of the examinee.

Again, the reading skills and comprehension levels of the children who actually took the tests are unknown to Mr. Anderson.

RESUME QUOTE

ARRL was being over-indulgent in that bit of "news" fluff and
the VEC group who did the alleged testing thought it all
cutesy-poo from a kindly grandfatherly feeling to kiddies
(picture included one of the VEC proctors, smiling and no
doubt feeling "proud" over the kiddies' "accomplishments."

PAUSE QUOTE

This paragraph is similar to the beginning of the second paragraph, using a scornful tone to question the legitimacy of the test results of the two children in question, the ARRL, and the VEC group who conducted the test. Yet no proof of any wrongdoing is presented by Mr. Anderson. He implies that the

tests could not have been legitimately passed by the children in question.

RESUME QUOTE

I accuse ARRL of very mild fraud on the part of condoning such
such things and hypocrisy on the implication of passing a ham
written exam as a sort of academic certificate. In the latter, if
barely-able-to-read-and-write six-year-olds can read and mark
with even reasonable comprehension, then the written exam is
a SHAM...even under pre-restructuring standards.

PAUSE QUOTE

Here's where Mr. Anderson accuses ARRL of "very mild fraud" and "hypocrisy" – again, without any proof whatsoever. Note also the baseless claim that ARRL presents the amateur written exam as some sort of academic certificate.

The "such such" mistake in the first sentence is how it appears in google.

And again he assumes that the six-year-olds in question are "barely-able-to-read-and-write" without any direct knowledge of their abilities.

Now, does an accusation of "very mild fraud" constitute an accusation of dishonesty? To anyone with comprehension of the meanings of the words "fraud" and "dishonesty", it is clear that an accusation of fraud, even "very mild" fraud, is, by definition, an accusation of dishonesty.

In the case of VE-administered license tests, either the tests were administered and passed in accordance with FCC rules, or they were not. If the tests in question were administered and passed in accordance with FCC rules, there is no fraud, deliberate falsification or dishonesty of any kind. If not, then the fraud is not "very mild". Mr. Riley Hollingsworth has made it clear, through enforcement actions, that VE-administered license tests must be in accordance with FCC rules. Accusing VEs and/or VECs of deliberate falsification without any evidence borders on libel.

In the last sentence, Mr. Anderson allows the possibility that the written tests may be a "SHAM" – but again offers no proof. Nor does he qualify or limit his earlier accusation of fraud. If such tests are a "SHAM" then they are so for all new amateurs, not just young ones.

RESUME QUOTE

No MORE evidence is needed...the evidence has already been
presented although sugar-coated with parental pride and the
usual propaganda of ARRL being all good things to US amateur
radio and never making mistakes or illegalities.

PAUSE QUOTE

Yet again, Mr. Anderson assumes his conclusion, with no proof. His whole argument is that no six-year-old could possibly read and pass the written tests for any amateur radio exam. He does not consider:

1) That six-year-olds with reading skills and other academic skills quite above the average for their age do exist, and often have accomplished quite amazing things for their age

2) That the written tests do not require comprehension of the material, just the selection of the correct answers.

3) That 2) has been true in the USA for more than 43 years, and that FCC has seen no problem with the system

4) That he has absolutely no information about the children or VEs in question, other than their age and license tests passed.

RESUME QUOTE

On the charge of deliberate FALSIFICATION for whatever reason,
ARRL VEC is GUILTY.

END QUOTE

Does an accusation of "deliberate FALSIFICATION" constitute an accusation of dishonesty? To anyone with comprehension of the meanings of the words "deliberate falsification" and "dishonesty", it is clear that an accusation of "deliberate falsification", is, by definition, an accusation of dishonesty.

So we have at least two claims of "dishonesty" by Mr. Anderson, supported by nothing but prejudice and faulty logic.

Note that Mr. Anderson acts as prosecutor, judge and jury, yet presents absolutely no proof whatsoever to support his claims. Note also that he does not add a signature to the post.

Why should anyone take Mr. Anderson or his comments seriously, given his proven track record of faulty logic, unsubstantiated claims of fraud and deliberate falsification against strangers, and general prejudice against ARRL and most radio amateurs?

But rather than responding to Mr. Anderson using pejoratives such as "liar" and "putz", let us give him the benefit of the doubt - even though he does not do so to the ARRL, those who oppose his views, nor to the young hams or VEs in question.

Perhaps Mr. Anderson simply does not remember what he wrote. Perhaps he does not comprehend the meaning of words like "fraud" and "dishonesty". Perhaps all of these claims and denials are just simple mistakes on his part. After all, his posts here are full of similar mistakes.

It is also clear that Mr. Anderson was not "joking" about any of his accusations. Although he routinely uses many "emoticons" or "smileys" in his posts, not a single one is used in the above post by him.

Of course no evidence will be forthcoming, Steve. He obviously has none to substantiate his claims.

> Uh huh.

Steve, there seems to be some confusion as to what Mr. Anderson has claimed in the past about getting an amateur radio license.

Let's put aside various claims and interpretations and take a look at what Mr. Anderson actually wrote back on January 19, 2000. Surely no reasonable person would object to shining the light of Logic and Truth upon the actual post in question.

It can be found easily by searching google with the words "lenof21 Extra" and the phrase "out of the box". Note that Mr. Anderson was using a different screen name back then. He has used "Nocwtest", "Averyfine", "Lenof21", "Lenover21", and "Averyfineman" (all AOL names) in the past 5 years for some reason. Of those, at least the last three are still in use.

So here's a paragraph-by-paragraph analysis of the post which caused all the fuss. Let's see what the actual accusations are. The phrases "BEGIN QUOTE", "PAUSE QUOTE", "RESUME QUOTE" and "END QUOTE" are used to avoid any confusion as who wrote what.

>
>Kim W5TIT

Bragging rights were codified in law with the so-called Incentive License plan and firmly cemented with the Vanity Call sub-parts of Part 97. US amateur radio didn't die then...but it CHANGED to make the bragging LEGAL. :-)

Kelly is having a fun time trying to make fun of others less skilled at morse code and a long time-in-grade as an extra. That's a form of bragging, a form of showing "superiority" over others...for the braggist's personal pleasure.

Such bragging does irritate me, yes, but only to a minor degree. What does and has bothered me for years, on and off, is the continual insistence that such qualities ("ham radio is all about CW on HF," and other Morse Myths) somehow "define" amateur radio's "experts." What really happened is that these old-timers managed to get into a position of influence at the ARRL and had the ARRL lobby the FCC to keep those "standards." They did that for years but the newer access to the government via the Internet, the dissemination of rule-change notices through the Internet has bypassed the ARRL. US radio amateurs no longer have to get information second-hand nor do they have to go through (by the League's insistence) their Section Director to "communicate their desires." Everyone, ham or non-ham, can go DIRECT to the FCC. The control of influence/lobbying of the FCC by the ARRL has eroded. This disturbs many who Believe in Big Brother to do the lobbying for them. Tough. The PUBLIC spoke and the FCC listened. 99-412 happened.

PAUSE QUOTE

The above is so full of factual errors which have been addressed elsewhere. Here's a quick summary:

- There were "incentive licensing" type systems in US amateur radio long before the changes of 1968-69. Among them were the old "ABC" system, and the six-class system enacted by the 1951 restructuring.

- The ARRL was not the only group proposing changes to the FCC. There were at least ten incentive licensing proposals submitted to the FCC that were given RM numbers

- The original ARRL proposal of 1963 did not involve any additional code testing for full priviliges.

- ARRL and others successfully opposed FCC's proposal to institute a fourth code test speed (16 wpm) in 1965.

- There was much debate and communication about the proposed incentive licensing changes. It was no surprise to anyone interested in amateur radio at the time.

- The changes put in place by incentive licensing included much more additional writen testing (2 tests, totalling 90-100 questions) than code testing (1 test, 20 wpm)

- FCC received over 6000 comments in regard to incentive licensing, most of them from individuals. This is almost triple the number of comments to 98-143, even though the US amateur radio community today is far larger than in the 1960s (~685,000 today, ~240,000 then). 1960s hams had no internet, no email, no ECFS system, yet they let their voices be heard at FCC.

These are just the high points. Mr. Anderson simply has his facts wrong.

--

Now for the most relevant quote:

RESUME QUOTE:

I'm going for Amateur Extra "out of the box." Maybe I'll
make it, maybe not. The personal point is irrelevant.

PAUSE QUOTE

Well, there you have it. Nothing ambiguous or qualified about it at all. Not a claim of what could be done, or might be done, but of what he was going to do.

Of course there is no time frame mentioned, and it is always possible he changed his mind in the three years since he wrote those words. But it is clear he DID say he was going to get the Extra class license.

RESUME QUOTE

What 99-412 really means is that there is no longer any
time-in-grade "seniority" nor any morsemanship that
indicates "superiority" of those bragextras. That applies
to EVERYONE who wants to try...without all the

artificialities of adhering to standards and practices of
the 1930s held in place by old men trying to relive
their youth by bravado and braggadoccio.

I'm another "old man," a retired professional in
radio-electronics engineering. Some of those tenured
old men of US ham radio don't seem to want anyone
with practical, professional and academic skill in radio
and electronics technology. They seem to fear those
who have industry-proven capabilities because that
doesn't fit into their standards...or because they are
insecure in not really knowing what goes on behind
the front-panel of their factory-built equipment. They
have difficulty in trying to put down those who know
practical theory so they try to make fun of them
instead...using their license paper as a "diploma"
and their HF CW tenure as some kind of "PhD" or
"professorship" of radio. Radio theory is somehow
imbued by spending hours working rare DX at high
rates, therefore some of those old men are "expert."
:-)

When 99-412 goes into real restructuring in April, it
won't change some of those tenured old men of US
ham radio. They will be bitter, boastful, and express
contempt of newcomers, some of which will have the
exact same government-granted rank/status/privilege
as all those old men who claimed they "worked" for
theirs. Human nature doesn't change. Neither have
they.

Len

END QUOTE

Basically a diatribe against nameless persons whom Mr. Anderson obviously has some sort of grudge against. He does not consider, however, that many of those he rails against are "radio electronics professionals". Note that none of the predictions made by him 3 years ago have come to pass. Amateur radio is not much different today than before restructuring.

I included the entire post simply to demonstrate that there was nothing in any of it to change the interpretation of the sentence

"I'm going for Amateur Extra "out of the box.""

It's clear to any reasonable person what that sentence means.

But rather than responding to Mr. Anderson using pejoratives such as "liar" and "putz", let us give him the benefit of the doubt - even though he does not do so to others. Perhaps Mr. Anderson simply does not remember what he wrote. Perhaps all of his denials are just simple mistakes on his part. After all, his posts here are full of similar mistakes, as shown in the above analysis.

So the question I would ask of you, Steve, is this: Why let Mr. Anderson's mistakes, errors, and insults bother you so much? Why should anyone take him or his comments seriously?

And why would anyone interested in the good of the ARS want him to make good on his intention?

I got one too! It's a general dipole with a tuner. Not as convenient. I take about ten seconds to change the tuner when I change bands. I don't understand why anyone would use one either. But some do.

Well, "there you have it, Carl..." :-)

"Nobody" is on call or works as long as they are ordered, not
military members, not police or sheriff's deputies, not firemen
or paramedics (of professional fire departments), or Real MDs
on ER duty in hospitals or those on-call after office hours. Not
utility workers, either, like those who repaired the damage to
electric power or gas and water lines after the Loma Prieta or
Northridge earthquakes out here.

"NOBODY works 24/7" according to Heil. None. Zip. Nada.

Sigh...must have been cushy duty in some State Deptartment
postings or in USAF units "that worked with NASA." :-)

It's difficult but it can be done. :-) :-) :-)

All one has to do is "work hard at it" every day...practice,
practice, practice...

>> Amateur radio is a fun hobby, a recreation.
>
>How would you know?

I've read the "official" ARRL output on amateur radio. :-)

Of course, according to Heil, Robeson, Miccolis, and all
the PCTAs, it must be done in an "official" manner,
always working HF, CW whenever possible, and observing
all DX within sight and hearing.
- US amateur service general order #1

>How time flies. If you want to get is right, that has been about five
>years ago. I was still working in Helsinki at the time. My statement
>was as correct then as it is now.

Tell us more about Guinea-Bisseau and how it compares to
a Scandinavian country. Does the US State Department radio
in Finland use CW as an order-wire on RTTY circuits too?

>Whoa! You're treading on some pretty thin ice there, Leonard. What was
>that part about rewriting? How about that character assassination
>stuff?

Yeah, how about it? You missed that wonderful AOL home
page of Robeson's, didn't you? Poor baby.

Was there thin ice in Guinea-Bisseau?

>Anderson has no credentials in psychology nor is he a medical doctor.

I don't pretend to be one...but it doesn't take any degree except about 98.6 of them on the Fahrenheit scale to see Obsession and Hate-Rage in Robeson's actions in here for all the readers to see.

For "credentials" in psychology, I can call on my own consultant, my wife, who has two Masters degrees (both from University of Illinois) with one of those being in Social Work. She was a licensed private counselor in the states of Illinois and Washington for a number of years. She has Robeson...and you as well...tagged, labeled, pickled, and put on the shelf as classic examples of dysfunction.

No problem. Both "Steam's" and your own behavior can be seen with passing grades from two semesters of psychology. [a requirement in California undergraduate studies in the 1960s]

Steam Robeson likes to put on like he was "almost" an MD, "expert" in nearly everything medical. Some nurses get like that away from the hospital. Once at work the are submissive and follow orders of Real MDs meekly. That might be one of Robeson's frustrations to explain his behavior in here.

Yourself, on the other hand, imply you are the "expert" in radio...not just amateur radio, but in ALL radio. You "took credit" for the clever innovation of using CW as the order-wire of a State Department RTTY circuit (later changing that to "official State Department Procedure"). Now that sort of "innovation" is neither clever nor good practice, hasn't been done by any of the other government or commercial HF communications folks. QED...you tried a snow-job on the others and got caught at it, now you can't forget it or "lose face" in public due to your own personal whatevers.

Not my problem, colonel. I'm not your therapist. Doesn't take any credential to see what you're doing in here. :-)

>> yerself out, go work yer dummy load.
>
>Ah! You called it a dummy load. Does your dummy load radiate as
>well?
>
>Some engineer you are.

Kellie is a credentialled MECHANICAL engineer.

I'm sure that Kellie could design a sound mechanical
support for an antenna that might withstand the forces
of nature...such as corrosion from hoagie drippings. :-)

From thereon though, the EM fields and waves in the
conductors of antennas...or the influence of conducting
portions of the antenna support on antenna patterns...
is NOT a topic. The antenna TYPE, that is, the NAME

must be "officially" sanctioned, approved, and published
in the "official" ARRL antenna book. Without that, no
strange, unknown antenna can possibly work. :-)

>I wonder if N2EY's dummy load radiates as well. Some school, right?
>

> Not at all. I would like to see Lennie silenced becasue he has lied
> repeatedly and makes outrageous and unsupported claims against Amateur Radio as
> a whole.

You have lied repeatedly.

Len's opinion of the cult of amateur radio isn't far off the mark.

> You support no code, and I have no argument with that. So does Carl and
> several others. Do you see me responding to them like I do Lennie? No.

YES!

I've given a long list of the people that you incessantly badger
whenever they might come on to the group.

It's
> because, like it or not, they express THIER opinions without lying or making
> easily disproved assertions about Amateur Radio, the ARRL in general or certain
> Hams in particular., and they show me the same courtesy.

Uphill both ways.

> >And what of your endless spamming?
>
> So people should just let Lennie lie uncontested?

We're not talking about "people." We're talking about your
unreasoned, eyes rolled back, rantings.

Get over it.

> >They ought to be. This group is supposed to be about that.
>
> That argument is over with, Brian. There are other IMMEDIATE issues that
> need to be and should be addressed, but they aren't. I ahve introduced and
> reintorduced them, but they fall on deaf ears, so it shall be...I am not

> another "Vipul" who will damn all Amateur Radio because it won't meet MY needs.

Do you believe that the FCC, through a body of rules titled "Part 97"
governs amateur radio?

> Here's some facts:
>
> (1) The FCC has so far refused to revisit any further petitions on the
> Morse Code testing issue until it is addressed in WRC-03.

Is this one of your "immediate" issues?

I wish they would revisit it.

If it is unnecessary to obey START treaty with Russia...
If it is unnecessary to form a coalition to bomb Iraq...

We ought to be able to eliminate the code exam for free American
amateurs.

> (2) Most major western powers and most of the rest of the world has
> already moved to a minimalist position on Code testing, dropping it to 5WPM or
> "code recognition" tests. Many of THOSE countries have stated that they will
> drop code testing when the ITU treaty is ammended to drop it.

Wow. Forward thinkers. (30 years late)

> (3) The only major Amateur Radio organization in the United States has
> dropped it's own long-standing support of Code testing. Therefore with the
> exception of the occassional anonymous "No Code=No Ham" hold outs, there is no
> organized support for continued code testing.

I disagree, but does there need to be organized support to maintain an
unnecessary and arbitrary requirement?

> Do I like it? Not particularly. But I accept it and will try to
> encourage new Hams to learn the Code even after ITU deletes or ammends S25.5.

Our government may take years to eliminate the code exam. Unless they
allow the VEC to misinterpret Part 97 and just stop testing.

> >Your zeal only exposes you for what you are.
>
> Intolerant of the lying and deceitful?

M-o-v-e On!

> >> Have you seen him provide one iota of "evidence" about ARRL
> >> "dishonesty"...?!?!
> >
> >Ask him if he has one iota of evidence concerning Watergate,
> >Iran-Contra, Savings and Loan scams, Monica-gate, or Dangling Chads.
>
> None of those are in discussion here, now are they?

I have no factual evidence about how many times a day brakes stop
cars, either.

None!

> >He sure does pull your strings.
>
> Liars always do.
>
> >Like now?
>
> If the shoe fits, Brian...
>
> > Like it or not, you
> >keep falling into the characature mold that Len has described. And I
> >know you don't like it. Sorry.
>
> Sorry for what? Lennie insists on some "lodge hall" mentality,

Yup.

insists
> that Amateur Radio does NOT provide a public service,

So, he's wrong.

and has made countless
> assertions that are untrue and proven false with ease.

So do you.

> So he has proved....what?

He's said that we're full of OF's that cling to the past. If you
can't see that, then you're part of the problem.

Brian

**

RESCUE RADIO: HAMS HELP IN FIRE COMMUNICATIONS IN VK3 WIKLDFIRE

Hams in down-under are hard at work assisting in emergency communications as widfire rage in several Australian states. Q-News Graham Kemp, VK4BB, is in Brisbane with the latest:

--
Audio report only. No text. Hear it at www.arnewsline.org
--

(Q-News)

**

RESCUE RADIO: REPEATER APPEARS LOST IN VK1 WILDFIRE

Meantime there is some good news regarding hams living in and around the city of Canberra. They are all reportedly O-K, but one of their local repeaters may have been lost in a widlfire thats has been sweeping the area. Phil Longworth VK1ZPL who is the WICEN Coordinator Canberra:

--

Longworth: "We have a couple of repeaters around town. One which is actually located at the NASA site down at Cape Mc Villa. We haven't heard it since Saturday. The scouts cannot get close to there because they have lost a lot of infrastructure. So we are assuming that we have probably suffered some damage."

--

The repeater being referred to is VK1RAC. So far radio operators have not been called in the Canberra area because there have be no major failures in the nations telecommunications system. But hams are standing by even though they may have to do without one major repeater.

(Q-News)

**

RESCUE RADIO: US HAMS NOT NEEDED IN MEXICAN QUAKE

Mexico's telecommunications system is working properly following a major earthquake and communications assistance from the United States is not needed. The quake hit in Nortth-West Mexicio. It registered 7.6 on the Richter scale, toppled dozens of homes, killed at least 24 people and injuring at about 175. And while telephone service in several remote areas was knocked out for a time, the Mexican government got it quickly restored. Also, Mexico's own ham radio community has decasdes of experience making outside aid not necessary in many cases.

Here in the United States, Gordon West, WB6NOA, has been monitoring the situation from his home in Costa Mesa Claifornia. Thats about 150 miles North of where the quake hit. And hes been taklking to hams in the area and confirms that United States hams going to assist are just not needed:

--

West: "In communiocating with the maritime mobile operators near Manzinello Mexico, many ofd the mariners rowed ashore and asked whether or not their ham radio gear on 40 meters might help relay messages back to the U.S.A. The villagers on shore evidently indicated that their communications were still up, and, that while they apreciated the boaters going ashore to ask for relays, none were needed.

The mariners did indicate that they felt a slight tidal movement. That was reported the following morning on many of the Baja maritime mobile nets."

--

West says that immediately after the quake hit he began monitoring the various frequencies known to be usaed by Mexican hams for emergencies on 40 and 75 meters. West says that not a signal on the air indicated any apparent need for mutual communications aid from the United States. Don. (ARNewsline™)

**

SPECTRUM ALLOCATIONS: FCC ON WRC-03 PROPOSALS

Back here in the U-S, an ARRL Bulletin says that the FCC is seeking comments on draft recommendations the World Radiocommunication Conference Advisory Committee adopted January 8th. Amateur Radio Newsline's Ken Locke, N8PJN, has more details:

--

The FCC's International Bureau says that based on its initial review of the recommendations, it tentatively concludes that it can generally

support the proposals recommended by the W-R-C 03 Advisory Committee. And if adopted, United States delegations will use the proposals at bilateral, regional and international meetings.

One agenda item of interest to hams involves examining the adequacy of the frequency allocations for High Frequency broadcasting in the vicinity of 4 to 10 MHz. The FCC also has draft proposals developed by Executive Branch agencies, and the agency is requesting comments on those as well.

The Public Notice was released January 15th. The deadline for comments is January 31st. Complete texts of draft proposals are available via the FCC's WRC 03 Web site. You reach it from a link at www.fcc.gov.

For the Amateur Radio Newsline, I'm Ken Locke, N8PJN.

--

Comments may be filed via e-mail to wrc03@fcc.gov. You can also submit them by mail the Office of the Secretary, Federal Communications Commission, 445 12th Street, SW, Washington, DC 20554. (ARRL)

EMERGING TECHNOLOGY: PLC MAY BE COMING TO THE USA

P-L-C could be coming to the United States -- but not right away. This according to a top official at the FCC. Amateur Radio Newsline's Bruce Tennant, K6PZW, is here with the details:

--

P-L-C stands for Powerline Communications and the idea is to use the same wires that bring electricity to your home as a pathway for high-speed Internet access. And as previously reported, in nations where P-L-C has been evaluated or approved it has caused moderate to severe degradation to a good portion of the electromagnetic spectrum. In fact,. several nations have decided against implementing P-L-C even though it holds the promise of becoming a less expensive alternative to cable modems and D-S-L telephone lines as a way to get broadband service.

And the FCC appears to be optimistic about P-L-C. On Wednesday January 15th, Edmond Thomas, chief of the Federal Communications Commission's Office of Engineering and Technology said companies developing the

technology have overcome many hurdles in the past year.

The FCC has been studying P-L-C technology for several months and Thomas says that the agency will pay more attention to it this year. He notes that there are no regulations that prohibit the technology, but the agency is concerned that Internet data transmissions carried over power lines could radiate signals inside and outside the home that could cause interference.

And Thomas indicates that the widespread introduction of Powerline Communications wont happen very soon. He says that the FCC wants to be certain P-L-C is not going to cause problems to your TV. And that's certainly good news for all communications services including Amateur Radio.

Reporting from Los Angeles, I'm Bruce Tennant, K6PZW.

--

Obviously this is an emerging technology that can impact negatively on ham radio and will have to be watched. (Published reports)

**

ENFORCEMENT: FCC CANCELS EXPERIMENTAL LICENSE WC2XZV

The FCC has cancelled an experimental license to California company because the agency says its being used for other purposes. According to the CGC Communicator, the FCC cancelled experimental authorization of WC2XZV after Enforcement Bureau monitoring confirmed the operation.

In a short letter dated January 17th, the Commission stated that the California station's emissions were not in compliance with the terms of its experimental radio license. But a story on recnet.com says a lot more. It says that that there were published reports of an alleged pirate station operating in the Antelope Valley area prior to the experimental license grant. The station was operating on 104.7 MHz and identifying as Frequency Radio with its website at www.1047.fm A check of the website makes no mention of the experimental license or the FCC action to cancel it. Acopy of the FCC's letter is posted in cyberspace at www.recnet.com/fcc/wc2xzv_cancel.pdf (CGC Communicator)

**
NAMES IN THE NEWS: MITNICK FREE TO REJOIN THE WWW

Former computer hacker Kevin David Mitnick, N6NHG, has completed his probation and is now free to once again use a computer and surf the web. After being released from prison three years ago on probation, the Mitnick had been barred from contact with computers until last year. He was not allowed to access the Internet until this his probation ended Monday January 20th.

But simply roaming the web may not what Mitnick has in mind. Since his release he has turned his efforts to becoming a consultant on computer

and Internet security issues. He hosted a radio program on Los Angeles talk station KFI, has written a book and has even testified before a congressional committee on ways to make computing more secure.

Only a few weeks ago the FCC agreed to permit him to renew his Amateur Radio license. The Administrative Law Judge hearing the case said that Mitnick was rehabilitated and would likely adhere to all of the agency's rules. And in a recent interview with the Los Angeles Times newspaper, Mitnick said - quote : "The truth is, I learned my lesson."

Kevin Mitnick, N6NHG, also learned a lot about computers and the world-wide-web from his days of hacking. Now he appears to want to use this knowledge for the benefit of all in society. (ARNewline™ from published news stories)

**

PROMOTING THE HOBBY: "AMATEUR RADIO TODAY" - THE VIDEO

The most trusted man in America has lent his name and callsign in support of the hobby. This as retired CBS newsman Walter Cronkite, KB2GSD, tells the story of hobby's public service efforts to the non-ham public in a new ARRL produced video titled Amateur Radio Today.

Cronkite narrates the program from his office in New York City from a script developed by Alan Kaul, W6RCL. Kaul is the West Coast Producer of NBC Nightly News and a former anchor here on Amateur Radio Newsline.

Amateur Radio Today was directed by Dave Bell, W6AQ, who is responsible for many ham radio films including the all-time classic "The Hams Wide World." Bell, Kaul, Bill Baker, W1BKR, of PBS and Bill Pasternak, WA6ITF served the co-producers. The show was edited at Suite Sixteen Post in Burbank California with Keith Glispie, WA6TFD, at the controls of the all digital Quantel Edit Box. But its really Walter Cronkite that takes you on a fast-paced six minute trip into the very soul of ham radio.

The only legitimate authorized source of Amateur Radio Today is the American Radio Relay League which holds the copyright. It will be available on video CD in the very near future and -- eventually -- VHS tape. Visit www.arrl.org/catalog and order item number 8861 (ARRL, ARNewsline™)

**

HAM RADIO VIDEO: WRTC 2002 VIDEO NOW AVAILABLE

Another video is aleady being called the best ham radio sports show ever to hit the street. This with the announcement that the official video of the Amateur Radio Olympics 2002 is now available on DVD and VHS.

The world premier was held in Helsinki Finland on January 18th before an overflow crowd at the Contest Club Finland meeting. Unlike previous

ham radio videos, this one is produced from a 100% "pro-sports" perspective.

In order to capture as much of the action as possible, three camera crews taped as many teams and events as they could during the actual 24 hour competition. Supporting all this great footage are high-end 3D graphics, scoreboards, top-ten boxes, team profiles, and everything else that you might expect when watching a professional sports event on television. And the production is even narrated by one of ESPN's top sportscasters

The program's total running time is 60 minutes. The DVD version contains lots of extra features like full score breakdowns for each team, continental line-ups, competitor rulebook, and even all the past W-R-T-C scores dating back to 1990.

If you've ever wanted to watch the worlds top radiosports teams in action, now is your chance. Copies are available for a nominal fee from the website: http://home1.pacific.net.sg/~jamesb (WRTC)

**

RESCUE RADIO: FISHING BOAT CREW DISAPPEARS BUT CELL PHONE TURNS UP IN INDONESIA

A strange story from Taipei. A mobile telephone belonging to the missing chief engineer of a ship found abandoned off Australia has been used to make more than 80 calls from Indonesia. Australian police said they are baffled by the discovery of a fishing boat full of rotting fish and its lifeboats in tact, but no crew. News reports say that the boat was found drifting off the remote northwest Australian coast. The phone calls from Indonesia add to the mystery of what happened to the missing crew. (PacificRimOnline)

**

COMMUNICATIONS MAGAZINES: POPTRONICS CEASES PUBLIC ATION

Popular Electronics -- better known as Poptronics Magazine is the latest hobby electronics publication to fail. This with the announcement that its publisher Gernsback Publications is no longer in operation.

Gernsback was in the publishing business for 94 years. The January 2003 issue was the last. Negotiations are reportedly under way to provide an alternative publication to Popular Electronics current subscribers. (W8HDU)

**

HAM LICENSING HELP: OH-KY-IN OFFERING HAM CLASSES

If you live in Ohio, Kentucky or Indiana and have a friend wanting to become a ham, this is for you. The OH-KY-IN Amateur Radio Society will offer ham radio license classes in the Cincinnati, Ohio area. Training

is scheduled to begin on Thursday evening, February 20th.. Training will cover Technician through Extra grades along with Morse instruction to 5 words per minute. At the conclusion of the ten week course, Amateur exams will be offered. More information is in cyberspace at www.ohkyin.com. (OK-KY-IN release)

**

WITH THE HANDI HAMS: THE CALIFORNIA CAMP

The Handi Hams California Radio Camp is the week of March 2 through 9th. This years special guest speakers include Bob Zeida N1BLF, Gordon West WB6NOA and Bill Pasternak WA6ITF.

Also, those of you contacting camp special event station W0EQO will be eligable for a special QSL. More information about the camp and the station is on the web at www.handiham.org (HandiHams)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

CONVENTIONS AMD HAMFESTS: THE MIAMI TROPICAL HAMBOREE

The 2003 convention seasons gets off to a bang the 1st weekend in February. Thats when the 43rd annual Tropical Hamboree and ARRL Florida State Convention will be held in at the Fair Expo Center in Miami Florida.

The Tropical Hamboree is truly a fun filled convention with loads of new and used radio gear for sale along with a host of terrific programs and top notch speakers.

The hours of operation are 9 am to 5 pm Saturday February 1st and 9 am to 4 pm on Sunday the 2nd. For everything you might want to know about this years Tropical Hamboree take your web browswer over to www.hamboree.org (Tropical Hamboree)

**

HAM RADIO ASSISTS: THE MIAMI MARATHON

Another activity scheduled for the same weekend in the same place is the 2003 Miami Marathon. Sponsored by Toyota and The National Diabeties Association, the Miami Marathon is a 26 mile foot race starting at the famed Coconut Grove, across Biscayne Bay, to Miami Beach and back again

to Miami.

The date for this event is Sunday February 2nd. Ben Nemser WA4DZS, owner of Nemal International Electronics is coordinating the amateur radio communications. His assistant, all the way from New York City is none other than that well-known 'marathon man', and former ARRL 1st Vice President Steve Mendelsohn, W2ML.

With two major events involving ham radio the same weekend, its going to be a major challenge for the South Florida ham community. Its also looks to be a very memorable weekend in Miami as well. (Tropical Hamboree)

**

TECHNOLOGY: EIGHTY ONE MILLION PEOPLE WATCH FREE TV

According to the National Association of Broadcasters, approximately eighty-one million television sets in the U.S. receive programming exclusively from free, over-the-air TV stations. In comments filed with the Federal Communications Commission, the NAB noted that while the total number of television sets in the U.S. is 267 million that more than three out of every ten TV sets relies exclusively on "free TV" for programming. This means that the TV set is not hooked up to cable, satellite or any other subscription TV service.

Other figures noted by the NAB say that twenty-five percent of all cable and satellite homes have at least one TV set in the household that receives signals solely from free TV. Also, 24 percent of African-American and 32 percent of Hispanic households rely exclusively on free TV for their television viewing.

The National Association of Broadcasters analysis was provided to the FCC as part of the Commission's "Annual Assessment of the Status of Competition in the Market for the Delivery of Video Programming." The N-A-B says that its comments demonstrate the considerable extent to which consumers still depend on over-the-air broadcast television signals. (NAB)

**

INTERNATIONAL - IARU

On the international scene, the Radio Society of Great Britain passes along word that the national amateur radio societies of Cameroon and Macau have been admitted to the International Amateur Radio Union. A-R-T-J in Cameroon was formed in 1998 and has 14 members, seven of whom are licensed. Macau's ARM was founded in 1992 and now has 85 members. Both societies were inducted as of last December the 9th. (RSGB)

**

ON THE AIR: AO-40 QSO PARTY

The operating period for the first AO-40 QSO Party has been extended to 4 days in order to give more operating windows to Amateur stations world wide. The QSO Party will begin at 0000 UTC on the 24th of January and conclude at 2400 UTC on January 27th. Currently stations from over 30 countries have indicated their intention to participate in this years event. (ANS)

**

DX

In DX, a team of operators that includes SM0BSO, SM0LQB and SM1TDE will operate from the QTH of JW5E on Spetsbergen between February 24th and March 1st. Look for them on 160 through 2 meters running CW, SSB, RTTY as well as SSTV and other soundcard modes. QSL to each operators home call direct or via the bureau. (GB2RS)

**

THAT FINAL ITEM: SPANNING THE ATLANTIC

And finally this week, the story of history being celebrated. Of the earliest days of radio being commemorated by the people of the 21st century. And those who were there said it was like the past catching up with the future on a cold day at Cape Cod Massachusetts.

The event was the 100th celebration of the first ever radio transmission from the United States being received in Europe. It was made by radio pioneer Guglielmo Marconi in 1903. And it was his daughter, Princess Elettra Marconi, who lent her voice to begin the 100th anniversary celebration of the first trans-atlantic radio message. A message that probably sounded something like this:

--
Audio Here
--

That sound was supplied by Bob Doherty, K1VV. He along with members of the Marconi Radio Club and Marconi Cape Cod Memorial Radio Club were the people behind KM1CC. That was the on-the-air celebration of the two club's namesake making the first wireless transmission to Europe. And quite an affair it was.

Princess Elettera Marconi began the festivities in a brief contact with Ken Bowersox, KD5KBP. That's Commander Ken Bowersox on board the International Space Station. A bit later, Bowersox spoke with Cape Cod area school children who asked questions about life on-orbit. Both contacts were made possible by ARISS -- Amateur Radio on board the International Space Station.

The January 18, 1903 contact by Guglielmo Marconi used an early form of hand sent code to span the Atlantic. A short time later Marconi predicted that mans voice would eventually span the globe using wireless. Now, precisely a hundred years later on a frigid January 18, 2003. Marconi's daughter returned to near the scene of that first

contact and got to speak to a man in space. If he were alive today, Guglielmo Marconi would justly be proud. (K1VV)

Being on call is not working 24/7. Military members are given opportunities to sleep. None of the people described work round the clock for a week--none of them.

> "NOBODY works 24/7" according to Heil. None. Zip. Nada.
>
> Sigh...must have been cushy duty in some State Deptartment
> postings or in USAF units "that worked with NASA." :-)

Don't you have enough egg on your face for a single week? I'll settle for a single example of someone who is actually working 24 hours per day, seven days per week. This excludes someone who works the occasional long stretch. Come up with someone who has actually put in 148 continuous hours.

Dave K8MN

> all the readers to see.

I could have sworn you were just pretending to be one, despite your
present claim to the contrary. What temperature do your Obsession and
Hate-Rage posts generate?

> For "credentials" in psychology, I can call on my own

What does she have to say about your antics?

> No problem. Both "Steam's" and your own behavior can
> be seen with passing grades from two semesters of
> psychology. [a requirement in California undergraduate
> studies in the 1960s]

But you aren't a licensed psychologist any more than you are a licensed
radio amateur. You can't practice either without a license.

> Steam Robeson likes to put on like he was "almost" an MD,
> "expert" in nearly everything medical. Some nurses get like
> that away from the hospital. Once at work the are submissive
> and follow orders of Real MDs meekly. That might be one of
> Robeson's frustrations to explain his behavior in here.

Show your wife the above paragraph and ask her professional opinion of
someone who would continue posting such unsubstantiated stuff. Explain
to her that you and not some adolescent wrote it.

> Yourself, on the other hand, imply you are the "expert" in
> radio...not just amateur radio, but in ALL radio.

Such a claim has never been made by me.

> You "took
> credit" for the clever innovation of using CW as the order-
> wire of a State Department RTTY circuit (later changing that
> to "official State Department Procedure"). Now that sort of

> communications folks. QED...you tried a snow-job on the
> others and got caught at it, now you can't forget it or "lose
> face" in public due to your own personal whatevers.

All of your untruthful claims have been repeatedly and strongly refuted.
In fact, my original statements from five years back have just been
quoted here to show you for what you are.

> Not my problem, colonel.

No, your current problems are explaining how you've made the untruthful
statements about things like use of CW as an order wire and the absence
of my name in State's "Key Officers" lists in the face of irrefutable
proof to the contrary.

> I'm not your therapist.

No kidding. You aren't anyone's therapist.

> Doesn't take
> any credential to see what you're doing in here. :-)

No, it takes no credentials to see that I'm revealing you to be a teller
of untruths. You are just as described by N2EY.

Now it is obvious that exams are NOT monitored? Unfrigginbelievable;
what unpalatable concessions are made in the effort to hang Len.

You might want to clue in buddy Dick Carrol/W0EX. He thinks otherwise
and you had -ample- opportunity to correct him at the time.

I'll spell it out very clearly: PCTA Double Standard.

Brian

I am beginning to wonder exactly what expertise they have left
anymore. I work in a component of DOD, and they called our office,
requesting assistance with a signal they were tracking. I denied the
request, whereupon the FCC official flew into a rage. sure nuff,
they had one of their higher ups call one of my higher ups, and got the
same answer I gave them, "no."

I think Jim, N2EY's post's in another thread that exactly quoted
(including headers) Lennie saying what Lennie DISclaims saying pretty well
defeats any claims Lennie may have hoped to hold on to of "character
assassination".

And I think in light of those posts (and reams of others) pretty well
quells any claims Lennie may make of allegedly being libelled.

Whew!

She still with you? She's either very compassionate, or has a high tolerance for liars and creeps.

She must use industrial strength "Janitor in a Drum" to get the stench off.

>She has
> Robeson...and you as well...tagged, labeled, pickled, and
> put on the shelf as classic examples of dysfunction.

Perhaps you'd not mind then if we run off copies of the posts where you make allegations agains Amateur Radio, say you're going to do something and then not do it, and use your OWN adjectives like "jack-booted thug", "Nazi", elitist", etc.

But then...I have to ask myself...What kind of person WOULD be married to a creep like you and I find the answers are not very flattering.

And I can only imagine what kind of "psych" professional your spouse must be that she can't make an objective observation of your OWN "dysfunction".

Your wife thinks it's "acceptable" for her husband to make tens-of-thousands of posts to an online newsgroup for a radio service in which he has no vested interest? She doesn't find THAT "obsessive" or "dysfunctional"...?!?!

If not, she's as incompetent in HER alleged profesion as you are in yours.

>
>Do you believe that the FCC, through a body of rules titled "Part 97"
>governs amateur radio?

Where in the blue blazes did you get a questuion like that in response to the quoted paragraph, Brian?

The FCC's jurisdiction over Amateur Radio has NEVER been in contest. This is some dodge that your buddy like to try and trun from time to time.

No one in this forum has ever "denied", "disclaimed", alluded to" or otherwise attempted to suggest that the FCC is NOT the governing agency for civil radio in the United States.

I DARE you to provide ONE quote where ANYONE in this forum has stated otherwise.

>We ought to be able to eliminate the code exam for free American
>amateurs.

There are Amateurs imprisoned over Morse Code? I know Flippo and Burton are in jail for QRMing and unlicensed operation, but WHO is in jail over Code?

>I disagree, but does there need to be organized support to maintain an
>unnecessary and arbitrary requirement?

Please cite for me some known law that is enforced WITHOUT "organized support", Brain.

I can't think of a single law that gets enacted and enforced WITHOUT "organized support", and I certainly can't think of any law that ever got revoked or deleted without "organized support". The Bill of Rights bears witness to same, espeicially the 18th and 21st amendments.

>Our government may take years to eliminate the code exam.

Brian...copy this post, including headers, and save it.

I am willing to wager $100.00 US Dollars (one hundred), that the Federal Communications Commission shall, either on thier own volition or acting on a duly submitted petition, within 180 days of the ratification of any changes to ITU S25.5, delete Morse Code testing as a requirement for ANY class of Amateur Radio license in the United States.

>Unless they
>allow the VEC to misinterpret Part 97 and just stop testing.

How can they "misinterpret" Part 97?

What part of Part 97 as it presently exists lends itself to "misinterpret(ation)" such that VE's could even remotely consider NOT complying with examinations for Element 1?

>> >Your zeal only exposes you for what you are.

>> that Amateur Radio does NOT provide a public service,
>

>So, he's wrong.

That's what I've been TRYING to tell you!

>and has made countless
>> assertions that are untrue and proven false with ease.
>
>So do you.

Quotes, please...

>> So he has proved....what?
>
>He's said that we're full of OF's that cling to the past. If you
>can't see that, then you're part of the problem.

Let's see...."clings to the past"...

Hmmmm....I certainly AM active on CW on HF...But Wait! There's More!

EME...(building a station)...airborne telemetery for DASH surveillence,
mentoring, ATV...

Whew...Could go on, but why...??? I've helped dozens of NEW hams get on
the air, almost all of which have been Post 1991 and post "Restructuring"
licensees.

No one in any club I belong to (three) even remotely supports "clinging to
the past". Nothing I read in ANY periodical suggests that Amateur Radio
"cling to the past" other than the usual historical interest expressed by ANY
group in it's development. Every major periodical is ripe with new technology
and techniques articles.

Nothing, Brian...

Now, Please provide the requested verifications of YOUR assertions of lies
on my part.

We'll wait right here.

Steve, K4YZ

Who knows what he was running? A "3-30 MHz" WBFD in the clear 100+
feet above the prairie will prolly do a half-decent job on 40 meters,
'specially if fed enough suds. If the thing is only 10% efficient, it
just brings the 1500 W boys down to barefoot-and-a-dipole level.
>
> Did I get that right Chief? Momback Good Buddy.

Remember, it was 40 on a good evening, and Hans is in the midwest.
Heck, I work the West Coast with my low inverted V and 100 homebrew

watts under those conditions - on 80 meters.

--

"T2FD" stands for "tilted, terminated, folded dipole". Originally meant to be a nondirectional, frequency-insensitive RECEIVING antenna, fed with balanced line. Really cutting-edge stuff a half-century ago - hook one to yer R-390 and there's no need to fool with the antenna trimmer. Or run the T2FD into a multichannel "antenna coupler" (which most hams would call an "active splitter" and feed a bank of HF RXs tuned to different freqs. No adjustment required.

The interesting thing is that some folks are of the mindset that "if the govt. and military use it, it MUST be the best". They disregard the differences between the govt's needs and resources vs. hams. (You see that sort of thinking all the time here on rrap). Manufacturer's advertising hype doesn't help, either.

If some ham with more bucks than brains gives me a hard time about the T2FD/WBFD, I don't argue anymore.

>
> Is there another amateur radio society in the USA that provides even 1% of
the
> services ARRl provides to the amateur radio community?

I am both an ARRL member and a volunteer in ARRL field activities (LGL).
I am also a director of NCI. Frankly, I don't see any value to this
discussion
since it is meaningless in the ongoing policy discussions and has been for
some time.

Turns out the FCC listens to ARRL, NCI and anyone else that has anything
credible to say...and in the end the FCC decides what to do.
Hell, it works for me...not to mention that NCI's track record
with seeing NCI viewpoints taken by the FCC has been pretty
darn good.

Cheers,
Bill K2UNK

1224. Re: Claims Of Dishonesty

of
>the obvious. Note that FCC has not had any reservations about the testing of

>young children for amateur radio exams, nor of the VE session in question.

Obvious NON-criticsm. The FCC does NOT have any age
limit on US amateur licensee applicants.

Is pointing out SUSPICIOUS action "charges?" Oh, my!

>RESUME QUOTE:
>

> be able to choose any answer.
>
>PAUSE QUOTE
>
>The first sentence uses a scornful tone to question the legitimacy of the test
>results of the two children. Quite typical of the author.

Oh! Oh! The CRIME!

Mr. Anderson "uses a scornful tone!" Oh! Oh!

>The rest of the paragraph sets up a hypothetical person ("any, repeat ANY,
>first grade teacher") as a Final Authority on whether the children could read
>the test.

Jimmie has scorn on the cob...

>However, the proposed test is invalid. The question is not whether all
>six-year-olds could read the test, or whether typical six-year-olds could read
>the test, but whether the two particular six-year-olds who actually passed the
>test could read it. Without actually evaluating the two children in question,
>it's impossible to say whether they could read the test or not.

Counselor! I hear "scorn" in the critique! Quick, to Google!

Wanna-be pediatrics expert Jimmie Miccolis seems to think
that ALL six-year-olds have full comprehension of reading
along with full judgement of responsibility at that age.

I would assume that nearly all parents of THEIR children
would claim that...it is the norm in our society...but the
newsgroup doesn't know if Miccolis is a parent of any kind
or a pediatrician or where he works or what he does in any
detail. He DOES feel free to "hear scorn" on a screen
(must have a remarkable computer transducer in there)
and critique others who don't Have The Right Attitude On
Ham Radio. <shrug>

>Also, not all six-year-olds are in first grade. Enrollment cutoff dates vary
>widely across the country. Here in Radnor Township, a child must be at least
>six years old before October 1 of the year that child is in first grade.
Other
>school districts have much later cutoff dates, while some have earlier ones.

Radnor is The Land Of Gifted Children. Ok, we've established
that. "Other places have different things..." Echh, statement
of the obvious, something which Jimmie abhored elsewhere. :-)

>Most of all, many children today learn to read long before even entering the
>first grade.

Of course. I read and critiqued "War And Peace." In the original
Russian. Didn't Jimmie?

Jimmie didn't get his Ham license until 14. Was he retarded?
Living in another county? Excuse me, TOWNSHIP...

>RESUME QUOTE
>
> If you say "yes they can, because...[for any reason]" then
> you MUST acknowledge that (1) You don't have slightest
> familiarity with six-year-olds' reading/writing comprehension;

> "ham radio material" is somehow "special" over and above
> any other subject matter; or (3) Any child who is "involved" in
> any way with amateur radio is somehow a "gifted child" or a
> "child prodigy." All of them are nonsense, ridiculous because
> of a way-too-strong identification (beyond rationality) with
> amateur radio.
>
>PAUSE QUOTE
>
>Here, Mr. Anderson makes the classical logical error of assuming the
>conclusion. He presents the idea that no six-year-old could possibly read the
>test as an indisputable fact, without any proof whatsoever. He claims that
>anyone who disagrees with his assertion is simply wrong, but presents
>absolutely no proof of the assertion.

You are wanting maybe a Masters Thesis or a PhD Dissertation
already? Oh gevalt!

[Moishe, ya made da pants too tight...!]

I still don't "present any proof" because any trip to a large
market with kids in tow of mamas or any visit to a first-grade
classroom will demonstrate to ANY observer that first-graders
do NOT have adult or even teen-age reading ability OR
comprehension of difficult subjects involving science and law.

>The hypothetical first-grade teacher who
>is supposed to be the Final Authority on the reading skills of six-year-olds
is

>never mentioned again. After all, someone might produce a first grade teacher
>who would say "Yes, some exceptional first graders could read that".

Oh, my, Jimmie is loaded with hypo! He might as well have
said "every exception 'proves' that exceptions are in
universal application (when they are in ham radio)!"

>Also never mentioned is the fact that most people taking the test would
>probably have seen the questions and answers before, with plenty of time to
>learn unfamiliar words and phrases.

Ah, Jimmie setting the stage for a production of Dumbed-Down
Ham Testing! [now opening in your neighborhood ham news-
group, performances daily...]

"Most people!" Jimmie KNOWS "most people."

He also KNOWS the motivations within the FCC according to
his public statements in here. Terrible side-effect of too much
morse...delusions of telepathic ability. Tsk, tsk, tsk.

>There DO exist six-year-olds with reading skills quite advanced for their
>biological age.

All of them take ham tests. Yes, of course.

>I have known several who would have little trouble reading the
>Novice and Technician written exams, particularly if the content of the tests
>had been available to them ahead of time.

Jimmie KNOWS all these things! Amazing.

Pity he was 8 years late getting his first license...missed all the
"fun and activity" of late-night beeping, saving the Titanic, etc.

>Reading comprehension is another matter. But the tests require only that the
>examinee select the correct answer, not an understanding of the question
>and/or answer. This is true regardless of the age or educational level of the
>examinee.

...unless it has been written up on ARRL news pages which then
makes exceptions a "regular rule" and an everyday thing if it
involves Ham Radio!

>Again, the reading skills and comprehension levels of the children who
actually
>took the tests are unknown to Mr. Anderson.

Absolutely. I don't KNOW every human being on earth involved
with amateur radio (even in the slightest). Jimmie do.

Perhaps the kindly, grandfatherly-appearing VE or VEs at the
test read the questions to the kinds...sort of like reading them
the Sunday funnies? :-)

>This paragraph is similar to the beginning of the second paragraph, using a
>scornful tone to question the legitimacy of the test results of the two
>children in question, the ARRL, and the VEC group who conducted the test.

Hot darn! Another "ear of scorn!" :-)

>Yet
>no proof of any wrongdoing is presented by Mr. Anderson. He implies that the
>tests could not have been legitimately passed by the children in question.

What?!? Me accuse ARRL of any DISHONESTY?!?

ARRL is PERFECT in every regard, they NEVER do wrong!
They are the Bedrock of US amateur radio! The Final Word.
All BELIEVE in them for they are the savior of the ham!

>Here's where Mr. Anderson accuses ARRL of "very mild fraud" and "hypocrisy"
–
>again, without any proof whatsoever.

Tsk, tsk, Jimmie left out Tone of Scorn...

[hum a few bars and the rest will pick up on it...]

>And again he assumes that the six-year-olds in question are
>"barely-able-to-read-and-write" without any direct knowledge of their
>abilities.

"...and a little child shall lead them..."

>In the case of VE-administered license tests, either the tests were
>administered and passed in accordance with FCC rules, or they were not. If the
>tests in question were administered and passed in accordance with FCC rules,
>there is no fraud, deliberate falsification or dishonesty of any kind. If not,
>then the fraud is not "very mild". Mr. Riley Hollingsworth has made it clear,
>through enforcement actions, that VE-administered license tests must be in
>accordance with FCC rules. Accusing VEs and/or VECs of deliberate
>falsification without any evidence borders on libel.

Oooo...see you in court, Judge.

Hello? ARRL is NOT the god of Ham. They are a Political Special
Interest Group. They admit to that on their IRS tax statements.

Special Interest Groups are entities ripe for criticsm in the grand
old American Way Of Life. Been that way for years. Jimmie
thinks ARRL is a religious institution? Must be...

>In the last sentence, Mr. Anderson allows the possibility that the written
>tests may be a "SHAM" – but again offers no proof. Nor does he qualify or
>limit his earlier accusation of fraud. If such tests are a "SHAM" then they
>are so for all new amateurs, not just young ones.

Yup. Jimmie thinks ARRL is the god of Ham...and he wants to
play the part of the Spanish Inquisitor...or an amateur Taliban...
it gets confusing at times with all the Religious Fervor of the

Faithful and the Zealots hawking the Hue and Cry Against The
Infidels.

>RESUME QUOTE
>
> No MORE evidence is needed...the evidence has already been
> presented although sugar-coated with parental pride and the
> usual propaganda of ARRL being all good things to US amateur
> radio and never making mistakes or illegalities.
>
>PAUSE QUOTE
>
>Yet again, Mr. Anderson assumes his conclusion, with no proof. His whole
>argument is that no six-year-old could possibly read and pass the written
>tests for any amateur radio exam.

Jimmie ain't presented any PROOF that ANY six-year-old CAN
LEGITIMATELY PASS ANY HAM TEST except what the god of
Ham pronounced on its web page. ARRL makes no errors, they
are inviolate (even if red in the face that we cannot see).

>He does not consider:
>
>1) That six-year-olds with reading skills and other academic skills quite
>above the average for their age do exist, and often have accomplished quite
>amazing things for their age

Jimmie Motto: Every exception is The Rule.

Jimmie was 8 years late accomplishing Amazing Things.

>2) That the written tests do not require comprehension of the material,
>just the selection of the correct answers.

...especially when kindly, grandfatherly VEs read the funnies
to the kiddies.

>3) That 2) has been true in the USA for more than 43 years, and that FCC
>has seen no problem with the system

This Important Matter never even got to an Appellate Court
level, let alone the Supremes, yes..... :-)

>4) That he has absolutely no information about the children or VEs in
>question, other than their age and license tests passed.

Yes, unlike Jimmie, I don't KNOW everybody involved in
amateur radio. He is telepathically omniscient for He is a
PCTA and a 1x2.

>Does an accusation of "deliberate FALSIFICATION" constitute an accusation of
>dishonesty? To anyone with comprehension of the meanings of the words
>"deliberate falsification" and "dishonesty", it is clear that an accusation
>of "deliberate falsification", is, by definition, an accusation of dishonesty.

"Heah come de judge...heah come de judge...!"
- Sammy Davis Jr. on "Laugh In."

>So we have at least two claims of "dishonesty" by Mr. Anderson, supported by
>nothing but prejudice and faulty logic.

And here we've had another Epistle To The Corinthians given
by the Right Reverend Jimmie Miccolis, Judge of the Superior
Court and Administrative Prosecutor of the Church of Hiram,
the god of Ham.

>Note that Mr. Anderson acts as prosecutor, judge and jury, yet presents
>absolutely no proof whatsoever to support his claims.

Oooo! A Supreme Judge has Spoken!

"Look upon my words, ye mighty, and despair..."
[paraphrase of Shelley]

>Note also that he does not add a signature to the post.

God forbid such transgressions! Shame! No SIGNATURE
to a newsgroup post!!!

>Why should anyone take Mr. Anderson or his comments seriously, given his
proven
>track record of faulty logic, unsubstantiated claims of fraud and deliberate
>falsification against strangers, and general prejudice against ARRL and most
>radio amateurs?

Ooooo! "Most amateurs" being Miccolis, Heil, Robeson, and Kellie Of The
26 Patents. The "backfield four" of the PCTA team and Mighty Morsemen
all (Roll didn't make the line-up because his bus broke down...).

>But rather than responding to Mr. Anderson using pejoratives such as "liar"
and
>"putz", let us give him the benefit of the doubt - even though he does not do
>so to the ARRL, those who oppose his views, nor to the young hams or VEs in
>question.

Yes..."benefit of the doubt." A Spanish Inquistor could sum it up in far
fewer words...and save the eyes of the other readers...

>Perhaps Mr. Anderson simply does not remember what he wrote. Perhaps he does
>not comprehend the meaning of words like "fraud" and "dishonesty". Perhaps all
>of these claims and denials are just simple mistakes on his part. After all,
>his posts here are full of similar mistakes.

"Mistakes" again. Sigh. The Right Reverend has wound up his
Sermon on the Antenna Mount...hopefully.

ARRL can do no wrong for they are the god of Ham. Oy, veh...

>It is also clear that Mr. Anderson was not "joking" about any of his
>accusations. Although he routinely uses many "emoticons" or "smileys" in his
>posts, not a single one is used in the above post by him.

Reverend Jimmie must have rented a video of an old black and white film starring Robert Mitchum...playing a self-righteous preacher riding into a small town with LOVE tatooed on knuckles of one hand, HATE tatooed on the other hand. Tsk, tsk, he wants to BE the "Night of The Hunter."

Yah...I don't have the Right Attitude nor do I adore and cherish Mighty Morsemen of the Past. Burn the Infidel at the Stake!

Reverend Jimmie KNOWS everyone's motivations and is preaching the Gospel according to the Church of Hiram. All fear Him for He is So Serious and Righteous!

Beep, beep.

>PAUSE QUOTE
>
>The above is so full of factual errors which have been addressed elsewhere.
>Here's a quick summary:

Pizza off, Jimmie. Don't hand us all that guff about "so full of
factual errors." You're still so browned off about Not Having
The Proper Attitude About the Glory and Majesty of your idea
of amateur radio to be objective.

Opinions are opinions, boy, and you haven't understood that
yet.

Let's continue, skipping to other "juicy" stuff to satisfy Mighty
Morseman Miccolis' Need For Revenge In Newsgroups.

>Now for the most relevant quote:
>
>RESUME QUOTE:
>
>I'm going for Amateur Extra "out of the box." Maybe I'll
>make it, maybe not. The personal point is irrelevant.
>
>PAUSE QUOTE
>
>Well, there you have it. Nothing ambiguous or qualified about it at all. Not a
>claim of what could be done, or might be done, but of what he was going to do.

Bullshit, boy. Take that into the entire context of the
message...and then go "interpret" your buddie Kellie's
message text the same way you "interpreted" mine.

You can't do it, boy. You're a PCTA and so is Kellie.

>Of course there is no time frame mentioned, and it is always possible he
>changed his mind in the three years since he wrote those words. But it is
>clear he DID say he was going to get the Extra class license.

Extra WHAT? :-)

I also said around that time, elsewhere, that I would invent
antigravity and win the Nobel Prize, writing my own speech
of acceptance in Swedish! :-)

Jimmie-boy, DO NOT GET SO PEDANTIC. Do NOT go
that way, for such things can misfire on YOU!

>RESUME QUOTE
>

>some sort of grudge against. He does not consider, however, that many of those
>he rails against are "radio electronics professionals". Note that none of the
>predictions made by him 3 years ago have come to pass. Amateur radio is not
>much different today than before restructuring.

In Jimmie's world of ham radio, little changes...he works CW
for DX on HF, lives in Google, constantly talks about the
past. R&O 99-412 must have HURT his attitude-set about
US ham radio something awful!

I just love his "interpretation!" "PREDICTIONS" of three years ago!

What does Mighty Morseman Miccolis think content of a
newsgroup IS? Edicts? Papal encyclicals? Good grief...

>I included the entire post simply to demonstrate that there was nothing in any
>of it to change the interpretation of the sentence

Oooooo! Jimmie is REALLY Out For Revenge!

The OBJECTIVE "interpreter!" :-) :-) :-) :-) :-)

>"I'm going for Amateur Extra "out of the box.""
>
>It's clear to any reasonable person what that sentence means.

Jimmie, Jimmie, Jimmie...it is "clear" that you are NO
"reasonable person!" You're a PCTA...that says it all.

Okay, I'll give you another thing to let you Live in Google:

I'M GOING FOR EXTRA-OUT-OF-THE-BOX. SOME TIME.

Some time...after I've been brainwashed into thinking that
morse code will "always get through when ALL other modes
fail," that US amateur radio is not a hobby but a vital
service to this country, that amateur radio is a Way Of
Life that requires some kind of Right Attitude just like
Jimmie's, Kellie's, Steamy's (Sgt HAH Putz, that is),
the Colonel's (when he isn't innovating order-wires).

>Perhaps all of his denials are just simple mistakes on his part. After all,
his
>posts here are full of similar mistakes, as shown in the above analysis.

Absolutely on the money...to the mind of any PCTA who
Lives, Breathes, and Upholds the Amateur Radio Way of
The Olde-Timers.

I don't have the Right Attitude to fit Jimmie's little mold (or
is that 'mould'?), ergo, it is FAULTY! Error!

"Danger, Will Robinson!" :-)

>So the question I would ask of you, Steve, is this: Why let Mr. Anderson's
>mistakes, errors, and insults bother you so much?

Only his pshrink knows... :-)

>Why should anyone take him or his comments seriously?

Or YOURS...

Jimmie-boy, you just can't take negative criticsm of the
US ARS...you can't take negative criticsm of yourself.

>And why would anyone interested in the good of the ARS want him to make good
>on his intention?

Why would anyone take Jimmie Miccolis' words seriously?

That poor guy has got skin thickness measured in virtual microns, is an avowed morseman, lives in the PAST on amateur radio regulation minutae of long ago, and constantly wants everyone to Go To Google to Avenge His Wrongs.

Get with the program, boy. At least try to live for the PRESENT if you can't envision the FUTURE.

I'M GOING FOR EXTRA-OUT-OF-THE-BOX. SOME DAY.

There, have a QUOTE in caps, repeated. Make what you want from that...it will be fun to see just how innovative and "interpretive" you will be... :-)

>He's as far off base on the order wire yarn as he was on the Key
>Officers listings.

Bravo on SELECTIVE QUOTING for whatever suits your
weird little outraged mind!

Now tell us more about Adventures in Guinea-Bisseau using
CW as an order-wire on an RTTY circuit. Gotta love those
tales of innovation and dering-do in a "sensitive posting!"

Now contact Sgt HAH Putz on the Admissability of Material
in this newsgroup. K4YZ has definitely said that NON-HAM
discussion in here is NOT ALLOWED!!!!

State Department postings, transmissions, modes, tall tales,
etc. are Verboten in the Official Notices posted by K4YZ
because they are NOT about amateur radio! You read it,
Obey it. K4YZ held a commission in the TN state guard
as a Communications Officer!

By the way, have you read any of W4RNL's columns at
Antennex or on his website? Ham antennas. For radio
amateurs. Can you understand anything there or do you
think it is a Greek posting? [just wondered]

Ever meet Biot or Savart? Cool pair. They made a law.
How about Maxwell? That's not just an old car, ya know.

Here, have a cashew nut...it'll remind you of old times...

Ol' "Steam" never did any HF comms in any service.

He was the "communications officer" of a whole TN state
"brigade." That means he probably answered the telephone
once a month at their meetings. :-)

Someone (probably Hall Monitor Heil) will make lots of hay
about your typo of substituting an r for a t in encrypted,
but you've gone beyond "Steam's" communication-outside-
of-ARRL-documents knowledge. Steamy probably thinks
encryption = morse code.

Or...Steamy will make Much Ado About Nothing by screaming
that you can't mention anything Outside of Ham Radio!!!!!! :-)

US amateur radio expressly forbids any method or modulation
or mode or whatever "that obscures the meaning of the
transmission." That makes it very obscure how he could
possibly pass any conventional amateur radio license
examination...he obscures his own reading attitude by some
weird emotion filter...a built-in very low S/N ratio... :-)

Ya got it, James OM. Why waste time even paying attention to a pair of gasbags such as he and his
minor clone T5-Slim Burke? Such a pair of gasbags of proportions such as to make the Hindenberg
look like a party baloon does make one wonder when they'll fire off in similar fashion.

Defintely a collosal waste of time and talent. For such drivel is clearly the extent of their talent.

>Wanna-be pediatrics expert Jimmie Miccolis seems to think
> that ALL six-year-olds have full comprehension of reading
> along with full judgement of responsibility at that age.

It's not about wether or not these kids did or did not have comprehension
of the material.

It's wether or not you said what you said.

You have not answered why you made an accusation you ahve not backed up
with evidence.

>I would assume that nearly all parents of THEIR children
> would claim that...(SNIP)

Quick, Lennie...remind us how many children YOU have sired and raised?

>I still don't "present any proof" because any trip to a large
> market with kids in tow of mamas or any visit to a first-grade
> classroom will demonstrate to ANY observer that first-graders
> do NOT have adult or even teen-age reading ability OR
> comprehension of difficult subjects involving science and law.

The "proof" is you delivering the hard evidence of YOUR allegations of
dishonesty.

I for one have no doubt the kids did not use a "cheat sheet" or other
unethical aid, and I have no doubt the examiners made no effort to "prompt"
them or "fudge" the grading process.

Does this mean the kids "knew" the material? That's irrelevent. If an
adult can read and re-read a "study guide" to the point of recognizing the
questions, so what if a 6 year old does it? A 60 year old?

>>Also never mentioned is the fact that most people taking the test would
>>probably have seen the questions and answers before, with plenty of time to
>>learn unfamiliar words and phrases.

> "Most people!" Jimmie KNOWS "most people."

Complete the sentence, Your Lameness. "Most people taking the test". In
that specific contest, he is right. This is a known fact. One need but stand
at the door of any VE session and watch the last minute cramming.

>Pity he was 8 years late getting his first license...missed all the
> "fun and activity" of late-night beeping, saving the Titanic, etc.

And you've been....70 plus years late...?!?!

>Yup. Jimmie thinks ARRL is the god of Ham.

As opposed to you who IS "god of Ham"...?!?!

(...see me choking back the laughter!)

>And here we've had another...(SNIP)

...example of Lennie the Lame doing one of his tent revival sermons
against the person asking the questions...but NOT answering the questions.

>>Note that Mr. Anderson acts as prosecutor, judge and jury, yet presents
>>absolutely no proof whatsoever to support his claims.

>
> Rewrite that to to read "a mystery why any knowledgeable ham would use
> a WBFD in preference to an dipole of equal size".

No one I know would. But make no mistake, they are a useful solution to some HF antenna problems, and are
in useful service at some ham stations where multiple antennas of better efficiency are simply not
possible. My only experiences with the B&W WBFD (at work) surprised me very much. They performed much
better than I ever expected, having previously viewed them as aircooled dummy loads. Clearly their
efficiency is variable and beyond the fact that maximum efficiency must be limited by the resistive
loading, is just as clearly is largely dependent on the operating frequency in use. On higher frequencies
they certainly work acceptably well while on lower bands the term "aircooled dummy load" is no misnomer.

Although I picked up a "bargain" used B&W unit when I ran accross one, I did so mainly for the wideband
balun and large terminating resistor, worth more than what I paid. Under some circumstances I might indeed
string it up intact, or modify it to my own requirements of the moment. But so far I've been quite happy
with individual dipoles, even when operating in temporary locations. I usually hang one cut for 20 meters
in inverted vee style with the ends low enough to reach from the ground, and cut a pair or two of extension
wires with alligator clips to hang on the ends when I want to drop down to 30 or 40. and let the autotuner
do it's thing.

But I would never count the WBFD out, after having used one for a few years to meet several HF statewide
nets where ALL the couple dozen net stations were also using them successfully and where no one experienced
anything but success. They're not just junk. In fact, it struck me at the time that one could recalibrate

his S-meter and never know the difference!

Jeff, the local library has a copy of QST on the shelf. NCI has no
such publication. If they did I would ask for them to mail one to
your infamous PO Box.

I'm not going to quote all the back and forth on this but simply want to add some comments.

There's no requirement that anyone has to be able to read and write to take the test. I have been at VE sessions where an ADULT was not literate enough to read the test so it was read to him. Being unable to read and write, doesn't stop a person from memorizing the questions and the answers to those questions and thus being capable of passing the test.

>As before...what difference does all this make?

Carl and others have made an issue out of ARRL being "THE national society...".
But there is no other "national society for amateur radio" in the USA, so
ARRL's claim is perfectly accurate.
>

Answer: NO.

>I am both an ARRL member and a volunteer in ARRL field activities (LGL).
>I am also a director of NCI.

No problem belonging to both, either.

>Frankly, I don't see any value to this
>discussion
>since it is meaningless in the ongoing policy discussions and has been for
>some time.

Then why did NCI's Executive Director bring up ARRL membership figures as a discussion point - not just now, but several times in the past? What's good for the ARRL goose should be equally good for the NCI gander.
>
>Turns out the FCC listens to ARRL, NCI and anyone else that has anything
>credible to say...and in the end the FCC decides what to do.

Yup - been that way a long long time.

Anyone else know who the "National Amateur Radio Council" and the "Society of American Radio Amateurs" were, and what they accomplished? Quite interesting, really.

>Hell, it works for me...not to mention that NCI's track record
>with seeing NCI viewpoints taken by the FCC has been pretty
>darn good.

Considering that NCI is a one-issue organization, the tendency would be to either have very high or very low success.

But why all the secrecy about membership numbers?

>else.

Not exactly. All anyone has to do is visit their website, fill in an online application, and click the appropriate places to affirm that they want to be a member and agree with certain policies of NCI. Membership numbers are assigned sequentially, starting with 1000 or 1001. No license required, no dues, communication to members by email and website.

>>I'm one and I'm current. Donations are accepted to help cover costs.

The only way members are removed from the rolls is by request. This can be a request from the member him/herself, from a family member in the case of a deceased ham, or by request of the NCI BoD if a member behaves in a way prohibited by the by-laws.

Jim:

I used to be active in MARS while stationed in Germany (call sign AFA7LR). I was involved mainly in handling RTTY message traffic from our main station on base, but used to check into the phone nets from my home station. They were deadly BORING. If you get off on strictly routine comms, then MARS is for you! However, their digital mode operations may indeed be interesting.

That's physically possible but it's an extremely improbable scenario. Anybody in their right minds who can get an antenna up at 100 feet is not about to waste that kind of precious height on a lousy antenna. Particulalry on 40 where decent antennas don't need much real estate.

> Remember, it was 40 on a good evening, and Hans is in the midwest.
> Heck, I work the West Coast with my low inverted V and 100 homebrew
> watts under those conditions - on 80 meters.

Not with a signal like Hans pumped in here that nite ya don't. I tuned around before I called the net, there were a flock of midwesterners on the air then and Hans *buried* 'em. I'll stick, he was not using a wideband, lossy antenna like a t2fd or anything like it and the chances are that he was running suds too.

Which is exactly what the gummint did on HF and probably still does in pockets. There are gobs of old photos floating around of racks fulla military 390s listening on widely-separated HF freqs. That's not how hams play the antenna game then or now, not even close.

> The interesting thing is that some folks are of the mindset that "if
> the govt. and military use it, it MUST be the best". They disregard
> the differences between the govt's needs and resources vs. hams. (You
> see that sort of thinking all the time here on rrap).

Ya sorta got me there, I haven't noticed much posted around here about using gummint radio equipmemnt in the ham bands. Makes no sense, certainly military radio gear with maybe an exception or two simply doesn't meet the average ham's operating & technolgy implementation needs. This ain't ARC-5 days, we've come a long way baby and the miltary has too but in vastly different directions. Including the antennas.

> Manufacturer's
> advertising hype doesn't help, either.

They oughta add a question to the pool: "Antenna advertisers (a) Never lie (b) Only lie sometimes (c) Always lie.

Oh, my, pedantry strikes again... :-(

"24/7" is a common coloquialism for "continuous operation."

Herr Robust is running out of ammunition for his tireless
tirade throwing.

UNITS work 24/7. Organizations work 24/7. Police and
fire and medical public safety units work 24/7. Some
supermarkets even work 24/7.

>
>Don't you have enough egg on your face for a single week? I'll settle
>for a single example of someone who is actually working 24 hours per

>day, seven days per week.

In late 1945 the 71st Signal Service Battalion was organized, built a transmitter site on a man-made island in Tokyo Bay called Tsukishima. That transmitter site operated continuously, 24 hours a day, 7 days a week until it was moved to an abandoned airfield near the city of Kashiwa, northeast of the city of Tokyo during the years of 1954 and 1955. Operation never ceased...as circuits were downed at Tsukishima they were upped at Kashiwa. The callsign was ADA. Operation continued by the US Army until 1963 when the USAF took over all HF transmitters, receivers, torn-tape relay. Kashiwa remained in continuous operation until 1978 when the necessity for HF communications circuits as a primary means were no longer needed by the USAF.
That's 1978 - 1945 = 33 years of continuous operation by USA and USAF units of about 1000 strength, respectively.

The 71st was renamed the FEC Sig Svc Bn in late 1953 and merged with the 72nd Sig Svc Bn at Camp Zama in 1958 to form the Japan Signal Service Battalion with 7 companies total. Downsizing of US military units continued over the following years until the only Honshu island signal unit left was the 78th Sig Svc Bn at Camp Zama (the old 71st and 72nd combined after two more unit name changes). They are under command of the 516th Signal Brigade at Fort Shafter, Hawaii, that brigade attached to Headquarters, US Army Pacific. Members of the 78th still wear the Fuji patch on the left shoulder that I and thousands of others wore proudly years before. The callsign ADA is now that for the Headquarters USARPAC. It still lives about 57 1/2 years later.

The 78th Signal battalion doesn't operate on HF continuously anymore but the have an HF detachment to maintain that as a fallback emergency feature. That battalion DOES operate 24/7 for DSN maintenance and some microwave circuits.

>This excludes someone who works the
>occasional long stretch. Come up with someone who has actually put in
>148 continuous hours.

I've just come up with someone who used to be in the US government who is a pedant plus but cannot do simple arithmetic. There are 168 hours in a week, senior, not 148.

Next time order your eggs fried. They aren't so messy looking on your face...

>having never been a participant?

My apologies, Herr Robust. I didn't know one had to have
PASSED A TEST FOR FUN to understand what "fun"
and "hobbies" are...!

I'll run right out and contact for the FFC, the Federal Fun
Commision, and apply for an FC, a Fun Credential. :-)

>> Of course, according to Heil, Robeson, Miccolis, and all

>> - US amateur service general order #1
>
>This is more of you as described by N2EY. I don't only work HF and
>don't only chase DX. I certainly spend no more than half my air time
>using CW.

Bull-y for you. Code speed not up to par?

>> Tell us more about Guinea-Bisseau and how it compares to
>> a Scandinavian country. Does the US State Department radio
>> in Finland use CW as an order-wire on RTTY circuits too?
>
>What U.S. State Department radio in Finland?

You mean to tell us the US State Department DIDN'T HAVE ANY
RADIO IN FINLAND?!?!? Good grief, that's an extraordinary
revelation!

Was that information cleared through official sources?

>> Was there thin ice in Guinea-Bisseau?
>
>Club Galleon.

Any dish of cashews at the bar? :-)

Wow! High life in downtoun Guinea-Bisseau!

>I could have sworn you were just pretending to be one, despite your
>present claim to the contrary. What temperature do your Obsession and
>Hate-Rage posts generate?

About 3 Kelvin. Too hot for you, iceman? :-) :-)

>> For "credentials" in psychology, I can call on my own
>> consultant, my wife, who has two Masters degrees (both
>> from University of Illinois) with one of those being in Social
>> Work. She was a licensed private counselor in the states
>> of Illinois and Washington for a number of years. She has

>> put on the shelf as classic examples of dysfunction.
>
>What does she have to say about your antics?

"Antics?" Commentary in newsgroups are "antics?" :-)

She thinks I'm having fun, indulging a bit on poking all that
fun at a bunch of tight-assed holier-than-thou self-proclaimed
"superior beings" who need Credentials From Authorities in
everything. In short, like the chief export of Guinea-Bisseau
some of you are nuts. :-)

>But you aren't a licensed psychologist any more than you are a licensed
>radio amateur. You can't practice either without a license.

Colonel, are you undergoing a Religious Transformation? It looks
like you are trying to become an assistant pastor to Reverend
Jimmie, his most Holy Inquisitor of the Church of St. Hiram.

Heck and darn, I have to wait until the Federal Fun Commission
mails me my Fun Credential so that I can Know About Fun!

>Show your wife the above paragraph and ask her professional opinion of
>someone who would continue posting such unsubstantiated stuff. Explain
>to her that you and not some adolescent wrote it.

She might still be studying Your Orders, Herr Robust.

Have something to eat. Pizza a rope.

>> Yourself, on the other hand, imply you are the "expert" in
>> radio...not just amateur radio, but in ALL radio.
>
>Such a claim has never been made by me.

NO?!?!? Okay, I stand corrected. I'll rewrite your dossier,
Herr Robust, mark you down from "officious blowhard who
knows all" to "officious blowhard who once did comms for
the government." You will get a gold star if you can tell how
you could be a radio officer for State in Finland yet not have
any radio!

>All of your untruthful claims have been repeatedly and strongly refuted.
>In fact, my original statements from five years back have just been
>quoted here to show you for what you are.

Waaa, waaa, waaa. :-)

NO "refutation," senior. You haven't even come close to
copying your original statements (the colonel "makes
statements" instead of posting messages...typical).

Copy over ALL of them...then keep doing it over and over
and over again until your anger is satisfied. Goodie, by
that time everyone will have left, tired of all the outrage
quotations. Have a nice life.

>No, your current problems are explaining how you've made the untruthful
>statements about things like use of CW as an order wire and the absence
>of my name in State's "Key Officers" lists in the face of irrefutable
>proof to the contrary.

Try to LIVE with what happened, colonel. You claimed that
"your idea" of a "CW order-wire on an RTTY circuit" was a "neat
idea...something to impress the troops, few of whom had ever
worked commercial HF communications. You didn't expect
that someone who HAD done that would stuff it up your nose.
Then you backtracked and said it was "State Department
radio procedure." Oh, sure, first it is "your" idea then it is the
government's "procedure." That's nonsense, boy, I say
nonsense.
:-)

Just how did you communicate out of Helsinki without any
radio set, boy? MilSpec Nokia cell-phones? :-)

Oh, oh, everyone now HAS to Get On the "immediate issues" that
Steam demands be discussed! Amazing, he follows that with the
hypocritical double-standard below...

>> I ahve introduced and
>> reintorduced them, but they fall on deaf ears, so it shall be...I am not
>> another "Vipul" who will damn all Amateur Radio because it won't meet MY
>> needs.

Tsk, tsk, tsk. Ok, everyone, Get On the "IMMEDIATE issues that
Steam demands! :-)

>Do you believe that the FCC, through a body of rules titled "Part 97"
>governs amateur radio?

...that will have in interesting answer... :-)

>> Here's some facts:
>>
>> (1) The FCC has so far refused to revisit any further petitions on the
>> Morse Code testing issue until it is addressed in WRC-03.
>
>Is this one of your "immediate" issues?

It must be that, as a beeping 1x2 like Reverend Jimmie, Steamy
KNOWS (intrinsically) what the FCC is doing and what motivates
that agency.

>I wish they would revisit it.
>
>If it is unnecessary to obey START treaty with Russia...
>If it is unnecessary to form a coalition to bomb Iraq...
>
>We ought to be able to eliminate the code exam for free American
>amateurs.

Um...morsemanship isn't quite of the same importance as
American foreign policy that matters to the entire nation.

>> (2) Most major western powers and most of the rest of the world has
>> already moved to a minimalist position on Code testing, dropping it to 5WPM
or

>Like JA operator licenses. Imagine the screaming if ARRL did that...

Jimmie, ah say Jimmie boy...whut's all da fuss over
member numbers?

Is it because ARRL doesn't have even a full quarter of all US
amateur licensees as members? And ya all have to show
that "ARRL is better than NCI?"

'Fess up, boy...

>>> >> >Nor, I might point out, does ARRL's membership constitute a majority

>>> >> >noticed.
>>> >>
>>> >> Quite true. Nor does ARRL claim to constitute a majority, either.
>
>See what I mean?

ARRL has been around since 1914. NCI only a few years.

Has ARRL ever had more than a quarter of US ham licensees?

If not, why not? ARRL makes no mistakes, do they? I mean,
boy, like they are of the Church of St. Hiram, the god of Ham.

>>> >
>>> >ARRL claims to be "THE National Society for Amateur Radio" ...
>>>
>>> Is there another national society for amateur radio?
>>>
>>> NCI cannot claim to be one, because
>>>
>>> a) it is "international"
>>> b) its sole stated purpose is to end stand-alone Morse code testing.
>>>
>>> What other "national society for amateur radio" exists in the USA?
>>
>>As before...what difference does all this make?
>
>Carl and others have made an issue out of ARRL being "THE national
>society...".
>But there is no other "national society for amateur radio" in the USA, so
>ARRL's claim is perfectly accurate.

ARRL is perfect in every regard. Well, said Reverend Jimmie.

>Well? If NCI's Executive Director can make a point of ARRL member numbers and
>percentages, the same rules of discussion should apply to NCI member numbers
>and percentages.

About the only reason that ARRL membership numbers are
revealed is to get advertisers for ARRL publications. The
numbers are revealed on the QST advertising page on their
website...because QST is mailed to all ARRL members...it
is ARRL membership magazine.

NCI doesn't have a membership magazine and thus no
advertisers and no need to show demographics.

>Well?

Re-calibrate your dowser...you are drilling in dry areas, boy.

>Then why did NCI's Executive Director bring up ARRL membership figures as a
>discussion point - not just now, but several times in the past? What's good

>for the ARRL goose should be equally good for the NCI gander.

Do you feel any goose?!?

I think it is rather well-known that ARRL can't get as much as a
whole quarter of US amateur licensees. Since it has never had
a much greater fraction for 89 years that ought to demonstrate
something. At least to the rational. Religious Believers can't be
shown that.

>Anyone else know who the "National Amateur Radio Council" and the "Society of
>American Radio Amateurs" were, and what they accomplished? Quite interesting,
>really.

The Radio Club of America was first organized in 1909, five
years before Hiram started his Divine Work.

The Radio Club of America still exists. They have some
interesting old photos of amateurs and their equipment on
their website. You like the past, Jimmie, ought to be right
up your alley...

>Considering that NCI is a one-issue organization, the tendency would be to
>either have very high or very low success.
>
>But why all the secrecy about membership numbers?

Sorry, Reverend Jimmie, you aren't authorized to fly those
Black Helicopters. There's NO conspiracy about "numbers"
other than the well-known failure of ARRL to get any more
than about a quarter of all US amateur licensees.

ARRL is NOT perfect.

During Saturday / Sunday 1st & 2nd February 2003 - Barry Amateur Radio Society (South Wales) will be operating a Special
Event station under the call sign - GB0CCE. The station will operate on HF amateur bands and issue a special QSL card.
The callsign CCE (Captain Cook's Endeavour) has been issued to mark the visit to Cardiff Docks in Wales of the replica of the sailing ship HMS Endeavour used by Captain Cook in his journeys around the world.
The ship is in Cardiff dock for a refit until March prior to making journeys to ports in the UK during 2003 and other parts of the world at a later date.
The ship is open to the general public together with an exhibition of the work and craftmanship involved. The Barry club also
welcomes all to its special event station or make contact them and receive the special QSL card that has been issued.
Further operation until March is planned and may well form part of National Science week. Details will be issued when confirmed.

For further information contact the Barry Society Chairman Brain Brown (GW0PUP) Tel 02920 832253.

I wasn't the provider, I was the recipient. My permission was not
transferrable, therefore I cannot give it to you.

> United Nations regulations on the subject are available from on-line
> sources. You did not meet the criteria as an authorized operator.

I had permission from my commander. It was enough.

> No, I clearly said I DOUBT you have any. I did not say you didn't.

Why would you doubt I had any? Do you doubt I was in Somalia? If you
doubt I was in Somalia, then why do you accuse me of illegal operation
from there?

Your brain is squirming like a toads.

What lie to come up with next.

Well, Steve, you're a little late. I've alread brought up issues.
We'll discuss them first.

Len, give it up! He nailed you good on the Extra out of the box (no time limit stipulated, however). I think I told Bruce I was going to get Extra, also.

So what are we going to do about it?

BTW, I heard Jim's looking for a prison artist to get a tear tattooed on his cheek bone in your honor. ;^)

> > do it's thing.

That's as SOP as ham radio gets. We don't operate 2-30Mhz inclusive
like the military does or has done where a t2fd makes sense. We
operate in discrete slivers of HF space where $4 homebrewed dipoles
are far more efficient than any t2fd.

>
> But I would never count the WBFD out, after having used one for a few years to meet several HF statewide

> his S-meter and never know the difference!

Any efficient cloud warmer will work fine in those applications.

The real attraction of the t2fd to some is that the thing will present
a low enough SWR at the feedpoint on the ham bands for them to be able
to duck around the need for a decent tuner. And/or knowing how to use
one. Which, considering one particular t2fd admirer in this thread is
most likely the case.

By jove, I think Herbie's got it!

:) :) :)

ps: don't forget to give those non-hams a taste
of k1man's redundant poor-audio quality
broadcasts. we need more psudeo RF
ambulance-chasing "jump teams" you know.

pss: saw one guy at a ham club meeting here last week.
3 HT's on his belt....belt/waistline being what looked
like a size-58. (he actually had to *turn sideways* to
go thru a standard 30 by 76 inch door frame) Great image
for ham radio eh? Someone should videotape him trying
to get into a phone booth at the next hamfest and send it in
to America's Funniest Home Videos before he drops dead
of a massive cornary and they bury him in a piano crate.

Note the cautionary phrase "in their right minds"...

> Particulalry on 40 where decent antennas don't need much real estate.

A simple coax-fed 40 meter dipole is about 66 feet long and has
radiation efficiency of 90% or better across the whole band - not just
one frequency.
>

> using gummint radio equipmemnt in the ham bands.

I'm not talking about equipment per se, though there has been some
ranting about SINGCARS equipment. (How SINGCARS would ever relate to
amateur comms has not been explained). And endless recounts of high
power point-to-point transpacific military RTTY comms of a
half-century ago.

Plus lotta discussion about the WBFD/T2FD, fer one. HF spread spectrum
is another.

> Makes no sense,
> certainly military radio gear with maybe an exception or two simply
> doesn't meet the average ham's operating & technolgy implementation
> needs.

The needs and resources are entirely different. Plus the new stuff is
too costly for almost all hams anyway.

> This ain't ARC-5 days, we've come a long way baby and the
> miltary has too but in vastly different directions. Including the
> antennas.

With a few exceptions, most WW2-vintage surplus was better utilized by
hams as a parts source than as a conversion project. The low cost of
today's ham gear makes the point moot - you're not going to find the
equivalent of, say, a Ten Tec Omni 6 in surplus at anything like the
price you can be a clean used TT with all the filters.

The amateur solder slingers are too busy homebrewing or building kits.
More bang fer the buck than fooling with surplus.

Ads for the WBFD don't actually "lie" in the sense of saying things
that are not true. The advertised antennas do cover the advertised
frequency range with the advertised SWR when installed as recommended,
and contacts can be made with them.

What's not mentioned is how inefficient they are, particularly at the
low end of the frequency range.

I'm new to this topic so don't flame me, but if W1AW has a bulletin, why can't Baxter have one? What is Baxter doing that is so bad that the FCC would want to shut him down? He has been on a long time and they haven't done anything... so doesn't that mean he is perfectly legal as far as the FCC goes? Last question. If Cronkite gave Baxter that announcement he uses, why should Baxter have to stop using it now? I heard Baxter used to call people and the government names and sent out some felony complaints, but isn't interfering with Baxter's show illegal?

I know I'm new and I'm not a ham, but I started to listen to Baxter's show this month, and it just sounds like he is trying to help minority kids and some kind of peace corp, plus he is putting other people's material on, like newsline and arrl and rain and the like. So where's the beef?

Please, no flames, I'm just trying to learn and keep an open mind.

Paul

>Proven to be irrelevent?
>
>OK, prove it.

The FCC's done that for me, Brian. They have stated that they will not consider any further petitions on this subject as no new evidence on the validity of code testing hes been provided.

Furthermore, FCC officials of some repute (ie Messrs Hollingsworth and Cross) have publically stated that any further badgering of the FCC on this matter only hurts the Service's overall standing with them...And they made it clear they were addressing both the pro and anti factions.

>> The FCC interprets the "Farnsworth question" to be like the
>Coke-vs-Pepsi
>> taste tests. Who cares?
>
>The patent office.

The Patent Office is now regulating Amateur Radio?

>>Youse guys confer and get back to me.

OK. So says you. NOW, please prove where this overwhelming support for
code testing supposedly is.

The FCC, not the ARRL or any club I am aware of, has stated taht code
testing will remain until it's underlying need (ITU treaty) has been deleted or
amended.

And I am still correct.

Re-read what I said above, then go back through the issue YOU cite
page-by-page.

There is not ONE article in the issue you cite that mandates or supports continued code testing for the Amateur Radio service past the deletion or modification of ITUI S25.5.

There ARE ads and offers of support for those who must still complete the current code test inorer to obtain an HF-grade Amateur license.

That is no support for the testing concept itself.

Blustruous Baxter's transmission are nothing more that a radio
talk mostly for the benefit of a few hams who like to hear
themselves brag on the air about how great they are. 99% of his
transmission have nothing to do with bulletins pertaining to ham
radio. He assumes he owns certain frequencies, which he does not.
The best thing that could happen to ham radio would be to take
k1man off the air.

Although this has all the earmarks of a troll, I'll give one shot at explaining it to you. However, the second clause in the first sentence of your second paragraph is a serious impediment to your understanding of the issues.

W1AW is the station of the ARRL, which is the sole effective representative of amateur radio to Congress, the FCC, and other governing entities. The bulletins that it transmits meet every standard of permissible transmissions set forth by the FCC.

The principle standards are set out in Part 97, Sections 111 and 113, the pertinent excerpts of which are shown below:

Authorized one way transmissions:

97.111 (b)
(5) Transmissions necessary to assisting persons learning, or

improving proficiency in, the international Morse code;

(6) Transmissions necessary to disseminate information bulletins;

Prohibited transmissions:

97.113 (b)
An amateur station shall not engage in any form of broadcasting,

nor may an amateur station transmit one-way communications except

as specifically provided in these rules; nor shall an amateur station engage in any activity related to program production or news gathering for broadcasting purposes...

Baxter doesn't fall into the Morse code practice category, and it may be a stretch to characterize his tramsmissions as "information bulletins" given the vitriolic and personal nature of much of them.

The more important consideration is that to listen to W1AW bulletins, the format is clearly that of a bulletin. They are about amateur related topics, they are a recitation of the text, and that is all.

Baxter's transmissions include call-ins and interviews, and he refers to them as programs. They may not even be amateur radio related. In short, they sound like a broadcast, they feel like a broadcast, they look like a broadcast. They fail the duck test. They are broadcasts, and they are prohibited.

The other significant point is that W1AW has been providing its service for about 80 years, give or take a few. There is every reason to believe the service will still be provided 80 years from now.

Baxter, on the other hand has only been broadcasting his programs for a few years, and given his age, are unlikely to continue more than 15 or 20 years.

So, who is providing an amateur radio service and who is broadcasting illegally? Not too hard to figure out.

There are other legal issues regarding station control, etc., that will probably be his ultimate downfall. For me, the broadcasting is the part that sullies amateur radio.

The Cronkite "issue" is one that will ultimately be settled by attorneys, and is not really an FCC issue.

The slander and the felony complaints are also legal issues that will eventually bite Baxter, too. However, no matter what illegal acts others may do to him does not mitigate in any way his illegal acts. They are an entirely separate matter.

Does Herr Robust need a napkin for the second day's Egg
Foo Face?

Go thee to Google and search for direct quotes from K0HB
on ARRL membership. Go thee to ARRL website and find
direct statements of membership.

Anyone or any entity can become a member of ARRL. Their
"membership" is so loosely defined that ARRL must make
statement (ugh) that ONLY licensed amateurs can VOTE in
ARRL elections.

If Marian the Librarian signs a subscription request of QST
for her library, she becomes a non-voting "member" or the
library itself becomes a non-voting "member." ARRL won't
play 76 Trombones for her during ARRL elections.

Oh, my! NO statement of height above ground, Reverend
Jimmie, NO mention of parasitic effects of nearby
conductors, NO mention of vegetation absorption or any
other dielectric or partial dielectric absorption...it is stated
in the Absolutist "has a radiation efficience of 90% or
better across the whole band!" :-)

NO mention of the pattern influenced by nearby things
within the near field. "Radiation efficiency" deduced by
relatively low SWR (which reads VSWR) as measured on
an uncalibrated hamswrmeter? :-)

Take all of that to r.r.a.a. and see if anyone raises a flag
to it, okay? There is NO Part 97 regulation on HF antennas
that MUST be used nor are there any prohibitions AGAINST
certain HF antennas.

>> > "T2FD" stands for "tilted, terminated, folded dipole". Originally

>

>Obviously.

"Obviously?!?" NO PROOF presented, Reverend.

I've touched such "390s" at Camp Owada. Jimmie Carpenter
worked there (he's a WA2...).

But...the antennas there were rhombics and delta-match
dipoles.

>> That's not how
>> hams play the antenna game then or now, not even close.
>
>Not how hams in their right minds do it, anyway.

Yes, Reverend. Follow the Good Book religiously. No
infidel "in his right mind" would DARE use something
else. That would be heresy.

>> > The interesting thing is that some folks are of the mindset that "if
>> > the govt. and military use it, it MUST be the best". They disregard

Go thee to Google, Reverend Jimmie...you will find MANY
messages on morse code use BY the military as an
incorrect rationalization for continued morse testing for
amateur licenses having below-30-MHz-privileges.
Especially so by ex-USN types who learned morsemanship
in the Navy.

>> Ya sorta got me there, I haven't noticed much posted around here about
>> using gummint radio equipmemnt in the ham bands.
>
>I'm not talking about equipment per se, though there has been some
>ranting about SINGCARS equipment. (How SINGCARS would ever relate to
>amateur comms has not been explained). And endless recounts of high
>power point-to-point transpacific military RTTY comms of a
>half-century ago.

Does the Reverend KNOW what is "SINCGARS?" :-)

Frequency range 30 to 88 MHz. Bridges the amateur 6m
band. It is portable, a small manpack, has an RF power
output control...like ham QRP rigs for outdoors work. FCC
allows hams to use spread spectrum which is an option on
that set by panel control. A quarter million sets have been
produced so far...does the Reverend think they will "never"
become surplus? :-)

Tsk, tsk, tsk. Reverend Jimmie was never in the US military,
not even working for State, never did HF comms for the
government lately or even 50 years ago (he wasn't born yet
50 years ago)...so anyone else who DID do that is, in his

absolutist, religious mind, spewing "endless recounts" of
HF communications experience. If the Reverend didn't do
it and the Good Book of the Church of St. Hiram hasn't
printed it, it is no good.

Kellie can't say squat either...he shot his catapult piston
as a civilian and while taking intelligence photos of a
flying Russian bear. :-)

>> Makes no sense,
>> certainly military radio gear with maybe an exception or two simply

>too costly for almost all hams anyway.

Ham and lima beans in MREs isn't too bad... :-)

Ham radio does NOT work 24/7. The US military works 24/7.
With the exception of the Prussian Colonel's service, of
course.

However, let's just look at the 1948 surplus radio market as
represented by prices at H&H Electronics on Kishwaukee
Street in Rockford Illinois then: ARC-5 receivers for $6 each,
ARC-5 transmitters for $12 each, ARC-5 antenna tuning unit
and voice modulator for $18 each; racks for the above in
several models ranging from $3 to $10 each. All working,
aligned, packed in individual domestic cartons, ready to plug
and play, including dynamotors. [ideal for mobile if one had
a 28 VDC vehicle ignition system such as Kellie had...?]

ARC-5 (aka SCR-274) units were made by the thousands at
government cost easily 10 or more times surplus prices,
flew in all sorts of WW2 aircraft (aircraft did not have much
in the way of nice environmental control).

>> This ain't ARC-5 days, we've come a long way baby and the
>> miltary has too but in vastly different directions. Including the
>> antennas.
>
>With a few exceptions, most WW2-vintage surplus was better utilized by

>today's ham gear makes the point moot - you're not going to find the
>equivalent of, say, a Ten Tec Omni 6 in surplus at anything like the
>price you can be a clean used TT with all the filters.

Reverend forgot that nearly all WW2 surplus radios worked
well outside ham bands of then...or today.

Gosh, Reverend Jimmie KNOWS what US hams DID before
he was born! He KNOWS the sets were "just parts sources!"

He does NOT know of dozens of ham periodicals featuring
WHOLE SETS converted for ham use.

>The amateur solder slingers are too busy homebrewing or building kits.
>More bang fer the buck than fooling with surplus.

He KNOWS all...SEES all... :-)

>> Especially when they're firmly established village idiots whose real
>> hobby is trolling RRAP.
>>
>Well, that leaves me and a few others out...

Holy Men never troll.

The Church of St. Hiram is never wrong for they are the god of
Ham.

This is getting to be better than a can of imported cashew nuts!

>
>OK, prove it.

Dill Sergeant Putz seems to have a memory problem. The US amateur
regulations concerning definition of morse rate has been discussed at
length and shown that the FCC had been using an outdated CCITT
Recommendation that did not define word rates. Dennis Ferguson
did the cap on that showing the relationship to morse word rate as
given in the very latest version of Part 97. There is NO specific
definition of character rate versus word rate, though that was de
facto (not de jure) ruled by the FCC giving VECs permission to send
characters at a higher rate than word rate.

>> The FCC interprets the "Farnsworth question" to be like the
Coke-vs-Pepsi
>> taste tests. Who cares?
>
>The patent office.

Brian, you are too subtle for the humorless Dill Sergeant. The
Patent Office rules on the formulation of beverages and the
subsidiary Trademark folks rule on trademarks of products.
Dill Sergeants not only lack humor, they mix metaphors
meaninglessly...

Metaphors be with them...

>> >So bad laws are ignored. Ignoring a law, however, is very different
>> >from enforcing a law.
>>
>> Who defines what is a bad law, Brian? You? Lennie?
>>
>> Youse guys confer and get back to me.
>
>So why did you clip the part about you not knowing who is in charge of
>enforcement? The FCC or Major Organizations? Huh?
>
>Another lie.

Dill Sergeants of the Amateur CORPS are the lawgivers. You are
supposed to obey their Commands...for the corps, God, and
country in that order. They get confused when they can't find the
answer in the UCAJ (Uniform Code of Amateur Justice) and try
to get by on bluster with shouting.

Temper fry.

>
>Len, give it up! He nailed you good on the Extra out of the box (no
>time limit stipulated, however). I think I told Bruce I was going to
>get Extra, also.

Reverend Jimmie rode into town, found an old message
under an old stack of messages, yanked it out and
Issued Orders to Get Out Of Town By Sunset.

He was livid with fury and righteousness and took time
from working DX on HF with CW (and his family?) to
spend more countless hours on Google digging, digging,
digging for "dirt." His Wrath knows no bounds and all
Sinners against the Church of St. Hiram Shall Be
Punished!

He can't take things in context but must take them out of
context, highlight them, separate them to Illuminate The
Transgressions of The Ungodly. Another compulsive-
obsessive who MUST be RIGHT (anywhich way he can).
"Face" must be preserved.

"Extra out of the box" should not be difficult...except for
the needless morsemanship test in the year 2003...107
years after radio was first proved as a comm medium...
94 years after the first USA organization (Radio Club of
America) was formed...58 years after the end of World
War 2 (also the end of using morse behind enemy lines).*
US radio amateurs MUST revere and venerate beloved
morse code and worship at the Church of St. Hiram or be
virtually burned at the stake, forbidden the Rights of the
US Constitution and petitioning their government for the
redress of grievances.

The Haulers Of Infidels To The Stake must keep igniting
their burning bushes for THEIR HONOR is really at stake.
They managed to pass a code test long ago so ALL must
pass a similar test or be branded, castigated, spit upon
as "inferior."

Reverend Jimmie: "I'll have my stake medium rare, no explitives, with a large sprig of prissiness on the side."

>So what are we going to do about it?

Dunno, Brian. Seeing what the Extra does to former human beans...along with the Mark of the 1x2...and the neverending fantasy stories...plus the marching in ranks to the drum beat of morse, morse, morse in the "service" of their nation doesn't sound all that attractive to rational social persons.

Our house doesn't have any wallpaper so DX contesting isn't on the List Of Things Desired. Keeping the Traditions of Morsemanship Alive (or Dead) is very low on that List, last in fact. Accumulations of certificates and brag sheets on the wall for all to admire (wife's two Master's sheepskins are in a box in the northern house, mine in the file cabinet here) about WAS and DXCC and the like aren't an inducement. I once worked HF "DX" circuits trans-Pacific on a 24/7 basis (meaning continuously) and know it as a definite possibility as far back as 50 years ago. I've used radio personally to communicate on LF, MF, HF, VHF, UHF and microwaves in other radio services so that act of using radio is not strange nor un-familiar nor magic nor mystic, not even metaphysical. After making a comfortable living pushing electrons around, I know one has to obey the laws of physics first, the laws of humans second.

Maybe it's from an interest in technology? No, that can't be it for the Prussian Oberst has commanded that "interest in radio" ONLY happens when one has an amateur license.

Maybe it's from an interest in socializing with others, sort of like early CB Radio Service was? No, that can't be it for the chest-thumping, morse-beating, mind-boggling Bigots all say that CB is evil incarnate. Heaven forfend that anyone stoop so low as to suggest such heresy?

Maybe for its historical value of minutae, mountains of minutae heaped by the Reverends who were unborn then yet "know" the motivations for everything? Now that might be an incentive, a chance to exhibit paranormal powers not possible by ordinary mortals uncertificated as amateurs by the Power of Morse.

Maybe it would be nice to be an Absolutist, a Correctivist who vehemently commands strict obediance to certain things, certain technologies, certain antennas, certain jargon and phraseology, and The Way To Do Everything? No, that's just too rigid, too inflexible, non-adaptive, marching-in-ranks hive mentality where one is spoon-fed only the True Gospel according to the Church of St. Hiram, the god of Ham. That's kind of low on the list, too much like those Al Quaida Believers. Besides, it's too much work to memorize all those monthly

QST ads so that one can go the Zen route of Being One With
The Latest Radio Technology, knowing All About Radio as a
result.

Maybe it would just be a fun hobby? That sounds okay.

NO! NO! HAM RADIO IS A SERVICE, IT IS NOT A HOBBY!
shout the Absolutists, marching in ranks in amateur uniform
with ham medals tinkling on their manly chests, waving their
ARRL PR news squibs like swords.

Definitely NOT a hobby or recreation. I'm told (more than once)
that it is Dedication...working at it like I've never worked for
anything else in my life. The Don Quixotes shout and swear
much and their misery mules kick and carry on that it cannot
ever be enjoyable...it is duty, honor, tradition that Must Be
Upheld In A Neverending Dedication...Forever. Uuuugh!!!

Hmmm...I'm kind of running out of motivations. Maybe you can
supply a few? I would be obliged.

>BTW, I heard Jim's looking for a prison artist to get a tear tattooed
>on his cheek bone in your honor. ;^)

Oh! That would be so touching!

Does Elecraft sell a do-it-yourself tattoo kit? Reverend Jimmie
could do it hisself and then brag about "designing his own
tattoos!" :-)

I'm surprised no one remarked on a classic novel of absolutist
morals, "The Scarlet Letter." A red "A" for Amateur might
be appropriate or a red "H" for Ham...but no doubt the dispute
of the one versus the other holds some folks back.

I take it that "Bullshit" means "I wrote it; they found it; they
re-posted the quote". What interpretation is necessary, Leonard? You
wrote the statement.
You haven't taken a single step toward bringing it to reality.

> >Of course there is no time frame mentioned, and it is always possible he

> Life that requires some kind of Right Attitude just like
> Jimmie's, Kellie's, Steamy's (Sgt HAH Putz, that is),
> the Colonel's (when he isn't innovating order-wires).

I'd have thought that you'd have had enough twisting in the wind for a while.
Your often-repeated statements that I claimed origination of the idea for use of a CW order wire aren't borne out by a google search. In fact, Google reveals just the opposite, a statement by me that I had to work with what was in place. Then again, you don't have much of a reputation for fact--witness your "Key Officers list" statement. It has been a bad week for you, Len.

I would imagine that there any number of things you've never heard of
and which you had to look up. Then you begin posting about them as if
you were an expert on the subject. You know--sort of like what you do
about amateur radio.

> Go ahead, go nuts...

> governing entities.

The ARRL doesnt speak for all amateurs. That's the problem here. They actually think they do.

>The bulletins that it transmits meet every
> standard of permissible transmissions set forth by the FCC.

WHOA! Hold on a minute buddy. Im no fan of K1MAN or his antics but the W1AW station isnt conforming to Part 97 or Good Amateur Practice either.

Try holding a CW QSO on any of the W1AW Bulletin frequencies right before the ARRL CW bulletin commences. What you'll find is that the bulletin will begin REGARDLESS of the existing QSO which means that the W1AW station is either: A. Not following good amateur practice by knowingly interferring with an ongoing QSO or B. The bulletin begins broadcasting automatically at the scheduled time, which means that there is no control operator present in the shack at the W1AW station in Newington. Either way, whether preadvertised or not, these are both clear violations of Part 97 and Section 33. No-one has taken them to the mat yet.

Keep in mind, just like K1MAN, the ARRL doesnt own those frequencies either. Out of 636,000 U.S. hams, only 157,000 are league members. The bands are supposed to be for EVERYONE, not a vocal minority.

Try this experiment, I have.

Thanks for the really lengthy history lesson. If your legal name is "ADA", perhaps you can claim that you worked "24/7". Otherwise, your statement is false. You went to a lot of trouble to post three paragraphs of crap to cover your lack of answer for the question asked of you.

Wrong, Bucko. Never stated by me. It has been denied repeatedly and Google backs me up. Twist in the wind--like you're doing in your false "Key Officers" claim.

> of a "CW order-wire on an RTTY circuit" was a "neat
> idea...

Yep, I said that. It didn't take me long to see the value in it. That has been explained here several times.

> ...something to impress the troops, few of whom had ever
> worked commercial HF communications.

I've never stated anything like that. I made the statement in response to some clown--I think it was you--who stated that the government didn't use CW.

> You didn't expect
> that someone who HAD done that would stuff it up your nose.

Right. I didn't expect that to happen and it never did.

> Then you backtracked and said it was "State Department
> radio procedure." Oh, sure, first it is "your" idea then it is the

Nope. I forgot that in addition to not being a licensed psychologist or radio amateur, you aren't an ARRL member. Page 5 of the January 2003 issue of QST says (in the fine print despite what Brian says): Subscription rate for libraries and institutions is $39 per year." No membership for libraries but you get some more egg for your own mug, Len. Pass some to Brian.

Why does he need a phone? He'll just whip out one of his
handy dandy snazzy do-all 2-meter CB radios and do an
autopatch to order a double-cheese works pizza.

>
> I think it's merely that it's harder to attract attention using CW.

I find that I can attract a lot of attention on CW with just my
homebrew 100 watt transceiver and trap inverted vee antenna. It's a
little harder with my QRP rig, but not by much.

From actual observation I can say that violations such as jamming,
obscenity/profanity, and failure to identify are uncommon in amateur
radio as a whole, and extremely rare in the CW/digital parts of the HF
bands. In the past 35 years of operating amateur radio CW I don't
recall a single instance where I heard obscenity/profanity on CW in
the CW/digital bands. Can you say that about the 'phone bands?

FCC enforcement actions today are largely complaint-driven. Somebody
sends a credible complaint (such as audio tapes with
time/date/frequency clearly marked) to the FCC, and FCC follows up
with their own investigation. Why are there so many complaints about
'phone but so few about CW and digital?

If the use of a certain mode results in far fewer violations by those
using the mode, doesn't that make the mode somewhat better?

But make no mistake, they are a useful solution to some HF antenna
problems, and are
> in useful service at some ham stations where multiple antennas of better efficiency are
simply not
> possible.

Multiple antennas are not needed for greater efficiency. Despite the
disinformation spread by some, a dipole is NOT a one-frequency
antenna.

For example, a parallel or trap dipole, or a G5RV of equivalent size
will easily beat the WBFD in efficiency. Or the classic
dipole-fed-with-open-line and a tuner will do the job on practically
any frequency. AG6K's article on simple balanced tuners (see his
website or QST for February, 1990) pretty much rules out any cost
advantage of the WBFD.

>My only experiences with the B&W WBFD (at work) surprised me very
much. They performed much
> better than I ever expected, having previously viewed them as aircooled dummy loads.

A lot depends on the frequency used, propagation, power level, etc.
Only really useful comparison would be if you had a high-efficiency
antenna for comparison.

Heck, I made over 300 QSOs in the past two CW SS contests with just 5
watts output. That's 13 dB lower than my 100 watt rig.

> Clearly their
> efficiency is variable and beyond the fact that maximum efficiency must be limited by the

That's one solution. I use trap dipoles with homemade traps - can
cover two bands without adjustment, and most HF bands with just a bit
of help from the tuner.
>

Exactly. I have been saying this, but you have expressed it in more detail and more eloquently than I have. One just has to go to a Hamfest and/or club meeting and non-Hams will see the typical Ham. Societal misfits, fat, obsessed, cult-like, and a fantasy of importance.

I agree. Those of us who get involved in the scratchings of the gas
bags apparently either have too much time on our hands or we have a
problem with priority-setting. Which needs fixing. I suggest that we
stick to ham radio and let The Pointless Duo babble at each other.

>
> It's not about wether or not these kids did or did not have comprehension
> of the material.
>
> It's wether or not you said what you said.

Exactly. The issue is whether Mr. Anderson accused the ARRL of
"dishonesty". He claims not to have done that. My earlier post showed
that he accused the ARRL of "very mild fraud", which by any rational
definition means he accused them of dishonesty. (Anybody ever see
fraud committed honestly?)

Note how Mr. Anderson attempts to evade the actual issue and attacks
the messenger.
>
> You have not answered why you made an accusation you ahve not backed up
> with evidence.

Actually, Steve, that should be self-evident. Mr. Anderson thinks that
his own personal observations of six-year-olds proves that the two
children could not have passed the tests honestly. As Dee, N8UZE,
points out, there is no requirement that a person be able to read and
write in order to pass the exam. The testing of blind persons comes to
mind (Braille exams may not be universally available).
>
> >I would assume that nearly all parents of THEIR children
> > would claim that...(SNIP)
>
> Quick, Lennie...remind us how many children YOU have sired and raised?

That's irrelevant, Steve. The issue is whether Mr. Anderson accused
ARRL of dishonesty. The answer is YES. Is there any credible evidence
to back up such a claim? The answer is NO.
>
> >I still don't "present any proof" because any trip to a large

> > market with kids in tow of mamas or any visit to a first-grade
> > classroom will demonstrate to ANY observer that first-graders
> > do NOT have adult or even teen-age reading ability OR
> > comprehension of difficult subjects involving science and law.
>
> The "proof" is you delivering the hard evidence of YOUR allegations of
> dishonesty.

Note again how Mr. Anderson uses his own personal observations as if
they were universal.

I have known six-year-olds whose reading ability was so advanced that
their parent would give them the shopping list and the child would
read help out with the shopping by reading the list aloud and finding
some items on the shelves. (No, the parent did not let the child run
loose in the store).
>
> I for one have no doubt the kids did not use a "cheat sheet" or other
> unethical aid, and I have no doubt the examiners made no effort to "prompt"
> them or "fudge" the grading process.

How do you know, Steve? I don't think you were there. I wasn't there,
Mr. Anderson wasn't there. All we can say for sure is that there has
been NO evidence presented of any rules violations or dishonesty at
that VE session.

The issue is whether Mr. Anderson accused ARRL of dishonesty. The
answer is YES. Is there any credible evidence to back up such a claim?
The answer is NO.
>
> Does this mean the kids "knew" the material? That's irrelevent. If an
> adult can read and re-read a "study guide" to the point of recognizing the
> questions, so what if a 6 year old does it? A 60 year old?

Or a 70 year old? FCC doesn't care - and they're the "expert agency",
right? FCC makes the rules - not me, not you, and certainly not Mr.
Anderson.

For more than 42 years, FCC has used only multiple-choice questions on
the amateur radio written exams. Answer enough questions right without
prohibited assistance (cheat sheets, etc.) and the test is passed. FCC
sees no problem with that system, and also has no problem with young
people getting amateur radio licenses. And FCC is the "expert
agency"....
>
> >>Also never mentioned is the fact that most people taking the test would

>
> Again.

Only Mr. Anderson really knows if he is "lying", Steve. That is, if we
define "lying" as "saying that which is known to be untrue, with the
intention of deceiving others". Perhaps Mr. Anderson simply made a
mistake when he said he never accused the ARRL of "dishonesty".
Perhaps he forgot what he wrote. This newsgroup has provided us with
many examples of Mr. Anderson's memory lapses about what he and others
have written, as well as examples of his errors in logic and
historical facts.
>
> >"Mistakes" again. Sigh. The Right Reverend has wound up his

Why not just say he made a mistake, Steve? That has been proven
conclusively here.

Mr. Anderson does not admit to such mistakes, of course, because he
cannot tolerate, let alone accept, the idea that someone he considers
an inferior (that would be me) could actually find a mistake in his
writing. Thus he fills his posts with name-calling, personal insults,
infantile behavior, claims of being misunderstood, etc., in a failed
attempt to anger those who disagree with him and deflect attention
from the actual issue.

The issue is whether Mr. Anderson accused ARRL of dishonesty. The
answer is YES. Is there any credible evidence to back up such a claim?
The answer is NO.

Why not just say he made a mistake and won't admit it?

> reduced to the point of insignificance.

Well, so you think. Did I miss the debate where that
line of reasoning was brought forth? Seems the FCC simply
judged morse as a test requirement and found no rational reason
for it. Difficulty had nothing to do with...although I'm pretty
sure you'll disagree with that in spite of the lack of any arguments in the
public
record to support your viewpoint.

> It's amazing how our hobby's backward progress has tracked that of

I have every belief that IF a valid "survey" was taken today, pro-code test
would be a minority viewpoint. It was not much of a majority within
the ARRL when ARRL did a survey some time about 1996 or so.

ARRL? K1MAN? Who cares? By your count there are 479,000 of us out here that
do NOT belong to either. And why bother? Why waste the money on either one?
They do not speak for me.

I didn't say they did. I said they are the sole effective
representative. That remains unchallenged.

>>The bulletins that it transmits meet every
>> standard of permissible transmissions set forth by the FCC.
>
>WHOA! Hold on a minute buddy. Im no fan of K1MAN or his antics but the W1AW
>station isnt conforming to Part 97 or Good Amateur Practice either.

>Try holding a CW QSO on any of the W1AW Bulletin frequencies right before
>the ARRL CW bulletin commences.

Why would you do that? There is only one reason, with all the vast
allocation of CW frequencies (that is, every single frequency ham
radio has), why anyone would do that, and that is just to try and make
a point. And a poor point at that.

In all of ham radio, is there anyone who doesn't know when and where
the code practice/bulletins are transmitted? You sound like someone
who would jump in front of an oncoming truck and then while lying
broken on the pavement, proclaim, "I was here first."

> What you'll find is that the bulletin will begin REGARDLESS of the existing QSO...

Well, duh. Are you new?

>which means that the W1AW station is either: A. Not following good amateur
>practice by knowingly interferring with an ongoing QSO...

Nonsense. See below.

>or B. The bulletin begins broadcasting automatically at the scheduled time, which
>means that there is no control operator present in the shack at the W1AW station
>in Newington.

Uh, huh. Have you ever been there? Have you seen the operation? Do you even understand how they do all of that?

>Either way, whether preadvertised or not, these are both clear violations of Part 97
>and Section 33. No-one has taken them to the mat yet.

Sure, if you want to take the narrowest possible construction of the rules, you may be right. The reason given and the slack cut is because of the fact that W1AW transmits their bulletins on 7 or 8 different bands simultaneously, and that it is impractical to "check" each frequency for squatters trying to pick a fight.

The consensus among right thinking amateurs is that the greater good from the bulletin/code practice service overwhelmingly outweighs the apparent violation of the rules because the occasional muck raker wants to jump in front of a truck.

Why don't you file a complaint with the FCC? See how your interpretation of the rules jibes with theirs.

>Keep in mind, just like K1MAN, the ARRL doesnt own those frequencies either.
>Out of 636,000 U.S. hams, only 157,000 are league members. The bands are
>supposed to be for EVERYONE, not a vocal minority.

I repeat, compare the purpose and the service to ALL amateurs of the respective parties plus the history and expected continued effort of the respective parties and weigh them against the common good of ALL amateurs and there is no issue, except for a few rabble rousers.

>Try this experiment, I have.

No thank you. I'm blessed with a little common sense. Find some other windmills to tilt.

>Your diatribes are overwhelming. You support code testing.

I support honoring the laws we have. I don't like the idea that code testing is going away, but , as I have said repeatedly (and within the last 48 hours) that I accept it's demise.

I'm also sorry they stopped making 65 Mustangs...But got over that too.

>Some think it is needed regardless of the ITU requirement. A
>particularly large club began rejecting changes in the code as early
>as 1975 when forward thinking hams begans questioning it relavence.

A "particularly large club" in the 70's.

Now there's timeliness and relevence for ya.

>You are wrong.

Not until you provide some specific cite I'm not. Sorry you "think" otherwise.

>January is about tube radios.

And I SPECIFICALLY said with the exception of items of historical relevence...That article is about history and nostalgia...NOT about excluding new technology.

>Tube technology, Steve, tube technology. Clinging to the past, Steve,
>clinging to the past.

"Clinging to the past" would be publishing stories on tube technology TO THE EXCLUSION of all other technologies.

The January QST ALSO includes items on: A 222mHz transverter, computer interface with the TRX-Manager program, orientation to test equipment for new hams, product reviews on new HT's and weather station, plus the usual operating articles, ads and other "human interest" items.

Within the first 12 pages of QST are ads for all sorts of new technology, INCLUDING I-Link soft and hardware. Not a single tube in sight.

Whew.

Steve, K4YZ

> I didn't say they did. I said they are the sole effective
> representative. That remains unchallenged.

What planet do you live on? Please prove to the group that the ARRL is effective. They've lobbied the FCC for the 60 meter band, the return of half of the 220 band that was previously taken away, and implentation of CC&R administrative law passage.....all for naught. They are losing in excess of 4000 members per year, not to metion that they've been tapping into cash reserves to stay afloat because of their ill funded agendas. The 440 band is on the verge of being taken away. A "Band Defense Fund" was started that has raised about $400K over the last 3 years which is about 5% what a commercial carrier will pay the FCC for a decent amateur band. During the 9/11 disaster the information coming out of Newington was 3 days old in addition to Jim Haynie not even setting foot in NY until Sept 25. Now they are promoting the "Hinternet" which is a pathetic, ill conceived attempt to recruit Technicians more interested in computers than amateur radios as a ploy for these individuals to join their ranks. Even the FCC has recognized that the ARRL doesnt carry any clout any longer, which is why the government doesnt give them the time of day anymore! Where I come from this is called a joke, NOT efficiency. My local Welfare office is more efficient, at least they give out vouchers for free blocks of cheese to people who really need it. Lets not forget that big score they made by getting us the 160KC experimental band. The only problem is one needs an antenna the length of Long Island, NY to work it.

> Why would you do that?

You're contradicting your own previous statements. The league, nor anyone else has the right to interfere with a frequency thats being used by others. Your ill conceived and malafide rationale is that the league has some sort of squatters rights to a particular frequency. I hate to tell you but league membership is dropping by the thousands every year because of the very modus operandi that you're spouting. Just think, in 5 more years you and your league will have less than 100k members while at the same time licensees are on the rise. How do you explain this one? Its thinking like yours that is driving people out and preventing newbies from joining in. In the former Soviet Union, the Politbureau of 42,000 really believed they could control 150,000,000 people. This is the same mindset. THE LEAGUE DOES NOT SPEAK FOR THE HOBBY BECAUSE THEY ARE IN THE MINORITY. And getting smaller every day.....

>> Well, duh. Are you new?

I was first licensed in 1968. What does this have to do with good amateur practice?

> Uh, huh. Have you ever been there? Have you seen the operation? Do you
> even understand how they do all of that?

As a matter of fact I have, and Im still not impressed. Although I must say that I do have a problem with pulling up into the league parking lot and seeing a dozen or so new Jeep Cheokee's owned by the people that cry poverty and desperately want my $39 per year. Personally I liked the old building much better.

> Sure, if you want to take the narrowest possible construction of the
> rules, you may be right.

I know Im right. There is no such thing as narrowly breaking the law. In the future if you're going to lay on the tracks for the league and defend them at least have your facts (and quote the law) straight. The law is the law, and the law is for EVERYONE equally.

RV, did I do good on the "Boinks?" I'm still not sure how they're used.

And good luck sticking to ham radio.

The only cure for the ARRL demise (that is the organization of volunteer rank and file) is to move HQ to Atlanta or Fort Wayne or somewhere far away from Newington and clean house. IMHO this latest K1MAN thing is a canard foisted by the Newington crowd to provide a cause celeb for shutting down W1AW. Then, with no apologies to the rank and file, they can blame it all on Baxter, and with the operating savings and station sell off give HQ another raise. My local bookseller has taken QST off of the shelves so I don't keep up anymore. What did the HQ folks do with their homeland defense grant?

73,
Clay N4AOX

My only problem with k1man is that he doesn't relinquish the frequency before his bulletin. He can't claim its pre-scheduled because thats for club stations only - and k1man is not a club callsign.

Guess there's two problems I have with k1man - to be honest his group (aara), and bulletins attract a lot of wierdo's.

I've read a lot of the material pro and con since my last post, including Part 97 and procedures for revocation. W1AW is also in violation if it fires up on ongoing conversations. RAIN and ARnewsline are broadcasts too, and the definition of bulletin in Part 97 is god awful, so the bulletin/broadcast argument is moot. Whenever definitions are vague, they are held to be meaningless, and the courts always boot any argument until the definition can be clearly stated.

If FCC prosecutes K1MAN for firing up on people, they need to prosecute W1AW for the same thing. Otherwise it is blatant favoritism. Same with K1MAN's bulletin. If they shut him down for his "show", they need to shut down everyone who carries RAIN and newsline. Those are definitely pre-prepared broadcast programs of a pretty high quality. All of it could be, AND IS, "alternately delivered by other services."

K1MAN has said he has a control op, he just didn't open the door when FCC came over to inspect. Since they didn't get in, they don't know if anyone was there or not, although it "appeared" no one was there.

So if the ALJ tosses the broadcasting argument, the control operator argument, and tosses the argument that K1MAN fires up over conversations in progress, what is left?

Lack of popularity and perceived obnoxiousness and the fact that he hasn't been around for 100 years like W1AW, can't be used to justify yanking someone's license.

Someone said there were character issues involved, and the FCC could use those because they are an administrative body and that was a precedent used as recently as the Herb Schoenbaum case. Can someone with the facts (not hearsay or rumors) tell us the character issues involved?

There better be better and different arguments out there, or the guys that want K1MAN off the air are going to be disappointed. My guess is there must be more issues than just these. What are they?

Paul Jennings, (and yes, I am a lawyer ;)

That's quite a unique manner of newsgroup attribution you use, Vipul.
Let me ask--how do you see yourself? Do you see yourself as fitting
into society? Do you believe yourself to be a fully functional, well
rounded individual? In your quest to expose radio amateurs for whatever
it is you believe they are, do you see yourself as having a "fantasy of
importance"? What type of individual obtains an amateur radio license
and spends large amounts of his time complaining that hams aren't like
he believes they should be and that amateur radio isn't what he thought
it would be?

If you were a lawyer you'd understand Part 97 rules just a tad bit better - K1MAN and W1AW do claim temporary ownership of these bulletin frequencies - which you can do. It is after all why k1man claims he can just ride over the top of 14.275 and send his "bulletin" - the fact that its scheduled.

look up 97.113 section D) which specifically states,

"The control operator of a club station may accept compensation for the periods of time when the station is transmitting telegraphy practice or information bulletins, provided that the station transmits such telegraphy practice and bulletins for at least 40 hours per week; schedules operations on at least six amateur service MF and HF bands using reasonable measures to maximize coverage; where the schedule of normal operating times and frequencies is published at least 30 days in advance of the actual transmissions; and where the control operator does not accept any direct or indirect compensation for any other service as a control operator."
97.113 is rules for amateur broadcasting. Schedules and bulletins can only be made by club stations. K1MAN call sign according to the uls data base is classified as "Amateur Individual"

Just like Riley's original letter to k1man,

"It appears that you may be under the misconception that by publishing a transmitting schedule of K1MAN, you have certain rights under Commission rules regarding the control operator and frequency sharing requirements that you would not otherwise have.

With regard to the requirement for a control operator, publishing a schedule does not relieve you of that requirement in any way whatsoever. Section 97.113(d) of the Amateur Radio rules states that by publishing a schedule of transmissions at least 30 days in advance, a control operator of a club station may accept compensation for the periods of time when the station is transmitting...information bulletins, providing certain additional conditions are met. Publishing a schedule of proposed transmissions, therefore, relates only to a club station control operator accepting compensation. We note that this is irrelevant to the operation of K1MAN because K1MAN is not a club station.

Simply put, to the extent that you start your transmissions on top of ongoing communications of other amateur service stations, you will be engaging in deliberate interference, in violation of Section 97.101 of the Commission's rules. No amateur service frequency is assigned for the exclusive use of any station. Your publishing an intended transmission schedule does not exempt you from that rule."

I'm curious of the name of your law firm btw.

Enough about the rational, social persons. What are you and Brian going
to do about it?

> I once
> worked HF "DX" circuits trans-Pacific on a 24/7 basis (meaning
> continuously)...

You did not work trans-Pacific DX continuously. Do try and get it
right.
You worked shifts at a place which was in operation 'round the clock.

> Maybe it's from an interest in technology? No, that can't be
> it for the Prussian Oberst has commanded that "interest in
> radio" ONLY happens when one has an amateur license.

Nope. You can't get anything right this week. You've stated that
you've had an interest in amateur radio for some decades. It can't be
much of an interest if you've never acted upon it.

> From L. Cebik: http://www.cebik.com/t2fd.html

> ----------
> I'm sorry, but what were you saying about tilting the tilted antenna?
> ----------

Cebik gives you a hint and then proceeds to ignore the name of the
antenna.
Do you remember that T2FD is short for Terminated, TILTED, Folded
Dipole?
It would seem that it isn't a T2FD if it isn't tilted. Maybe you meant
T(erminated)FD.

I note the SWR curve using the 390 ohm terminating resistor. Ratios as
high as 9:1 give you an idea that using this antenna with a balun and 50
ohm coaxial cable would introduce even more loss to the system than that
50-90%% wasted in the resistor.

> More examples of non-tilted antennas can be found at
>
> http://www.armymars.net/personal/hamstation.html

Nothing about the T2FD here. Plenty of B&W folded dipoles though.

> ---
> Notice in the following link that the T2FD is matched to 50 ohm
> transmission line: http://www.johncon.com/john/T2fd/

"Matched" is a euphemism. Adding a balun and 50 ohm coaxial feeder only
increases the loss in the system.

> ---
> Now navigate to : http://www.dxzone.com/ and witness the feed line
> used on this T2FD.
>
> Note that in paragraph 3, the 20-40 deg slope is mentioned.

The url provided by you takes me to a main page for dxzone.com. There
is no feedline to witness.

> After Cebik's analysis, where he said, "Perhaps the only advantage may

Sorry, I don't currently have Adobe Acrobat installed on this computer.
I'll check it out in a few days if I remember.

> Must this antenna be deployed with a 20 to 40 deg slope? I don't
> think so. At least the manufacturer doesn't think so.

The antenna is not sold as a T2FD. I don't have any idea of what is
inside the sealed assembly nor do I know anyone who does. There may be
other than a single resistor in it.

> Also notice the similarities to the antennas described as "T2FD" on
> the other web sites. Do you know why that might be?

How many ways are there to make a folded dipole? Can one add a lossy
network to a folded dipole? Can it be tilted? Folded dipoles were
known in radio long before the introduction of the T2FD.
> ---

> for a price."

While folded dipoles offer some increase in SWR bandwidth, they are one band antennas. We were not discussing one band antennas. The paragraph above is simply incorrect.

> ---
> From: http://www.pacificsites.com/~brooke/Ant.shtml
>
> The B&W Broadband Folded Dipole Antennas (ASW-90) U.S. Patent 4423423
> is an excellent receiving antenna for broad band signals like chirp
> sounders. This design is also called a T2FD. The efficiency for
> transmission goes down rapidly below 40 meters.

If a patent was issued to B&W for the antenna, it would have to be somehow different from the T2FD, a Navy antenna brought into amateur use. That would lead me to believe that there is indeed something aside from a simple terminating resistor inside the sealed assembly. Maybe it is the spiffy stainless steel wire which adds even more loss. By the way, I have the assembly instructions for the B&W antenna. B&W does not refer to the antenna as a T2FD.

> ---
> Oh, gosh no! The B&W antenna is a variant of the T2FD? Like Cebik's
> "narrow/short" version?

That case hasn't been made though there are some similarities. The B&W would have to be tilted and we'd have to know what is inside the sealed assembly. We'll discount the lossy stainless steel wire.

> It looks like it's "Dave against the world" again.
>
> Dave, what were you saying?

That only several months ago, you didn't know much about the antenna (like that it was designed to be tilted).

Allow me to recommend the June, 1949 QST article by Countryman. It is entitled "An Experimental All-Band Nondirectional Transmitting antenna (Some Possibilities Offered by the Tilted Folded Dipole). You can also try "Performance of the Terminated Folded Dipole" by Countryman, November 1951 CQ magazine and "More on the T2FD" by Countryman, February 1953 CQ magazine.
The latter two articles can be found reprinted in CQ's "Antenna Roundup" book, published in 1963.

If I were the ALJ, it would be "cease all BC in the phone portions, conduct BC-like stuff on OOK Morse, 15 wpm, on a frequency of your choice in the non-voice portions of the ARS bands, include no more than two subsequent retransmissions on the latest digital fad mode(s), same frequency". Why?, because this is the "alternate service of delivery". Case closed, K1MAN gone. W1AW saved.

> allocation of CW frequencies (that is, every single frequency ham
> radio has), why anyone would do that, and that is just to try and make
> a point. And a poor point at that.

I have been interfered with by W1AW in the past. I was engaged in a
legitimate QSO on the freq, not knowing it was a W1AW bulletin time/freq.
If a regular ham did that to another ham, it would be a violation of the
rules. It's hard to compete with 1500 watts when you're only running 100,
or even QRP.

> In all of ham radio, is there anyone who doesn't know when and where
> the code practice/bulletins are transmitted?

Obviously I don't, and I'm sure most other hams don't, either. I'm not an
ARRL member, so why am I supposed to know when & where W1AW will pop up?
It's not my responsibility to stay clear of the freqs they use, since I'm
licensed to use them too. Obviously, if I know when a broadcast is going to
start, I'd stay clear, but if I'm in QSO already, they should wait for me to
finish.

> > What you'll find is that the bulletin will begin REGARDLESS of the
existing QSO...
>
> Well, duh. Are you new?

And this is legal how?

> he reason given and the slack cut is because
> of the fact that W1AW transmits their bulletins on 7 or 8 different
> bands simultaneously, and that it is impractical to "check" each
> frequency for squatters trying to pick a fight.

So if I wanted to transmit a CW bulletin on several different bands whenever
I want, I can go ahead and do it because it's "impractical" to check for
people already using the frequencies? That's not good practice. The ARRL
is taking it upon itself to transmit on all those different bands at the
same time, so they should find a way to ensure the bands aren't in use.

> The consensus among right thinking amateurs is that the greater good
> from the bulletin/code practice service overwhelmingly outweighs the
> apparent violation of the rules because the occasional muck raker
> wants to jump in front of a truck.

The frequencies belong to all amateurs, not just W1AW. If someone honestly doesn't know a particular frequency is going to be used for a broadcast and is engaged in a QSO, then they should be able to carry on their QSO without being interfered with.

Nevertheless, I don't think much of K1MAN's broadcasts either. Neither he nor the ARRL owns any particular frequency. I think if an organization or an individual takes it upon themself to transmit an information bulletin, they should first check to see of the frequency is in use or not, regardless whether it's an inconvenience.

>actually think they do.

ARRL speaks for their membership. FCC knows this, and how big that membership
is. The ARRL staff/directors don;t think they speak for all hams, or even all
US hams.

However, when ARRL does something that benefits ham radio, all hams benefit.
Does anyone think ham radio needs LESS rules enforcement? How do you think we
got Riley & Co.?

>33. No-one has taken them to the mat yet.

Or C. There is a control operator present, but it is impractical to check each
and every bulletin frequency before the bulletin begins.

I have been at W1AW when bulletins and code practice were being sent. There was
a control operator present.
>
>Keep in mind, just like K1MAN, the ARRL doesnt own those frequencies either.

True. However, W1AW's schedules are published and easily available. It's a
simple matter to avoid them - just look in QST, or on the website, or invest a

stamp.

If K1MAN follows the same rules that allow W1AW to operate, what's the problem? If K1MAN doesn't follow those rules, it's a different story.

Three questions:

Why have a QSO on a frequency used by W1AW at a time close to bulletins and/or code practice?

Was the band so crowded that it was impossible for you to move a few hundred Hz?

What would you have W1AW do - shut down? Would it benefit amateur radio to eliminate W1AW bulletins and code practice?

>Out of 636,000 U.S. hams, only 157,000 are league members.

I think your numbers are off, but the proportion is about 25%. So what? Is there any other amateur radio organization in the USA that provides even 1% of the services provided by ARRL?

>The bands are
>supposed to be for EVERYONE, not a vocal minority.

The bands are for everyone with the appropriate license to use them.
>
>Try this experiment, I have.
>
Ah - so you INTENTIONALLY set up a QSO on a frequency you knew was used by W1AW, then blamed W1AW for "interference". Was that "good amateur practice"?

Suppose someone waited for a repeater to be quiet, then had a simplex QSO on the repeater output freq. and complained when the repeater ID came on. Would that be "good amateur practice"?

"Por fin!" Let's do it! Let's then make the results of that valid "suvey"
into a petition to the FCC. I'd wager that the majority of the ARRL
membership would have no problem "footing the bill" via their dues to hold
an open election on this issue. I happen to work for a shareholder
communications firm that provides just such a service to a number of clients
and a 700,000 pc. job is no major feat. (Approx. 680,000 licensed folks plus
20,000 or so "interested" parties.) The results of which could then be
submitted to the FCC for their review or "non"-review. It'll never happen,
of course...but it'd sure be nice.

> Still seems to have no impact in the FCC.
> I doubt the FCC cares.

The above just about says it all re. this issue. :'-(

is
> classified as "Amateur Individual"

This is a weak argument and sounds great on paper, but it DOES NOT preclude or give advantage to ANY club or organization from interfering with an on going QSO. Good Amateur Practice calls for requesting the frequency from those in the QSO, or having provisions (in advance) for moving up or down in frequency. It does NOT mean W1AW or K1MAN possess the right to start broadcasting on top of anyone, regardless if they meet the aforementioned criteria or not.

Remember last year that PA contester that was fined for broadcasting on top of two guys who were QSOing in LA? He lost his argument with the FCC and to top it off, the guys who he was interfering with were on the side of his beam which he himself couldn't even hear their transmissions.

The down and dirty facts are the ARRL has gotten away with this for years because no-one has challenged them on it, plus they had the governmental clout. Now their clout is waning due to declining numbers and others are looking to gain from the same applicability of the rule and regulations.

Read my post again. My argument was/is K1MAN CAN'T fire up on
frequency over other hams legally. So if FCC wants to prosecute K1MAN,
they will have to prosecute W1AW, for the same thing, and they
probably do not want to do that. Therefore, they will not want to use
that argument in any real enforcement action, like in front of an ALJ.
No one has ownership of any frequency. Use is all on a first come,
first served, basis.

They also will not want to use the broadcasting argument, since RAIN
and ARnewsline sound like broadcasts too. If they use the broadcasting
argument against K1MAN, then no one could carry RAIN and ARnewsline
either. According to the duck test, all 3 go quack, quack, quack.

The FCC CAN use character issues in enforcement. People have said
there are character issues to consider in K1MAN's operation. My
question was, what are they?

Odd phenomenon there. I've noticed that the signals from the guys who
run serious power into serious antennas are laced with what I call
"high power signatures". Take two signals which tickle the S-meter to
the same level. One is using a big station like Hans has. The other
guy is running let's say a K2 into a dipole like you do. Which happens
all the time depending on the condx & distances involved. It's subtle
and hard to describe but I can usually pick out the sigs from the big
station vs. the little guys. I figger it might be that the big guns'
signals are coming in from more directions and I'm hearing the effects
of the delays via multipath reception. Or something. But whatever it
is about the "high power signatures" I can sense Hans' signal reeked
of it that nite.

There are hams out there who can afford the stuff. The Mil stuff just
doesn't *work* the way hams use HF. How do ya hit the KV4 10m FM
repeater with standard-issue military gear? Then turn around and get
on 75m AM with the same piece of equipment? Where da hell do ya plug
in the paddles??

I have every belief that if a valid "survey" was taken today, pro-code
test
would be a majority viewpoint.

Not that it matters. FCC has made their position on the issue quite
clear.

> It was not much of a majority within
> the ARRL when ARRL did a survey some time about 1996 or so.

A very flawed survey, whose faults we discussed in great detail.

Note that when it really mattered (comments to the FCC in regard to
98-143), code testing was the majority opinion by a slight but
significant margin. And that majority not only wanted code testing,
but code testing at at least two speeds.

>
> Still seems to have no impact in the FCC.

That depends on the issue.

Note that FCC took ARRL's restructuring proposal and went "one more"
in most categories. ARRL BoD suggested 4 classes of license, FCC went
with three. ARRL BoD suggested eliminating one code test speed (20
wpm), FCC eliminated two (13 and 20 wpm).

About the only place where ARRL's proposal struck out was the "instant
upgrade" of all Novices and Tech Pluses to General, and the related
Novice band "refarming".

Which is why those numbers and percentages should be made public.
Remember, it was NCI's Executive Director who made an issue of ARRL
membership numbers and percentages, not I. Let's see - 25% of US hams
vs. less than 0.5% of US hams - which group is more representative?

Funny - nobody has yet identified these groups. They were once quite
influential.

Same here. We're basically in a holding pattern until S25.5 is
changed, and the changed treaty (yes, it really is a treaty) is
ratified by the US.

However, note this simple fact: Hams today still use Morse. In fact,
it's the second most popular mode on the HF/MF ham bands. Keys,
keyers, Morse software, and CW transceivers are being made, bought,
sold and USED today in large numbers. In fact, there are probably more
hams on the air today using Morse code than at any time in the past.

Hardly "clinging to the past".
>

> Now there's timeliness and relevence for ya.

The fact of the matter is that FCC proposed a complex, "two ladder"
license system in 1975, with seven license classes. One of those
classes (Communicator?) would have had no code test, and very limited
VHF/UHF privileges.

But most hams (not just members of any club) opposed such a system,
and FCC eventually gave up on the proposal.

This was almost simultaneous with the idea of taking 220 from hams and
creating a new "Class E" cb band. Lotta weird ideas back then. Musta
been the bell bottoms and platform shoes.
>

Are tubes no longer used by hams?

> > Clinging to the past, Steve, clinging to the past.
>
> "Clinging to the past" would be publishing stories on tube technology TO
> THE EXCLUSION of all other technologies.

Exactly.

Would it be better if car magazines no longer printed articles about
'65 Mustangs, because that would be "clinging to the past"? How about
listening to "oldies", or classical music - all "clinging to the
past", right? Would it be better if all vintage airplanes were
grounded and antique cars removed from the road, because those things
are all examples of "clinging to the past?

I don't think so!
>

There ya go, Steve, confusing the issue with facts.

Here's a question: Should QST refuse paid advertisements for things
like telegraph keys, because some folks consider such things to be
"clinging to the past"?

Only once have I heard "strong" language on a digital mode. Someone was giving out a tongue lashing to another on PSK31. Okay-maybe a keyboard lashing. It was deserved though, the guy was running waaay too much power and way overdriving his audio, and taking up half the frequency. That's it. One case.!

OTOH give me 30 seconds on phone and I'll give you swearing, malicious interference, poor operating practice and a host of other unpleasantness.

No Jim, it doesn't make the mode better. What it means is that the people who partake of that mode are more gentlemanly or gentlewomanly. They also "play nice".

You mean they "protectify us" like the Dalkon Shield prevents
unwanted pregenancies and fuel tanks in the Ford Pinto and
saddle-mounted GMC Pickup were "100% Safe" in the
event of a car crash?

Oh boy whoop-diddle-dee-doos I feel much better already!

> Be glad for them and tune in to 3860 LSB every night at 8pm to find
> out the real truth from these great Americans.

...more like Glad-baggie wrapped AmeriKKKans - grin.

The night before last "Orange Blossom" came up on 3.860 LSB
[without the benefit of a proper FCC issued callsign I may add]
and informed the assembled bib-overalls wearing masses
that the USAF was in a "live fire aerial dogfight" over Mexican
and USA (Texas) airspace with Russian and Cuban MIG's.

This all had something to do with illegal
aliens [...from the planet Remulac ?] allegedly
crossing the border to pick or pack lettuce and
cucumbers in crates for Texas growers...I think.....
it was a rather surreal moment you see.

Guess what, these nitwits on 3.860 believed it!
But then again what do you expect from a pack
of fools who thinks that Alex Jones and Jeff Rense are
accurate sources of news and information? I bet they
really miss Art Bell too - grin

Oh well, enjoy these RF militialoon clowns on 3.860 now before
their each hoisted up by their own pitard from paranoid
stupidity, thus ensuring by their own from their actions
when they go the way of David "boylover" Koresh, Tim "OKC"
McVeigh, William "pale of horseshyte" Cooper, Steve
"Col nutcase" Andersen and shoebomber Richard Reid.

Yup, 3.860 LSB from 8-9 PM! It draws em in
just like rednecks flock to an NASCAR

or Earnhardt #3 memorbilia show. Plus more
bootleggers too using fake callsigns - just like that
KB8--- what checks in nightly
and don't appear on qrz.com or the FCC database....

Hmmmmmmmmm..... (*ring* Hello...FCC..?)

> A fortiori. Suffolk U. Law 93'

Okay Mr. V., see if you concur,

Ab initio, the K1MAN bulletin was predicated on a faulty definition. A bulletin is not a broadcast. Ab extra, the bulletin sounds like a broadcast. The argument could go on ad infinitum. As an amicus curiae, I find his arguments specious and ei incumbit probatio qui. If the program were a bona fide bulletin, then by consensus, cadit quaestio. After researching some of the output of that station, I certainly find some of the statements made by him to be contra bonos mores. However, coram non judice, it is up to the ALJ, in its jurisprudence to decide de lege lata de intego. De jure, Riley Hollingsworth should be able to effectively communicate that as the representive of the de facto corpus. Ex facie W1AW and K1MAN are both probably ex cathedra non, barring faciendum. After studying the facts, I find them both in delicto. Inter alia, I find them both redundant, in the sense that print and internet supercede any need to disseminate their material on the ham bands. Apparently the locus in quo is about to shift to 14.275 on Saturday, probably indicating mens rea. Although, that move is non constat, vis a vis its permanence. I still think K1MAN bears the onus probandi if he wants to continue his "bulletin." Although prima facie, prima impressionis, I think he would lose, and ergo, begin the process of winding up, if he ever appeared in front of an ALJ. On the other hand, I would probably defend either Baxter or ARRL pro bono, if they asked, just because the FCC definitions of broadcast and bulletin are just so much bovine scatology, and deserve to be shot down, so they could be replaced with meaningful definitions.

Go easy, Brian, it's probably all he knows. :-)

Several years ago I was in a discussion of RF circuits and
mentioned a "2N918."

A long-time ham overheard that and asked, with a straight
face, "What country is that? A little island?"

Another turned to him and explained it was a transistor,
one of the first to have a transition frequency (f-sub-t)
close to microwave region, first appearing in the early
1960s. [about three decades before that discussion]
The 2N918 and its cousin the 2N2222 are still on the
market and available today. :-)

Reproduce anything you want. Create hordes of bastard
Truthspeak statements. Go forth and populate the
newsgroups as revealed in the Good Book of the Church
of St. Hiram. Strike down dissenters. All for the glory of
your personal Honor.

It seems Very Important to the colonel to attempt intimidation
of individuals who do not agree with him...whether licensed in
amateur radio or not. He seems to be one of the Holy Men
to an Inquisition to preserve and protect the Old Ways and,
more importantly, his visible honor.

Amateur radio policy matters are well down on the list.
What matters most is PCTA "personal honors" at stake,
that their Truthspeak is true when it is not.

Kellie can't. Like all severely-injured-in-the-ego PCTAs, he
has, like the colonel and the reverend and Putzieboy in TN,
got to keep on, keep on, keep on their attacks on NCTAs
who have caused them to lose their Face.

They alone are "defending the 'honor and virtue' of ham
radio because They ARE ham radio. [they are only
defending themselves but have to rationalize it somehow]

You can imagine how that trio (and pet misery mule) would
fare in a community meeting over, say, antenna erection
with their non-ham community people NOT agreeing with
them. They would LOSE IT big time and thereby do a
negative for ham radio after they stopped sputtering, name-
calling, and general self-propelled-self-promotions. :-)

Bringing WHAT "to reality," Herr Robust?

Following your Orders of the Day?

Ich nicht bin ein Berliner you sour kraut mit mini-weenie.

>Sure you did. Nice attempt a dodge. It fails, but nice attempt.

I drive a Chevrolet, not a Chrysler product. I dodge all
vehicles that are errant.

>Just take the heat coming to you and suck it up, Len.

Another Order of The Day from the colonel.

Go such an 807 plate cap...with the HV on.

>When you go into
>your capital letters mode, you simply appear frantic.

Tsk, tsk, tsk. That must be a capital crime.

>That isn't clear at all, Len. You did write what had long been
>attributed to you. That says it all.

No problem here except that the prissy pedanticists
love to take statements out of context when it suits
their purpose.

The sour kraut better strike for making this an exclusive,
moderated newsgroup to ease his discomfort. Poor baby,
doesn't realize that Preparation H is not a relief and the
"H" doesn't stand for 'ham.'

>Why should you be believed now? Your first statement to that effect
>proved to be a crock.

Most of the colonel's Orders Of The Day in here fit into a
crock. A very big crock. And the crock doesn't like it.

>I'd have thought that you'd have had enough twisting in the wind for a while.
>Your often-repeated statements that I claimed origination of the idea
>for use of a CW order wire aren't borne out by a google search.

They were borne out by a DejaNews search, boy. Lots of
your output were seen by many.

Like all officious PCTAs you want to live in Google, rehashing
your old outrages until everyone capitulates and you claim
"victory!" Let us take the claim EITHER way...

Using manual CW as an "order-wire" on an RTTY circuit
DOESN'T MAKE ANY SENSE. It isn't logical. It is a
nonsense idea whether done be some embassy staffer
in a third-world country or anyone else.

Just take the heat coming to you and suck it up.

>It has been a bad week for you, Len.

Go back to your remedial arithmetic exercise, colonel.

24 x 7 = 168. Get it?

>> The "proof" is you delivering the hard evidence of YOUR allegations of
>> dishonesty.
>
>Note again how Mr. Anderson uses his own personal observations as if
>they were universal.

I don't work for Universal Studios but Universal City is somewhat
near my residence. The Sheraton Universal Hotel is tall and has
a number of antennas on its top, ideal for covering the eastern and
middle portions of San Fernando Valley. We all live in the same
Universe. [open for discussion on some PCTAs who may not...]

While the above is a blatant Chamber of Commerce plug, it makes
as much sense as some schloomph prissy PCTA-er who is
bitter at not being Universally Acclaimed as THE guru on US
amateur radio.

Shall we all adopt Reverend Jimmie's personal observations as a
Universal truth? Of course. He can accept none other.

>I have known six-year-olds whose reading ability was so advanced that
>their parent would give them the shopping list and the child would
>read help out with the shopping by reading the list aloud and finding
>some items on the shelves. (No, the parent did not let the child run
>loose in the store).

Well, there we have it. Reverend Jimmie KNOWS once again.

More misdirection from amateur radio matters, even away from
all radio into Universal Pediatrics and Words of Wisdom from
the Universal Guru Resident.

>> I for one have no doubt the kids did not use a "cheat sheet" or other
>> unethical aid, and I have no doubt the examiners made no effort to "prompt"
>> them or "fudge" the grading process.
>
>How do you know, Steve? I don't think you were there. I wasn't there,
>Mr. Anderson wasn't there. All we can say for sure is that there has
>been NO evidence presented of any rules violations or dishonesty at
>that VE session.

Very important. ARRL *MUST* be kept inviolate of all transgressions
and suspicions of transgressions lest they defy their own
propaganda. That is Universal to Believers. ARRL does no wrong.
Ever.

>The issue is whether Mr. Anderson accused ARRL of dishonesty. The
>answer is YES. Is there any credible evidence to back up such a claim?
>The answer is NO.

High Crimes Against the State! Kill the Infidels who DARE
suggest the Church of St. Hiram speaks unholy things!

[Reverend Jimmie is warming up, gripping the lectern with
a white-knuckled grip...]

>> Does this mean the kids "knew" the material? That's irrelevent. If
an
>> adult can read and re-read a "study guide" to the point of recognizing the
>> questions, so what if a 6 year old does it? A 60 year old?
>
>Or a 70 year old? FCC doesn't care - and they're the "expert agency",
>right? FCC makes the rules - not me, not you, and certainly not Mr.
>Anderson.

Oh my, the Pediatrician is double-degreed as a Geriatrician?
There is NO end to the expertise of the Holy Men.

>For more than 42 years, FCC has used only multiple-choice questions on
>the amateur radio written exams. Answer enough questions right without
>prohibited assistance (cheat sheets, etc.) and the test is passed. FCC
>sees no problem with that system, and also has no problem with young
>people getting amateur radio licenses. And FCC is the "expert
>agency"....

"As it was then as it is now, so shall it be Forever. Amen."

Ahem. The FCC is a legal regulatory agency bound by law to
regulate all USA civil radio. While they have intelligent radio
and electronics professionals in their employ they are not
necessarily "expert" as indicated in the sermon.

The FCC did not develop the US black-and-white television
standards but approved the NTSC (a US industry group) prior
to WW2...did not develop the US compatible color television
standards but approved the re-formed NTSC recommendation
after WW2. The FCC did not develop the Digital Television
standards (formerly called HDTV) but approved the industry
"Grand Alliance" system. The FCC did develop a workable
TV channel frequency reassignment plan (quite complex) to
allow both simultaneous TV carrier transmission and to free
up spectrum for other radio services (ARRL did not petition
for that available space, apparently not consider it
worthwhile for their membership).

>> >>Also never mentioned is the fact that most people taking the test would

>>
>> Complete the sentence, Your Lameness.
>
>Now Steve - why the name-calling? You're giving Mr. Anderson exactly
>what he wants - an excuse to continue his behavior.

Yes..."bad behavior"...refusal to accept all rulings by the
Church of St. Hiram as gospel, ordained by God.

"Bad behavior"...daring to challenge the all-holy traditionalists
with SUSPICIONS of transgressions.

"Bad behavior"...failing to accept the Words of the holy men
who rule what they perceive to be Their Territory.

"Bad behavior"...not marching in lock-step to the morse beat
nor acknowledging the holiness of the holy men carrying the
Mark of the 1x2.

<snip>

>Steve, Mr. Anderson has been posting here under various screen names
>for at least 5 years. Do you really think his behavior will change
>just because he is presented with facts and logical arguments?

Reverend Jimmie thinks it "improper" to use anything but an
amateur radio callsign on the USA's largest Internet ISP. :-)

Reverend Jimmie thinks it is proper (at least he did not disparage
it) that the rabid Sgt Putz adopted (briefly) the screen name of
"NeverTrustLennie" in a short-lived attempt at public-evidence
LIBEL on AOL. Curious...direct LIBEL is approved, yet screen
names having NO direct newsgroup connection is not approved.
Evidenciary of the extra double-standard at work.

The Reverend thinks it "improper" to NOT "sign" a newsgroup
message...something that is impossible with an all-text
medium.

>> >>Note that Mr. Anderson acts as prosecutor, judge and jury, yet presents
>> >>absolutely no proof whatsoever to support his claims.
>> >
>> > Oooo! A Supreme Judge has Spoken!
>>
>> Nope. Absolue fact. You made accusations you cannot or will not
>> substantiate.
>>
>> You got caught lying...
>>
>> Again.
>
>Only Mr. Anderson really knows if he is "lying", Steve. That is, if we
>define "lying" as "saying that which is known to be untrue, with the
>intention of deceiving others". Perhaps Mr. Anderson simply made a
>mistake when he said he never accused the ARRL of "dishonesty".

I said long ago that certain ARRL activities are SUSPICIOUS.

Others have voiced the same suspicions.

But this newsgroup is polulated by some Orwellian followers (as
depicted in the novel "1984") who live by a credo of Truthspeak.
The "truth" is what They define as truth...whenver it suits their
little purposes. The Church of St. Hiram does Truthspeak as do
some of their holy followers. Reverend Jimmie is one of them.

>Perhaps he forgot what he wrote. This newsgroup has provided us with
>many examples of Mr. Anderson's memory lapses about what he and others
>have written, as well as examples of his errors in logic and
>historical facts.

Reverend Jimmie is now pounding the lecturn, shaking a pointing
finger of Blame in the air, beginning to salivate.

He is on a roll. Let's hope he does not slip on the butter.

Reverend Jimmie seems to think amazon.com is a "bankrupt"
corporation. He has said so at least three times in here. He
insists on that even though last week's business news (as
printed in major US newspapers) told of amazon.com's SECOND
SUCCESSIVE QUARTER OF PROFIT. Another example of
Truthspeak by Reverend Jimmie.

Note: Amazon.com shipping policy is still liberal, offering buyers
much better prices on ARRL publications while ARRL demands
extra for shipping charges ordered directly from Newington. For
the SAME publications.

>> >"Mistakes" again. Sigh. The Right Reverend has wound up his
>> > Sermon on the Antenna Mount...hopefully.
>>
>> I am sure you ARE hopeful...Hopeful that you successfully obfuscated
>the
>> context of Jim's post and hopeful that you can blow enough smoke as to
>avoid
>> the truth that you are caught lying again.
>
>Why not just say he made a mistake, Steve? That has been proven
>conclusively here.

Sgt Putz, a "veteran of seven hostile actions," cannot accept
anything but CAPITULATION. That seems to be true for the right
Reverend Jimmie and the use of Truthspeak.

>Mr. Anderson does not admit to such mistakes, of course, because he
>cannot tolerate, let alone accept, the idea that someone he considers
>an inferior (that would be me) could actually find a mistake in his
>writing. Thus he fills his posts with name-calling, personal insults,
>infantile behavior, claims of being misunderstood, etc., in a failed
>attempt to anger those who disagree with him and deflect attention
>from the actual issue.

Reverend Jimmie seems to be entering a religious trance,
repeating more Truthspeak mantra.

>The issue is whether Mr. Anderson accused ARRL of dishonesty. The
>answer is YES. Is there any credible evidence to back up such a claim?
>The answer is NO.

Ah...the fraternal form of the Spanish Inquisition! :-)

Apparently the job of Chief Inquisitor is open and Reverend
Jimmie is striking for that rating. Doing good, boy, keep on
with the Big Lie technique.

Focus on individuals who don't agree with you. Make them
a prime suspect. Amateur radio matters are far down on
the list. Intimidate individuals who don't agree with you in
any manner possible, keep after them, silence them so
that all in front of the pulpit meekly agree to your
Truthspeak. That way lies Serenity and Nirvana...all
Believing in the tenets of the Church of St. Hiram.

Brook no dissent! Quash, destroy the heretics!

Way to go, Jimmie!

>Note how Mr. ANderson never does tell us his motivations.

Good phrase! The Chief Inquisitor's job is practically
a shoo-in for Jimmie.

EVERYONE *CONFIRM* THEIR MOTIVATIONS!!!!

Reverend Jimmie DEMANDS motivation. All supply them or ye shall be tied to the stake and the burning bush applied at the feet. Those who are "truly speaking" will not be harmed. Those who "lie" will of course die for they "lied before God" and He did not intervene.

Neato way to go, Inquisitors, a built-in confirmation of your "holy actions" so that ya'all "speak only the words of 'truth'" about the Church of St. Hiram.

<signature here as required in the sermon>

The multipath theory is quite plausible. There's also the possibility
that the 30 over big gun is being heard predominantly via low-angle
propagation, while the 30 over little guy is much closer and being
heard via a high-angle path. Or some such variation, needs more
research, will hafta run some power next SS for research purposes.

> in the paddles??
>
'zactly.

I recall when multi-knob synthesis was all the rage. No dial - rig had
a row of knobs calibrated from 0 to 10 and you just set the freq
desired. There's a common surplus rx (R-1051) out there which uses the
scheme. There was also a trx version. QST and other ham mags had
articles on such synthesizers, and B&W put out the 6100 transmitter. I
actually owned the original W3QLV homebrew "xtal vfo" unit for a
number of years. Just set the knobs to any integral kHz in the 80 m
band, and zero with the 1 kHz vernier.

Only thing was, those setups were the pits for the way hams actually
operate.
>
> > With a few exceptions, most WW2-vintage surplus was better utilized by

>

True to a point, but also it's not ruggedized to the extent needed.

There's an old tale about how the Hallicrafters HT-4 tx went to war as
the BC-610. It's "true" in that the BC-610 was directly derived from
the HT-4. But there were a LOT of changes needed to make the
derivation! Most of them were mechanical and environmental things
needed to keep the rig working in a combat environment. Just one
example: They bounced an unpowered HT-4 around in the back of a 6x6
for a while, and when they opened it up found the final tuning cap
plates all over the inside of the rig (those variables were bolted
together rather than brazed or soldered).

> > The amateur solder slingers are too busy homebrewing or building kits.

Ahh, the old "cut and run" when the cold hard facts cloud the argument. Typical response from a no-name newsgroup bandito.....Sometimes the truth hurts woody.

Just like the ARRL's consistant rhetoric of heinous hyperbole, your response fits the mold perfectly. Suggestion: Instead of paying your $39 for ARRL dues this year, drive yourself over to Woodworkers Warehouse or Home Depot and buy yourself a power tool. At least you'll get something for the $39.

<Chuckling>

Excellent post Paul.

> Ab initio, the K1MAN bulletin was predicated on a faulty definition. A
> bulletin is not a broadcast. Ab extra, the bulletin sounds like a
> broadcast. The argument could go on ad infinitum.

Agreed. I believe the real test here will be whether the presence of any previous equitable enforcement of (or lack thereof) by the government on the part of W1AW et als will be cited a presidence. Lets face it, this statute was originally written with W1AW in mind and W1AW has never really been challenged. Res judicata not withstanding, the matter will be one the outcome of which could cause inter alia kaos (from an organizational and futher enforcement POV). Having stated this, an ALJ will have to take into consideration whether K1MAN was in fact culpable by not subscribing to any of the acceptable relevance criteria and his actions were those of a blatent scienter. Personally, I think they both need exemplary damages per curiam.

> I would probably defend either Baxter or ARRL pro bono, if they
> asked,

Pro Bono!!!! I would think that after 16 years hence your Harvard exit that you still don't have the bill for your AmJur's paid off ;)

> They were borne out by a DejaNews search, boy. Lots of
> your output were seen by many.

Where are those results, Leonard? Google has all the DejaNews material.
I've resposted what was stated. It was not as you claimed.

> Like all officious PCTAs you want to live in Google, rehashing
> your old outrages until everyone capitulates and you claim
> "victory!" Let us take the claim EITHER way...

Please demonstrate that anyone wants to "live in Google". I went to
Google after I got fed up with your repeated, deliberate false
statements. Jim went to Google after you repeatedly denied writing that
you were going for an "Extra out of the box". You were bitten in the
ass by both of those as surely as you were bitten by your stupid
statement about "Key Officers lists". Go ahead, keep up the tap
dancing. I'll be happy to keep this stuff going as long as it
entertains me.

> Using manual CW as an "order-wire" on an RTTY circuit

Face it--some people never understand a concept. It has been explained
often enough for you to have understood it if you were ever going to.

> Just take the heat coming to you and suck it up.

Which particular heat would that be, Len?

If you spent less time trying to convince people you're bright or
knowledgable with the overuse of arcane Latin esoterica and more time
spellchecking your English you might come off as more credible.

E.g.: precedence, notwithstanding (one word), blatant.

The FCC long ago gave the ARRL permission to broadcast messages of
benefit to the ham community. This permission is not given to
everyone for obvious reasons...pretty soon the ham bands would be just
another BCB.

Baxter is generally not listened to by anyone. His broadcasts are done
just to aggravate the small group of politicos who don't care about
ham radio, but are anal retentive when it comes to the ARRL.

That's not what he said. Read the sentence from start to finish;
your only conclusion is that it's completely true and it's been
true since about 1916. It would be even more true if he had
included the U.S. Armed Forces.

You're looking at it from the ARRL's perspective to others, but he
wrote it from the perspective of others to the ARRL.

>Out of 636,000 U.S. hams, only 157,000 are league members.

Doesn't matter. Only a small minority of gun owners are NRA
members, but the government et al see the NRA as representing
all owners and the industry. We see the same situation with
the AAA -- not all drivers are members but AAA is considered as
the representative for all drivers.

You might honestly believe that the ARRL doesn't speak for you, but
amateur radio exists today *only* because of the ARRL. One of dozens
of examples: There would not have been any ham radio after WWI if it
hadn't been for the ARRL's efforts fighting the Navy's desire for all
radio to be under military control.

That's really what it comes down to, Dave. But Mr. Anderson becomes quite
agitated when he is shown to be in error. Note the above comparisons to an old
movie character.
>
>> He was livid with fury and righteousness and took time

Actually, Dave, I'm not much of a DXer at all. I much prefer domestic contests
(FD, SS, CX, SKN, QRP sprints, etc.), ragchewing, and homebrewing/kit building.
To each his own. I did work ZA8AV on 40 CW one evening about 5 years ago by
being the first one on freq when he fired up.

As for family, I don't think I've ever mentioned anything about that subject
here. Nor do I intend to.

More than 2000 years after Julius Caesar crossed the Rubicon, too. 2500 or so years since the battle on the plain of Marathon. Humans still run marathons, by the way - guess we runners are "clinging to the past".

>"Extra out of the box" isn't difficult, even with the incredibly slow 5
>wpm morse test.

Mr. Anderson has said he "knows morse" in another post, but perhaps that was another error, since anyone who "knows morse" in the context of amateur radio should be able to pass the 5 wpm test.
>

>right.
>You worked shifts at a place which was in operation 'round the clock.

Dave, Mr. Anderson obviously suffers from poor language comprehension. He does not understand your radio operations for the State Department. Such misunderstandings and misquotes are common for Mr. Anderson.

For example, in an ARRL-bashing post some time back he described Amazon as a "profitable" company. I responded by referencing Amazon financial numbers on Yahoo that showed Amazon was heavily in debt and losing money like mad. At the time, it had had just one profitable quarter in the the preceding year. Still, Mr. Anderson insisted that Amazon was "profitable" because it had not gone out of business.

Somehow Mr. Anderson twisted my characterization of Amazon. Instead of not being "profitable", he claims I have said Amazon was "bankrupt". But I do not recall ever saying Amazon.com was "bankrupt" - just not profitable at the time I wrote the posts.

Now, do you think Mr. Anderson will be able to back up his claims about what I said about Amazon? Of course not, because no evidence exists. Mr. Anderson has confused "not profitable" with "bankrupt" and will not admit his error.

Mr. Anderson projects his own behavior and feelings onto others. Note how angry, upset and abusive he gets over my calm, reasoned, well-documented posts pointing out his errors.

>> Maybe it's from an interest in technology? No, that can't be
>> it for the Prussian Oberst has commanded that "interest in
>> radio" ONLY happens when one has an amateur license.
>
>Nope. You can't get anything right this week. You've stated that
>you've had an interest in amateur radio for some decades. It can't be
>much of an interest if you've never acted upon it.

Interest levels vary, Dave. Mr. Anderson's interest level has not reached the point of being licensed in the amateur radio service. Is that a bad thing?

Perhaps we should have a nice ragchew on 80 or 40 CW some evening. It would be good to hear tales of Helsinki, Dar-es-Salaam, and other exotic locales from someone who lived there for years, while serving our country's diplomatic mission.

Lots ... (you might as well stop asking ... I am not going to give you a
number, but it grows by about 50 or more per month in an average month
if that satisfies any of your curiosity ...)

> And since there are no dues nor membership expirations, how do you know if
a
> "current member" still exists?

Occasionally e-mail bulletins are sent to the membership ... we have a few
former
members who are now, unfortunately, SKs ... generally a family member
responds
to the e-mail with the sad news ... they are listed "in memorium" in our
member
database as SKs ... sort of like retiring a sports player's jersey/number as
an honor.
However, there are only a few ... like a handfull, literally.

> Where? Where does ARRL claim to speak for all?

Read their filings with the FCC ... they imply that they are
the sole/primary voice of US amateurs ... even though their
membership is less than 25% ...

> ARRL's membership number is clearly stated. Not a secret in any way.
>
> What is NCI's current membership, give or take 1%? Why has that number
been
> such a closely guarded secret?

Because, frankly, we respect our members' privacy and it's not really your
business.

> Is there another amateur radio society in the USA that provides even 1% of
the
> services ARRl provides to the amateur radio community?

I have not faulted the ARRL for services provided ... I have faulted them
for
some bad policies in the past. Remember, I've been a member of ARRL for
over 25 years ... I have the right to complain if I don't like some policy.
I also have the right to oppose ARRL policies I don't like ... and I do.

Only on certain frequencies (certain spots on 80m and 20m and a few
renegade repeaters), and only at certain times. Does giving you 30 seconds
on phone mean on 14.275?

NCI doesn't claim to be THE National Society for Amateur Radio ...
we only claim to represent our members.

The fact that our comments and recommendations to the FCC were
credible and that we were quite sucessful in "restructuring" really seems
to irk you ... if the ARRL's policies and recommendations had been more
in line with the realities of today and the Commission's legitimate
regulatory
objectives, they might have gotten more traction ... ours were ... we got
the traction ... live with it.

It is sad when we lose a fellow amateur. Like N0BK, gone so soon.

But there is also the case of members who have lost interest in your cause. Unless they take the action to request removal from your membership, they will be counted forever.
>
>> Where? Where does ARRL claim to speak for all?

I'm not asking for any information about who is or is not a member. Not asking for calls, names, addresses, or anything like that, so "members' privacy" is a strawman argument.

> and it's not really your business.

No? When an organization petitions the government to change laws and rules, it's "not really my business" to know how big that organization is? Particularly when that organization claims to know what is best for all of amateur radio, including me?

I say it is my business, and the business of anyone else who cares. And remember, it was you who made an issue of ARRL's member numbers. Why does one set of rules apply to ARRL and another to NCI?
>
>> Is there another amateur radio society in the USA that provides even 1% of

And I've been one for 35 years. Big deal.

> I have the right to complain if I don't like some policy.
>I also have the right to oppose ARRL policies I don't like ... and I do.
>
Nobody denies that right - least of all, me. But that right extends to all of us, and includes supporting policies we do agree with.

Seems to me there is no good reason to keep the NCI membership number a secret. If the organization is large, why keep it a secret? And if it's small, one would think you'd be proud of what a small group can accomplish.

--

Ever hear of the "National Amateur Radio Council" and the "Society of American Radio Amateurs", and what they accomplished? Quite interesting, really.

Source record: 60454

Do you think it's time to drop LSB for the lower bands and switch to USB exclusively (like commercial/military) for all amateur bands?

Surely, it was warranted for technical reasons 50 years ago to have selectable sidebands but now it's somewhat silly---and a technically backward practice.

Vipul,

At first I was willing to just accept that you are from a different culture
and perhaps didnt' understand what Amateur Radio was about.

I have changed my mind. I think you understand perfectly, but are just a
non-hacking, selfish little punk with gross anti-social behaviours that will
never been redeemed.

The following is shameful. Not one bit of redeeming, "pro Amateur Radio"
support here.

Just the whinings and snivvilings of a third world punk who think's
America should just stop where it is and change for them.

Read through the following for my comments.

I remember a judge telling a young 15-year-old (me) that "...ignorance
of the law is no excuse..." (riding a motorcycle without a license...)

The times and frequencies of the ARRL bulletins are published and
publicly available. Ignorance of them is no excuse.

>It's not my responsibility to stay clear of the freqs they use, since I'm
>licensed to use them too.

It *is* your responsibility and if you continue your QSO during their
bulletin, *you're* the one in violation of intentional interference.

Their bulletins have been aired daily for over three-quarters of a
century; how long have you been on the air?

>So if I wanted to transmit a CW bulletin on several different bands whenever
>I want, I can go ahead and do it because it's "impractical" to check for
>people already using the frequencies?

The FCC regulations specify the exact procedures for doing just that.

But only as a division and "under the thumb" of the
Radio Club of Hartford. In January 1915 it gained
independence and became the organization that we
know of today. To be exact, on January 29, 1915,
the Connecticut Secretary of State recorded the
incorporation of the League.

> I think it is rather well-known that ARRL can't get as much as a
> whole quarter of US amateur licensees. Since it has never had
> a much greater fraction for 89 years that ought to demonstrate
> something.

In 1916, League members were the only one's permitted on the air
between the hours of 2100 and 0700 (in order to do trans-continental
relaying of traffic and not be bothered by local rag-chewers). That
shot League membership up to 4,000, about 40% of those licensed at
the time.

Who amount to less than 0.5% of US amateur radio. Yet NCI claims to know what
is best for amateur radio.

ARRL IS "the national society for amateur radio" - simply because there is no
other. Doesn't mean they represent all US hams. But when ARRL does something
that benefits US amateur radio, all US hams benefit.
>
>The fact that our comments and recommendations to the FCC were

I don't agree with some of FCC's decisions. Is that wrong? Must I agree with
YOUR vision of the future? That's what "...bring amateur radio into the 21st
century" is saying.

>if the ARRL's policies and recommendations had been more
>in line with the realities of today and the Commission's legitimate
>regulatory
>objectives, they might have gotten more traction ... ours were ... we got
>the traction ... live with it.

Sounds like the rooster taking credit for the dawn. If someone says what FCC
wants to hear, they're going to have a high success rate.

Note that FCC also reduced written testing, despite many suggestions on how to
improve it.

Fact is, FCC wants out of code testing for a number of reasons that have little
to do with the good of amateur radio. Examples:

- FCC doesn't want all the admin work of medical waivers.
- FCC doesn't want more petitions for or against code testing
- FCC thinks that if code testing is removed and written testing reduced,

people who formerly went to cb or freebanding will become hams, thereby reducing enforcement headaches.
- FCC thinks eliminating code testing will somehow cause hams to become "more technical", even though the dropping of the code test from the Tech a dozen years ago shows that doesn't happen.

To what avail? What benefits would accrue the service, the hobby or
Joe Ham if we all went to USB?? The commercials and military don't
have the LSB/USB option, we do. Strikes me that they're the
technically backward in this game.

It was particularly satisfying seeing Jims message about VE exams not being monitored. Where have we heard that before?

And then Dave had to go back into the annals of amateur history to "prove" that a ttfd MUST be tilted, regardless of what Cebik and the manufacturer says.

And Steve says they don't cling to the past.

its been a few years, but i do believe that the radios i had in my radio room when i was in the navy had lsb on them. cb's have both usb and lsb and they use them interchangeably, for those cb'ers that use the 40 assigned channels using both sides can essentially double the number of channels as you can use usb and lsb on the same channel and not interfere with each other (much).

as far as 50 years ago, the original reason for lsb on the 'lower' bands and usb on the 'upper' bands was not 'selectability' but lack thereof. it was easier to build a radio with an IF in the 10mhz range and only use one filter... the result was that you heard a different sideband when mixing up to 10mhz than mixing down to 10mhz... adding selectability is a more advanced feature and adds flexibility to our operations. using even more advanced dsp techniques it is even easier to generate all the various modes with only a change in software.. it would be a technical step backwards to remove the capability to generate and receive lsb. to paraphrase the gun lobby... make lsb criminal and only criminals will have lsb. you would serve us all better if we could get quicker access to high tech hopping equipment so we can figure out who some of these hopping intruders are rather than trying to remove capabilities that are perfectly good the way they are.

for us hams i would think that mixing sidebands on a band is not so good, so a convention for each band is a good idea... and since we already have one that everyone already knows and there is no good technical reason to change it, its probably best to leave it alone... after all in a few years digital voice will replace it all and the current sideband allocations will become an ancient artifact anyway.

Well there's no requirement that we continue with this practice but it would be difficult to change longstanding habits and customs.

I think the radios should to have this choice available though even if people were to switch.

If they said "A National Society ..." I wouldn't have a gripe ... it's the arrogance of attempting to project that they are "the only game in town" in terms of a voice for (all is clearly implied) hams that gripes me.

> Doesn't mean they represent all US hams.

They sure bend over backwards to imply it ...

> But when ARRL does something
> that benefits US amateur radio, all US hams benefit.

I agree ... and when they do, I acknowledge it and complement them for it ... when I think they're screwing up, I say that, too ...

Note that NCI has gone beyond its normal topic on a couple of occasions (like the ARRL's Petition for Reconsideration on extending PRB-1) and filed comments wholly endorsing and supporting ARRL's position ... because it was "the right thing to do" ... and having done that, we got flamed big-time here for having done so ...

I/we are not "anti-ARRL" ... we simply oppose some of their policies that we think are bad for ham radio (with the focus, of course, on the Morse test issue).

> >The fact that our comments and recommendations to the FCC were
> >credible and that we were quite sucessful in "restructuring" really seems
> >to irk you ...
>
> I don't agree with some of FCC's decisions. Is that wrong?

Of course not ... you have every right to your opinion. However, there are people who, what? 50 years later, are still pissing and moaning about when Generals lost some privs when the extra class was created and every couple of years someone seems to file a petition with the FCC asking that they (however few of them are left who haven't upgraded) be "grandfathered."

The FCC has consistently said "No."

The FCC said "No" on more than 3 classes of license and more than the
5 wpm code test that they judged necessary to remain in compliance with
the ITU Radio Regulations ... several people petitioned for reconsideration
and were denied. What part of "No." don't you people understand? And
are you going to grouse about "restructuring" for the next 50 years? If so,
I can always put you in my "kill file" ... but I'd rather NOT do that
because
when you're not grousing or looking for ways to attack NCI, you often
have some intelligent, worthwhile things to say.

> it's "not really my business" to know how big that organization is?
> Particularly when that organization claims to know what is best for all of
> amateur radio, including me?

Any individual has the right to petition the FCC for changes in the rules.
A lot do ... many of them are stupid ideas and the FCC rejects them,
either out of hand, or based on opposition in filed comments.
So "How many members do you have?" is not a determining factor
in whether a petition/comments/or other filing "gets traction" ... at the
end of the day, it's "Does this make sense? Is it within the Commission's
authority and policy objectives? etc." Once again, making FCC rules
is NOT a "popularity contest" ... it's a fact/logic/public interest-based
process.

As a closing note on the subject of the precise size of NCI's membership.
1) I have no intention of telling you
2) It grows almost daily, certainly monthly
3) The size is, as I have stated above, irrelevant, it's the quality of its
policies
and arguments before regulators that counts.

>filter... the result was that you heard a different sideband when mixing up
>to 10mhz than mixing down to 10mhz...

Except that it doesn't work out that way.

It's true that if you use a 9 MHz filter or phasing-type SSB generator and a
5-5.5 MHz VFO, you can cover both the 80/75 and 20 meter bands by using either
the subtractive or additive mix. (9-5=4, 9+5=14). A very convenient and
inexpensive way to cover the two most-popular HF phone bands with a single
mixer and VFO range.

But the sidebands are not inverted by that mixing combination. For sideband
inversion to occur, the heterodyne oscillator must be higher in frequency than
both the input and output frequencies.

The old SSB rigs that used this mixing scheme had sideband select switches.
Many of them were phasing type, and sideband selection was a matter of a phase
reversal in one of the audio channels.

If you use a 5.25 MHz filter or phasing-type SSB generator and an 8.75-9.25 MHz
VFO, you can cover both the 80/75 and 20 meter bands by using either the
subtractive or additive mix, and the sideband will invert on 80/75 meters. A
few rigs used this method (National NCX-3 and 200, most Swans) but they didn't
appear until long after the amateur USB/LSB convention was well established.

>adding selectability is a more
>advanced feature and adds flexibility to our operations.

Agreed! The added complexity is minimal.

This has turned into a pretty interesting thread. After doing a lot of reading, it looks like the majority of folks on this NG don't like K1MAN, but some people like W1AW, and think W1AW's bulletin service is worth preserving. So how would the FCC prosecute K1MAN while leaving W1AW intact?

Regarding 97.111(b)(6).

The FCC didn't give "anyone" the "right" to "broadcast."

Licensees (not anyone) are accorded the privilege (not a right) to use the amateur bands by the administrative body (FCC) pursuant to obtaining a license and following the rules set down by the FCC. One of the privileges licensees may avail themselves of, is the dissemination of certain types of bulletins (which are specifically NOT broadcasts).

When W1AW and K1MAN begin their bulletins on top of other licensees using the frequency, is that legal? In Riley Hollingsworth's opinion, no. "No station has exclusive use of any frequency." See his January '02 letter to Glenn Baxter.

Do I think W1AW and K1MAN should be prosecuted for that apparent rules violation? No I don't. W1AW has a long history of helping hams learn code. It's a real service to the community. Most hams move when W1AW fires up over top of them, probably in deference to tradition, and in recognition of W1AW's long service. So, I'd like to see the FCC look the other way on that issue.

The FCC should not pursue a broadcasting complaint either, because that shotgun would hit RAIN and ARnewsline, and other programs that sound like broadcasts. I like RAIN. ARnewsline has some interesting stuff once in awhile. Therefore, I'd like to see the FCC look the other way on the alleged broadcasting violation too.

The FCC should really just clean up the language in Part 97. That would prevent future problems like this from popping up again. However, if the FCC wants to prosecute K1MAN, they should go after some OTHER infraction(s). The question remains; if the FCC prosecuted K1MAN, what violation(s) should they target, assuming they'd like to remove the chaff, while preserving the wheat?

>

true, in fact they specifically prohibit 'broadcasting' in 97.113(b).
97.111(b)(6) specifically allows the transmission of 'information
bulletins'. you must go back to 97.3 to understand the definitions of
'broadcasting' and 'information bulletins'. so on this matter the only
quetion is if k1man's transmission is 'of direct interest to the amateur
service'. this part is of course open to much discussion, some of k1man's
stuff obviously is of direct interest and so is probably ok. but some of
the stuff he does like editorializing against the fcc and other individuals
could arguably be catagorized as being of interest only to individuals and
not the 'amateur service' as a whole... but that is probably such a gray
area that he could tie up the fcc in court for a long time.

on the automatic startup... i seem to remember there was an fcc ruling or
opinion many years ago about bulletin stations starting up on top of
existing qso's. as i remember it the statement essentially allowed the
stations to start up without notice as long as it was a well published
schedule. this makes sense for well published and frequent operations like
w1aw, especially when they occur on multiple bands at the same time....
should it extend to k1man? probably, he has been doing it for a while, and
i assume he has a published schedule somewhere even if i have never seen it.

the one point where the fcc would seem to have a case against k1man is the
purely technical one of station control. according to published reports
they paid a visit to his station while a bulletin was being transmitted and
could not find a control op. this is an obvious violation of station
control rules. that the transmissions are not monitored all the time is
also obvious to listeners at times when the tape breaks or something else
happens and you get dead air, i haven't heard this recently but in the past
this seemed to happen fairly frequently. on this point there can also be no
backlash against w1aw as they have the paid operator there to run the

station.

From K4YZ:
>>True, most Hams are fat. The really obese tend to stand out. This is just
>more
>>confirmation of that.
>
> "MOST" is indicative of a majority. From what assessment do you obtain
>this information in order to draw to this conclusion?

Most implies greater than 50%. Most is incorrect. What I meant is a high percentage of Hams are fat. Also, it is a greater percentage than the general population. I drew this conclusion from seeing Hams at a few clubs and at Hamfests. Also, a survey supports this conclusion.

> I guess we don't know WHY this person is obese, eh? Are we to jsut
>automatically assume that he's just a glutton, or was there some mitigating
>physiological reason? Or was it just a chance for you to make another abusive
>comment on Amateur Radio, Vipul?

There is a high percentage of overweight people in Ham radio. Therefore there must be some behavioral reason. Perhaps lack of physical activity due to amateur radio aspects such as contesting or Worked All States.

>>Yes, invite a non-Ham to a club meeting or a Hamfest. There one can see the
>>typical Ham. The non-Ham will see that Hams are weird.
>
> Yeah...real wierd. So wierd they choose to not hang out with so cool a
>dude like Vipul the Virtuous...?!?! Geeze that IS wierd...

It's not just me, there are many others that believe Hams are weird.

>>"Herb" <Herbie@KingOftheJammers.net> wrote

>>seems to hold true.
>
> Not from what you posted up above, Vipul ! ! ! You have a bit of that
>Lenniesque two-faced thing going on...

No, I said that Hams are not: ex-cons, wife beaters, alcoholics, druggies, nut cases, slobs, fruits. But, many are societal (or social) misfits.

>>Obsessed, cult like.
>
> You are really sick, Vipul. What's with you and obsessions of

>"cults"..?!?!

Pointing it out does not make me one. The Ham radio hobby is very much like a cult. The word "Ham", the use of strange Q codewords, hatred of CBers, Morse code sub cult.*

> "Typical Ham"....Hmmmmmmmmm...Let's see...housewives, college
>students...members of the Armed Forces...engineers (except Lennie)...gas
>station attendants...insurance salesmen...high school kids...members of
>government...heads-of-state...music stars...Vipul Shaw, KB1HMW...
>
> yep...REALLY WIERD!

True, these are the typical Hams. Seems like a normal group. But, when they get together in cult-like activities, then it becomes weird.

VS

---
*The more extreme cult-ers are in: the Wouff Hong sub-sub cult. Its a sub-sub cult because its a sub cult of the Morse code sub cult. Not all Morse coders are Morse code cult-ists, but it is hard to tell the difference. Also the (HT/old radio/morse-code keyers) fetishists, sorry I mean collectors. Please note that these are extreme cases and are NOT typical.

1st of all, he is not religious at all, which is why Al-Qaida hates him, and would like to see him dead, since Iraq is the most westernised country in the Arab world. 2nd, Saddam gives Jews & Christians more tolerance than in any other Arab country. But Zionists, esp. those who claim to be Christians but are not, he hates, esp. Bubya. Even the National Council of Churches condemns Bubya for being a Christian hypocrite, and the message is delivered by Bishop Talvert from Bubya's own denomination in the Methodist church. Tune into KTBN or WWCR, and you'll probably hear those spots.

> CAN YOU IMAGINE THE HAY THAT SHORTWAVE
> RADIO BULL SHIT ARTISTS LIKE ALEX JONES AND
> JOYCE REILY AND JAMES LLOYD ARE GOING TO MAKE
> FROM ALL OF THIS.....??????????????????

Gov't trained kooks are bad enough. On VOR there was a report read from Pravda that a UFO was spotted over Iraq during the last Gulf War, and had to make a forced landing. They speculate that Saddam has alien weapons. No doubt the NASA-trained kook Dr Richard Hoaxland will be on Coast to Coast 1st thing next week to flog an even bigger magic bullet theory.

> I CAN SEE ALEX "HORSESHIT" JONES COMMING OUT

>no
>> other.
>
>If they said "A National Society ..." I wouldn't have a gripe ... it's the
>arrogance of attempting to project that they are "the only game in town"
>in terms of a voice for (all is clearly implied) hams that gripes me.

You are inferring what is not implied. If there were more than one national
society for amateur radio in the USA, then I'd agree with you about the phrase
being misleading. But there is no other "national society for amateur radio".
So ARRL's description of itself is accurate.

I give FCC credit for being intelligent enough to know that the ARRL does not
speak for all hams.
>
>> Doesn't mean they represent all US hams.
>
>They sure bend over backwards to imply it ...
>
I don't see that at all. You infer what is not implied.

>> But when ARRL does something
>> that benefits US amateur radio, all US hams benefit.
>
>I agree ... and when they do, I acknowledge it and complement them for
>it ... when I think they're screwing up, I say that, too ...

So do I. But the point I was making is that ALL hams benefit, even if ALL hams
aren't ARRL members.

Here's an example: Remember ARRL/W1RFI's work with the wireless Part 15 devices
that were chewing up the 80 meter band? That effort eliminated a big source of
harmful interference to some hams on an important HF band. Perhaps more
important, it set a precedent that Part 15 devices could cause harmful
interference to hams, and that such interference must be dealt with by the Part
15 folks - including the manufacturers. Win-win all around, even for hams who
don;t use 80, because next time a mfr. will pick a different band.

Sure, the mfrs, should know better than to put a Part 15 device in a ham band.
But they don't know better, as that example proves.

Now, who is it that goes to bat for Amateur Radio in a case like this? It's not W5YI Group, K1MAN, Worldradio, or even NCI. It's ARRL staffers, paid for by the membership and publication sales. .
>
>Note that NCI has gone beyond its normal topic on a couple of
>occasions (like the ARRL's Petition for Reconsideration on extending
>PRB-1) and filed comments wholly endorsing and supporting ARRL's
>position ... because it was "the right thing to do" ... and having done
>that, we got flamed big-time here for having done so ...

Hold on a sec - I don't recall any "flaming" on that issue.

What I DO recall is a petition to reserve a tiny slice (300 kHz, I think) of some VHF/UHF bands for narrow band modes. The idea was that these segements would be used for CW, SSB, FSK, PSK, etc., not AM or FM. I thought it was a very good idea even though it would have eliminated the only CW-only segments in the ham bands.

Despite the poor choice of name, "No-Code International" was founded as a one-issue organization whose one-and-only purpose was the total elimination of all mandatory code testing for any class of amateur radio license. And at the time of the above petition, NCI was still presenting itself that way. So when NCI came out against the above petition, some of us rightfully criticized NCI for its involvement in an issue that has NOTHING whatsoever to do with code testing. As I recall, the rallying cry was "no setasides for legacy modes" or some such.

The criticism was justified because NCI was getting into areas that are otuside its stated purpose and objectives.
>
>I/we are not "anti-ARRL" ... we simply oppose some of their policies
>that we think are bad for ham radio (with the focus, of course, on the
>Morse test issue).

But NCI's sole stated purpose is the elimination of code testing - nothing else. In fact, Bruce Perens has stated that his intent is/was for NCI to vanish when that goal is accomplished. Which will probably be very soon.
>
>> >The fact that our comments and recommendations to the FCC were
>> >credible and that we were quite sucessful in "restructuring" really seems
>> >to irk you ...
>>
>> I don't agree with some of FCC's decisions. Is that wrong?
>
>Of course not ... you have every right to your opinion.

Gee, thanks...;-)

>However, there
>are people who, what? 50 years later, are still pissing and moaning about
>when Generals lost some privs when the extra class was created

Whoa there! If you're gonna discuss policy, at least get the facts right!

The modern Amateur Extra class license was created as part of the 1951 restructuring, along with the Novice and Technician. The rest of the license classes were renamed. Although that restructuring was the result of years of debate and planning, in late 1952 FCC suddenly changed its mind and gave all operating privs to all hams except Novices and Techs.

Generals/conditionals and Advanceds lost some privs in 1968 and again in 1969 (35 years ago) as part of the "incentive licensing" changes.

If you think the code test debate is something, you shoulda been around back in the '60s. Ten proposals with RM numbers, 6000+ comments received by FCC, lotta bad feelings. Restructuring 2000 was nothing by comaprison.

>and
>every couple of years someone seems to file a petition with the FCC asking
>that they (however few of them are left who haven't upgraded) be
>"grandfathered."

I know of only one or two such petitions in the past 35 years. Can you name the others?
>
>The FCC has consistently said "No."

How many times? How many petitions?
>
>The FCC said "No" on more than 3 classes of license

Hold on!

The NPRM issued by FCC said 4 classes of license. It laid out specifics for the written tests for those licenses, but not for code tests for those licenses. The R&O was very different than the NPRM. If 3 classes of license was a good idea, why didn't the NPRM say so?

> and more than the
>5 wpm code test that they judged necessary to remain in compliance with
>the ITU Radio Regulations ...

Yup. Eliminated all those medical waiver headaches and simplified the admin work.

>several people petitioned for reconsideration
>and were denied.

Is that wrong? Are citizens supposed to take whatever FCC puts out and say "thank you sir" while tugging their forelocks and bowing?

Suppose - just suppose - FCC had done it my way and had gone to four classes of license with code test speeds of 0/5/12/20 wpm. Would NCI have taken that response as a "no" and walked away with no petition for reconsideration? I doubt it very much.

> What part of "No." don't you people understand?

Who is "you people"? Us dirty unwashed masses of hams who use Morse code? ;-)

>And
>are you going to grouse about "restructuring" for the next 50 years?

Not me. But isn't it the right of all Americans to complain about their government and petition for changes? Or is that right reserved only for those who agree with NCI's opinions?

>If so,
>I can always put you in my "kill file" ... but I'd rather NOT do that
>because
>when you're not grousing or looking for ways to attack NCI,

Is criticism of NCI forbidden? Seems to me the same rules that apply to ARRL criticism should apply to NCI criticism.

>you often
>have some intelligent, worthwhile things to say.

Thanks - same to you!

Your right Carl.
There is an awful lot of sickness out there!
It makes me wanna PUKE

Just check out:

"SPACE SHUTTLE COLUMBIA DEBRIS" on E-Bay now!

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=2909705555&category=1468

Plus other "valuable Columbia collectables" now being huckstered like:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3205182333&category=13904

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=2156914118&category=4150

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=3112168639&category=19184

HURRY and get those bids IN before prices go up!

(not to mention that carnival sideshow now takeing place as
I type this on 14.275 with Baxter grandstanding as usual.....)

And you can be sure that all the
kooks on WWCR, WWRB, WHRI
will make more of this than you can believe.
(....their already doin it FREAKIN BIG TIME with the conspiracy fun
in alt.fan.art-bell like you cannot imagine - sit back, watch em spin and
roll Carl! it's the greatest show on earth - not only on 14.275 Ho-Ho!)

Wanna see something VERY curious...?

Go to www.ebay.com and do an Item Search
on the words "space shuttle Columbia"

In just the past hour not less than 100 auctions for
Columbia memoribilia have gone up...

I ain't seen anything like in since Dale Earnhardt
crashed and every redneck in the Southeastrn USA
suddenly put up every bit of Earnhardt Memorbilia they had
in their tacky collections for immediate auction.....

Glub bless human psychology and capatalism eh?

Be sure to check ont 14.275 also! there's a radio
war going on *right now as I type this* btwn k1man's
coverage of the 'Columbia disaster' and the usual
bunch of refugees from the old 14.313 and 75 Meter
wars -

Check the history ... Jon Bloom of ARRL was one who flamed NCI
for "going beyond its charter" ... our *members* had no problem with
us "doing the right thing." Apparently, Jon thought we were treading on
ARRL's "turf" (as if they have an exclusive right or something ...)

They said people are being contaminated by all the biological stuff they had on the shuttle. What a bunch of kooks. I can't believe they give broadcasting licenses to these wack jobs.

How about some examples? I recall Jon's opposition, but I'd hardly call it
"flaming". Did he mount personal attacks, or simply discuss the issue?

>our *members* had no problem with
>us "doing the right thing."

That presumes what you did was "the right thing". Some of us disagree that it
was "the right thing".

>Apparently, Jon thought we were treading on
>ARRL's "turf" (as if they have an exclusive right or something ...)

Not at all. You again infer what is not stated or implied.

Here's the issue: NCI was founded as a one-issue organization that would
disband once all code testing was gone. The current mission statement for NCI
says:

"No-Code International TM is a organization dedicated to the abolition of the
Morse code testing requirement as a prerequisite for any class of Amateur Radio
license. NCI TM will continue as a lobbying organization as long as the manual
telegraphy testing requirement exists."

That's pretty clear. One issue only. And the last bit says that when the test
is gone there will be no reason for NCI to continue as a lobbying
organization.

So when NCI starts commenting on other issues, it IS exceeding its charter. By
definition.

Has that mission changed? If so, the website doesn't say so.

>> >And

>for an answer and get on with life ...

WHOA!

"at *some* point, folks in the minority should take "No." for an answer and get on with life ..."

When (fill in your favorite ethnic minority) people were/are repeatedly told "No" in response to questions about equal treatment in jobs, education, housing, voting rights and/or employment, should they simply "take "No." for an answer and get on with life ..."???

I don't think that's what you meant to say, but that's what the words say. And it sure looks awful.

Who is the minority you refer to? It can't be the procodetest folks.

>> >If so,

Its difficult to change anything in amateur radio because of longstanding hams.

Probably for the same reason that fewer people choose to make objectionable QRM on data modes, i.e. it doesn't get attention. If I tune a rig across a band I can immediately hear it if someone is being objectionable on 'phone, whereas I have to write CW down to read it unless it's very slow, and I don't have the means to decode other data modes. On the other hand, those who copy high speed CW by ear and those who have a computer hooked up to their rig can still (mostly) understand human speech.

they get
> together in cult-like activities, then it becomes weird.

And what about the cult-like activities your into now? You're
posting on the NG using your computer on the internet like all the
other people in the cult of "online"! Think about it have you ever
been to a computer show? Seen all the fat people there who just
sit at their PC online playing games, doing work, surfing the internet.
What about all the code words they use like Hard Drive, CPU,
cache, ROM, RAM, pixels, burning CD's, IOs, USB, and all the
other "CODE WORDS" that are only in the cult of computers?

Look closely enough and you'll find any group of people with
their hobbie act like a "cult" when they get together in a "fest" of
their hobbie. Check out the next Star Trek convention if you
don't believe it. When was the last time you saw someone
walking down the street wearing a mask to make them look
like a Klingon?

>
> VS

Vipal why don't you just give up and send you license to
Riley Hollingsworth with "CANCEL" printed on it? Then
you won't be a part of our CULT. Just remember REAL
cults don't want it's members to leave their little group, we
on the other hand wouldn't mind at all if YOU LEFT!

I would hope that to be not true. I expect "some" Muslims (those
radical extremists that simply hate all and anything American)
to probably rejoice, but not "all". I pray I am right.

Nor does the FCC require anyone to operate at any particular
speed when using morse. It is perfectly legal for me to have
a morse QSO with someone at one wpm if we want.
Nor does the FCC care if I send erroneous morse characters by mistake.

>Any individual has the right to petition the FCC for changes in the rules.

I agree! And when an individual does so, it's obvious that it's one person
speaking their opinion.

But an organization is a different matter. That's why "lobbying organizations"
- which one of the ways NCI describes itself on its website - exist.

>A lot do ... many of them are stupid ideas and the FCC rejects them,
>either out of hand, or based on opposition in filed comments.

Why do you call them "stupid"?

>So "How many members do you have?" is not a determining factor
>in whether a petition/comments/or other filing "gets traction" ... at the
>end of the day, it's "Does this make sense? Is it within the Commission's
>authority and policy objectives? etc." Once again, making FCC rules
>is NOT a "popularity contest" ... it's a fact/logic/public interest-based
>process.

Then you should have absolutely no problem with letting the world know how many
members NCI has, right? After all, it's not a popularity contest, and "How
many members do you have?" is not a determining factor, right?

I understand that during the 98-143 comment period, there was a concerted
effort to have every NCI member submit individual comments. Nothing wrong with
that in any way, of course, but if the regulatory process is a
fact/logic/public interest-based process. then there's no need to have a lot of
comments all saying the same thing, right?.
>
>As a closing note on the subject of the precise size of NCI's membership.
>1) I have no intention of telling you
>2) It grows almost daily, certainly monthly
>3) The size is, as I have stated above, irrelevant, it's the quality of its
>policies and arguments before regulators that counts.

Sounds like you just don't want folks to know. That's fine, but the fact is that it hurts rather than helps credibility.

--

In any event, we're in a holding pattern until S25.5 changes. As I read the official pronouncements, FCC won't reduce code testing any more than it already has until S25.5 permits it. This leaves one of two possibilities:

1) If S25.5 somehow survives WRC 2003 intact (extremely unlikely, yes, but let's not count the nocodetest chickens just yet), we'll still be in the holding pattern for an indefinite future.

2) If S25.5 doesn't survive WRC 2003 intact (extremely likely that it will simply be removed), and the treaty is ratified, FCC will quickly receive at least one (probably several) proposals to dump Element 1. Which FCC would probably do even without a formal proposal.

So the question is: If/when 2) happens, what other changes should be made to the US license structure? Particularly the entry level license?

Yo! Hey! Steve? Where didja go?

We've got supposed attorneys on here. We've got supposed injuneers on here (pfffffffffffft! my buttttttttttt)

We've even got kit-builders on here (N2EY).

Now where are the pharmacy techs???

Can anyone tell me what kinds of meds might be accessible via the emergency room???

Hello all ....

I operate SSB for an hour or 2 at most per year and will not get into why I don't but I can honestly say that in 38 years of being on CW the worst I heard was Hey Buddy directed at me for an admitted fault. I will add however that I do not and will not subject myself to the lidfests that go by the name of pileups. CW to me is an escape from the day's frustrations where again admittedly ...I talk too much.

God Bless 73 Tom KI3R Port Vue Pa nr Pittsburgh

>technically backward in this game.

Kellie is technically ignorant there. "Commercials and military" have long had upper or lower sideband selectible operation except that their "sidebands" were 12 KHz wide with a pilot carrier in the middle (an extra tone used for locking early commercial-military SSB receivers).

Take a close look at the SGC 2020 transceiver. Stoner Goral Company in Washington sells as many or more of that little HF SSB voice transceiver for boats/ships as for radio amateurs. It is made in the USA.

The SINGLE CHANNEL SSB transceiver that began the "SSB revolution" in amateur radio owes much of its start to USAF development contracts for Stategic Air Command communications. If either USAF SAC or Collins Radio. are considered "technically backward," Kellie isn't catapulting from this universe's deck... :-)

>
>So do I. But the point I was making is that ALL hams benefit, even if ALL
>hams aren't ARRL members.

That alone is so debateable it could be a whole new newsgroup.

ARRL is a tripartite organization. It is a publishing house
making a profit from books and periodicals. It is a member-
ship organization of a minority group of licensees acting in

a quasi-regulatory activity as if they had such regulatory
powers. It is a special-interest group represented by two
firms in DC, one a lobbying group and the other a legal firm
long on retainer to represent ARRL.

There is NO guarantee that ARRL "represents" anyone since
they are NOT bound by government rules applying to elected
public governmental positions. Most "decisions" are reached
by a limited group, called the Board of Directors, the ones who
do nearly all the "deciding" on what is good for the member-
ship.

The only "guarantee" of "democratic process" in "representation"
comes from the Word of ARRL that it does what it says.

>>Note that NCI has gone beyond its normal topic on a couple of
>>occasions (like the ARRL's Petition for Reconsideration on extending
>>PRB-1) and filed comments wholly endorsing and supporting ARRL's
>>position ... because it was "the right thing to do" ... and having done
>>that, we got flamed big-time here for having done so ...
>
>Hold on a sec - I don't recall any "flaming" on that issue.

More selective amnesia. There was much flaming here.

>Despite the poor choice of name, "No-Code International" was founded as a
>one-issue organization whose one-and-only purpose was the total elimination
>of all mandatory code testing for any class of amateur radio license.

"Poor choice of name?!?" What in the world does Reverend
Jimmie Callsign think that "ARRL" stands for?!?

American Radio Relay League...originally a kind of free
telegram service! Read the history of ARRL with at least
one unclouded eye. That was way back in 1914 when
amateurs used spark transmitters and galena crystal
receivers and Western Union telegrams cost a lot of money.
That organization history reads like a pre-WW1 "Napster."

ARRL was NOT the first nor the "foremost" national
organization for radio amateurs. The Radio Club of America
was formed five years prior to ARRL. ARRL did not become
prominent in amateur activity until well after WW1.

>The criticism was justified because NCI was getting into areas that are
>otuside its stated purpose and objectives.

Absolutely NO negative criticsm may done about ARRL.
Everyone knows that catechism.

>But NCI's sole stated purpose is the elimination of code testing - nothing
>else. In fact, Bruce Perens has stated that his intent is/was for NCI to
>vanish when that goal is accomplished. Which will probably be very soon.

Reverend Jimmie KNOWS things. "...probably soon..."

<shrug>

>Whoa there! If you're gonna discuss policy, at least get the facts right!

Absolutely, all must sing from the same hymnal.

>The NPRM issued by FCC said 4 classes of license. It laid out specifics for
>the
>written tests for those licenses, but not for code tests for those licenses.
>The R&O was very different than the NPRM. If 3 classes of license was a good
>idea, why didn't the NPRM say so?

Reports and Orders ("R&Os") do NOT have to be "identical"
or even "similar" to Notices of Proposed Rulemaking (NPRMs).

R&Os are written AFTER and BECAUSE OF comments
received after an NPRM is released.

>Yup. Eliminated all those medical waiver headaches and simplified the admin
>work.

Indicate, by references to FCC statements, all the "headaches"
caused by amateur radio medical waivers.

If Miccolis has headaches frequently, he should seek the
services of a licensed Medical Doctor. That could be the
sign of a more serious condition...

>Is that wrong? Are citizens supposed to take whatever FCC puts out and say
>"thank you sir" while tugging their forelocks and bowing?

Members of ARRL must "tug their forelocks and bow" to all
decisions of ARRL BoD. ARRL "represents all radio
amateurs."

Since the FCC is the ONLY federal agency regulating US
amateur radio, one had damn well obey the FCC in order
to be legal in amateur radio transmission.

>Not me. But isn't it the right of all Americans to complain about their
>government and petition for changes? Or is that right reserved only for those
>who agree with NCI's opinions?

No...all US amateurs must look to ARRL to complain to
their government for them, to hand over all administrative
representation to the organization "for all amateurs."

Also, no one dare state any negative criticism of ARRL
lest they be tagged unholy or something worse...

<signature here along with strict obediance to BoD decisions>

>is best for amateur radio.

Has ARRL *ever* had as much as a quarter of all licensed
US radio amateurs?

ARRL is a MINORITY group who claim to "know what is best
for amateur radio."

>ARRL IS "the national society for amateur radio" - simply because there is no
>other. Doesn't mean they represent all US hams.

ARRL says it does. On the home page they, up top, say
that "amateur radio begins here!"

>But when ARRL does something
>that benefits US amateur radio, all US hams benefit.

Of course. Having to pay extra shipping charges on ARRL
publications ordered from Newington is a "help."

Europeans have had a LF band for their amateurs for years.
The USA doesn't, just 160 to 190 KHz license free if very
low power.

>I don't agree with some of FCC's decisions. Is that wrong? Must I agree with
>YOUR vision of the future? That's what "...bring amateur radio into the 21st
>century" is saying.

It's fairly obvious to any reader in here that Rev. Jimmie
Callsign tries to shove His opinions down everyone else's
mind every time somebody says the least negative thing
about ARRL.

>>if the ARRL's policies and recommendations had been more
>>in line with the realities of today and the Commission's legitimate
>>regulatory
>>objectives, they might have gotten more traction ... ours were ... we got
>>the traction ... live with it.
>
>Sounds like the rooster taking credit for the dawn. If someone says what FCC
>wants to hear, they're going to have a high success rate.

Sounds like several bushels of Sour Grapes...not to mention
selective amnesia about self-propaganda from ARRL for
years about "FCC acting on ARRL requests/petitioning."

ARRL just hasn't been getting What It Wants for a decade-plus.
That should demonstrate something to rational individuals.
Problem is, Believers aren't all that rational.

>Note that FCC also reduced written testing, despite many suggestions on how
>to improve it.

Truthspeak. FCC has fully privatized the Question and Answer
generation, yielding responsibility to the VEC Q&A Committee
(all but final approval by them). The FCC no longer requires a
specific number of topic questions on writtens.

>Fact is, FCC wants out of code testing for a number of reasons that have
>little to do with the good of amateur radio. Examples:

That statement is only valid if morsemanship is the epitome
of radio amateurism. It isn't, so the statement is invalid.
FCC does not mandate exclusive morse code modes over
and above all other modes; all allocated modes are optional
to use.

>- FCC doesn't want all the admin work of medical waivers.

Was that ever a problem? If so, to what extent? Please
show references or evidence to that effect.

>- FCC doesn't want more petitions for or against code testing

Was that ever a problem? Show your work. FCC is bound
by law to accept all comments, petitions, etc. from US
citizens.

Rev. Callsign never worked IN or for the FCC, cannot possibly
"know" their "motivations."

>- FCC thinks that if code testing is removed and written testing reduced,
>people who formerly went to cb or freebanding will become hams, thereby

>reducing enforcement headaches.

That's a Wild Supposition, unsupported by any evidence
in FCC statements.

Come back to reality.

>- FCC thinks eliminating code testing will somehow cause hams to become "more
>technical", even though the dropping of the code test from the Tech a dozen
>years ago shows that doesn't happen.

Another Wild Tale of Supposition, worse than the preceding.

The FCC is only a REGULATOR of US amateur radio (and all
other US civil radio), not a "sponsor" or "endorser" or
"promoter" of any radio service. FCC is not chartered to do
those things nor is it any academic institution giving tests on
"technical achievements" of individuals.

The FCC uses amateur licensing as another tool of its lawful
task of regulating US amateur radio.

>in line with the realities of today and the Commission's legitimate
>regulatory
>objectives, they might have gotten more traction ... ours were ... we got
>the traction ... live with it.

The last sentences are the most telling by observation.

ARRL failed to get what it wanted, despite a huge membership
by comparison to individual groups dedicated to a single cause.
ARRL failed despite a continuing retainer with a communications
oriented legal firm in DC.
ARRL has failed a number of different things for "the good of
amateur radio" (meaning its BoD's ideas of "what was good")
in the last decade and a half.

>your statements were incorrect. I've offered proof.

"...told told..."? :-)

I've remarked some of what transpired in here 1997 through 1998.
That isn't "incorrect" except in a universe centered on yourself.

>Why should I allow you to attribute statements to me which are not
>truthful?

You should not. Then again, what you've said is no more
"truth" than selective quoting, taking one message out of a
thread of many as stored in a privately-run "archival" site as
handled as if it were court documents.

There are several reality-based statements that I made some
long time ago that apparently outraged Heil. These were:

1. Guinea-Bisseau (a former colony) has a low rank among
3rd world middle African countries...its chief export in
world trade is reported to be cashew nuts. It seems to
remain in the same regard some years later.

2. The use of manual telegraphy on an otherwise RTTY circuit
for exchange of operating schedules and other comm data
is questionable. That is very uncommon procedure among

all other commercial or military or government HF radio
users, including localities close to the equator. That is
normally not done now nor was it done back before WW2.
If a TTY works at all on a radio circuit, then a TTY is used
for the "order-wire." If TTY will not work as an "order-wire"
then it makes no sense to use it for regular message traffic.

Add to this -

3. US State Department communications networks are much
smaller than any communications networks among the US
Army, US Navy, and US Air Force. USN and US Army
radio networks were running on HF prior to WW2 on a
24/7 basis (continuously, around the clock) using equipment
designed for the task. The US State Department radio
communications equipment, procedures, etc., have never
been considered "leading edge" nor always up to the state
of the radio art by anyone except the US State Department.

4. A small former colony with small population and small economy
and posing no real threat to anyone in middle Africa or the
rest of the world cannot logically be considered to be any
sort of "key post" ("key" as in important or meaningful or of
high rank). One can assume that US Embassy activities
would not be, nor have to be, in operation continuously around
the clock except for the USMC guard activities.

5. The US Department of State is engaged in US government
foreign relations in an overall diplomatic mission (as in work
assignment). It is not engaged in direct defense of the
USA nor is it tasked for direct offense from the USA...with
the possible exception of certain former employees who feel
superior to ordinary citizens IN the USA.

6. Activities of the US State Department do not solely involve
radio, certainly not amateur radio. The US military branches
all have MARS facilities which sometimes work with US
radio amateurs. The US State Department does not, nor
can it "rule" over communications activities of the US military
abroad (that is an NTIA and DoD liason activity enforced
within respective military commands).

7. All of the above can be researched by anyone else and
found to be correct...with the exception of certain newsgroup
regulars who demand others to follow their words explicitly
and without question...for they are superior.

>Incorrect, Foghorn Lenhorn.

Some creativity on Heil's part noted. AFTRA yields a grade
of D+ due to lack of respect for the late Kenny Delmar, the
voice of "Senator Claghorn" on the Fred Allen Show (radio).

>Your current predicament came about as a
>result of one too many of your deliberate falsehoods.

I have NO "predicament."

Heil has NOT discussed the validity of using manual CW on
a US government RTTY circuit, the original question raised
some years ago. Heil is thus ruled technically deficient.

>> Amateur radio policy matters are well down on the list.
>> What matters most is PCTA "personal honors" at stake,
>> that their Truthspeak is true when it is not.
>
>That isn't what happened at all. You are the individual responsible for
>bringing up any of this.

I was never involved in US State Department communications
and never stationed in any 3rd world middle African country at
any US embassy. I have been part of a much larger US Army
radio network working "24/7" (continuously, around the clock)
during a period of over 30 years. Heil insists that "no one"
operates 24/7 and forbids the expression "24/7" referring to
anyone being "on-call" at any time away from their scheduled
operating times.

Heil has continued to redefine colloquialisms and common
expressions to suit his purpose. That purpose is, seemingly,
to portray himself as a radio expert, an important guru within
US government...all because so few others have ever been
working in the same US government capacity.

He MUST reply to this message. His "honor" demands it. He
MUST be "right." QED.

>That's really what it comes down to, Dave. But Mr. Anderson becomes quite
>agitated when he is shown to be in error.

Reverend Jimmie Callsign seems to get prissy and pedantic
whenever his "honor" is perceived sullied...says anyone not
going along with his statements is "mistaken" or "in error."

>Note the above comparisons to an old movie character.

Note some others' use of old cartoon character names! :-)

>As for family, I don't think I've ever mentioned anything about that subject
>here. Nor do I intend to.

Out of fear? :-)

Reality can be fearful. Valid information may sully the shining
patina of fantasy and myth, the golden garment some long-
timers wear proudly. :-)

>We've been all through this before, Dave. The context is whatever Mr.
>Anderson says it is.

How so? I don't redefine common expressions. No human
individual can work continuously without rest or food, yet
tens of thousands of humans around the world are on call
outside of regular work hours. Heil disallows the expression
of "on call" in reference to the expression "24/7." Heil does
not want the "24/7" label to apply to units and organizations
(which they DO apply to), only to individuals. Illogical and
invalid demands.

>More than 2000 years after Julius Caesar crossed the Rubicon, too. 2500 or so
>years since the battle on the plain of Marathon. Humans still run marathons,
>by the way - guess we runners are "clinging to the past".

Ahem...the old Romans and old Greeks did NOT have radio.

How does elementary world history of ancient times apply to
amateur radio, let alone amateur radio policy?

>Mr. Anderson has said he "knows morse" in another post, but perhaps that was
>another error, since anyone who "knows morse" in the context of amateur radio
>should be able to pass the 5 wpm test.

Perhaps Reverend Jimmie Callsign confuses himself in an
effort to Correction Of The Heathen or to the Sacred NEED
To Take A Ticket Test?

Apparently this is another in a series of Redefinition Statements
wherein (the Heil case) "An Interest In Radio = Amateur Licensing."

According to Rev. J. Callsign, "Knowing Morse (code that is) =
Should Take An Amateur Test."

:-)

>Dave, Mr. Anderson obviously suffers from poor language comprehension. He
>does not understand your radio operations for the State Department. Such
>misunderstandings and misquotes are common for Mr. Anderson.

Ah, but Rev. Jimmie Callsign DOES! Amazing. Here's a holy
man who never served in any US military or US government
position in any sort of radio communications who KNOWS
all. The good reverend never worked any commercial HF
radio carrier's position yet he KNOWS all about procedures
and methods and equipment in the rest of the radio world.

>Mr. Anderson projects his own behavior and feelings onto others. Note how
>angry, upset and abusive he gets over my calm, reasoned, well-documented
>posts pointing out his errors.

Tsk, tsk, tsk. "Calm, reasoned, well-documented..." :-)

Has Callsign looked in a major newspaper's business section
about a week and a half or so as requested. Has he seen

that amazon.com posted a SECOND consecutive PROFIT
quarter? No? Try the Internet. Most major newspapers also
have websites and anyone can view recent stories they carried
in print.

What was interesting here was that I once had a thread going
on ARRL publications' ADDED shipping charges to on-line
or mailed-in orders. Amazon.com had this incentive of NO
shipping charges on minimum orders (about $25) and amazon
resells all ARRL books at the same retail price.

First of all, that was a Negative against ARRL. The Reverend
does NOT like ANY negative comment against ARRL. (they
are inviolate, all criticsms are to be battled against with fury,
scorn, derision, etc.). Next we have Jimmie trying to shoot
down a book reseller with charges of "unprofitable business!"

Misdirection. Knowing that Defense of ARRL won't work in
the long run, Rev. Callsign goes after a business and the
originator of the statements not heaping praise and kindness
on His membership organization. That takes the onus away
from ARRL...as (almost) designed. :-)

>Interest levels vary, Dave. Mr. Anderson's interest level has not reached the
>point of being licensed in the amateur radio service. Is that a bad thing?

Pssst, Reverend, Mr. Anderson got involved AND interested in
radio communications and all electronics beginning in 1952
while in the service of his country (the USA), actually working
HF communications beginning in 1953. Big-Time comm, lots
of messaging, stations working around the clock continuously.
No morse code modes were used in that communications.

As late as the year 2003, few pedantic prussian persons
REDEFINE words and phrases to insist that "Interest In
Radio" = "Must Get An Amateur License." QED.

Of course it is a "Bad Thing" to some. They NEED that
amateur radio license to wave around and show how superior
they are to others. No problem here, it is well understood.

>Perhaps we should have a nice ragchew on 80 or 40 CW some evening. It would
>be good to hear tales of Helsinki, Dar-es-Salaam, and other exotic locales
from
>someone who lived there for years, while serving our country's diplomatic
>mission.

Wow, yes. It should be on display Here! Especially the
"exotic" parts of the capitol of Finland! [tales of intrigue and
drama "on the scene?"] Can't wait to hear more about
exotic middle African countries.

Meanwhile, feel free to deride those of us who were in the US military doing communications from overseas locations, being soldiers or sailors who had the mission to defend our country (by force if need be) at the same time. No problem. I'm sure you think the military on duty before your birth are of no consequence.

All they reduced was the code. It's still the same material on the writtens.
The differing amount of questions on the tests has little effect on how hard
one needs to study to prepare for the tests.

I wonder if any freebanders decided to get a ham license (general or
extra, the ones with HF privs) and operate legally on ham bands and
quit illegal operations in other bands. Of course nobody is going to
say that he "upgraded" to ham from "freeband".

All the above can be explained by the fact that it reduces costs
for the FCC.

Ah. You have no idea how any of this works. No troublemaking code hater
ever
learned even enough of it
to get on his favorite 2meter repeater and utter a few obscenities in
Morse.
We see.

Just for your enlightenment, the *REAL* CW operators are found on the
south
end of each HF band. THAT is where there are no problems with
violations, as
evidenced clearly by the FCC Enforcement logs and by Riley's
statements..
That one of your kind would stoop to swearing in Morse on a VHF FM
repeater
is certainly believable.

Hey, even YOU could learn enough code to do that.

Yer not only untruthful you're also totally clueless...But that's been
clear for years and
everyone who knows anything knows it. Why d' ya think the FCC insisted
on THREE ve's at each
and every test session - to hold each other's hands?

Yer an Energizer Bunny full of nothing but hot air and gibberish. No
wonder you sat
on the sidelines all those years bitching and whining insted of getting
into the game. You
couldn't find the playing field!

>percentage of Hams are fat. Also, it is a greater percentage than the general
>population. I drew this conclusion from seeing Hams at a few clubs and at
>Hamfests. Also, a survey supports this conclusion.

WHAT "survey", Vipul? WHAT reputable polling agency conducted this
"survey" and under what accepted polling tchniques?

>There is a high percentage of overweight people in Ham radio. Therefore there
>must be some behavioral reason. Perhaps lack of physical activity due to
>amateur radio aspects such as contesting or Worked All States.

Vipul, is there a responsible adult in your house that knows you're
playing with the computer?

>It's not just me, there are many others that believe Hams are weird.

Who? The Reilians?

>No, I said that Hams are not: ex-cons, wife beaters, alcoholics, druggies,
>nut
>cases, slobs, fruits. But, many are societal (or social) misfits.

No, Vipul...YOU statd MOST hams were fat, and are (social) misfits. You
can't have it both ways.

>> You are really sick, Vipul. What's with you and obsessions of
>>"cults"..?!?!
>
>Pointing it out does not make me one. The Ham radio hobby is very much like a
>cult. The word "Ham", the use of strange Q codewords, hatred of CBers, Morse
>code sub cult.*

Yes, Vipul, you ARE "one of them". You continue to post to a newsgroup
for an avocation that you clearly disdain, yet as of 10 minutes ago, I see you
are still listed in the FCC database. Obvioulsy you LIKE being "weird" because
you continue to maintain the basic vestige of what YOU consider "weird", tha
Amateur Radio license.

Take it out of your pocket or off the wall, write "CANCEL" across it and
mail it to Gettysburg.

Failure to do so makes you "one of us", just as "weird", "fat", "old", "mis(fit)" and basically no different than those you ridicule.

>True, these are the typical Hams. Seems like a normal group. But, when they
>get
>together in cult-like activities, then it becomes weird.

As opposed to Vipul Shaw, who is weird all by himself.

So let's consider Vipul and HIS weirdness...

He enters a newsgroup for Amateur Radio and begins posting as if he knows what he's talking about...Except it only takes a post or two to tell he has little or no experience in Amatuer Radio.

He asserts otherwise, but his posts are rebuked by a dozen other posters.

He also refuses to identify himself, callsign, licensure and amount of experience, only to have it found out and posted to the NG by a person with little if any investigative skills.

Then you deny it for a week, but finally "admit" it is you.

You then assert in yet another post that you only express criticsm of Amateur Radio within Amateur Radio circles, yet only 3 days later you are found posting under your own screen name in the CB NG, not only being critical, but outright insulting.

You then have the temerity to resume psoting in THIS NG telling us how weird "WE" are...

Son, you have some serious problems.

Steve, K4YZ

The ARS should be, and is, free to use all "technically backward
practices" of modulation that it wishes with one exception - Type B.

Here are the number of unexpired FCC ARS licenses held by individuals on the dates listed:

As of May 14, 2000:

Novice - 49,329
Tech - 205,394
Tech Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750
Total - 674,792

As of January 31, 2003:

Novice - 35,621 (decrease of 13,708)
Tech - 249,365 (increase of 43,971)
Tech Plus - 72,359 (decrease of 56,501)
General - 140,008 (increase of 27,331)
Advanced - 84,188 (decrease of 15,594)
Extra - 103,394 (increase of 24,644)
Total - 684,935 (increase of 10,143)

While I won't dwell on the fact that a lot of various groups have their own way of doing things (gee, why can't tennis simply score 0, 1, 2, 3 like normal folks?), I can see his point about the HTs. Gee, imagine that, carrying around a radio. Of course, if you take that HT, bubble pack the thing, make it in bright vivid colors, allow the user to play pac-man on it and have it play "charge" in all twelve keys, then it becomes a "normal" thing. I can't believe the folks wearing ear protection with those radios (oh, cell phones; but they are nothing but a duplex HT connected to the telephone system - and my HT can connect to the telephone system too) stuck under one of the earpads so they can look busy and chat for hours on end. Yep, the hams sure are a strange group, huh?

As far as overweight, I don't know. Most of the hams I personally know are not overweight. I doubt I'd have a problem doing as many pushups as years I've been on earth; most likely in well under two minutes as well (I'll be 56 in a few months).

So, keep on jabbering away. Maybe you'll start believing what you are saying. I still get a big laugh over the HT statement when just about everyone is yakking on a cellphone (especially the idiots trying to drive while yakking on the phone - and running red lights to boot).

Go back to your padded cell and shut the door behind you; thanks.

Boy did I just get an eyeful! I got an email from a Ham in Pittsburgh named Brian. He sent me a link to his website and sent me some original documents that convinced me he knew what he was talking about regarding the subject of this thread. I should interject here and say the FCC is the least of Baxter's worries if the material I read is even halfway accurate. Brian also did some excellent reasearch, which, if I were an ALJ, would convince me to revoke Baxter's license. The Part 97 research is as good as I've ever seen in court.

I cut and pasted Brian's opinion below:

ï¿½97.101 General standards.

(a) In all respects not specifically covered by FCC Rules each amateur station must be operated in accordance with good engineering and good amateur practice.

Apparent Violation #1[Distorted, drifting transmitters, and frequently broken tape recorders are apparent violations]

(b) Each station licensee and each control operator must cooperate in selecting transmitting channels and in making the most effective use of the amateur service frequencies. No frequency will be assigned for the exclusive use of any station.

Apparent Violation #2[No frequency is assigned exclusive use of any station, bulletin stations notwithstanding. Broadcasting on top of other hams is an apparent violation]

(d) No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication or signal.

Apparent Violation #3[Again, broadcasting over top of hams already using the frequency is an apparent violation]

ï¿½97.103 Station licensee responsibilities.

(c) The station licensee must make the station and the station records available for inspection upon request by an FCC representative. When deemed necessary by an EIC to assure compliance with FCC Rules, the station licensee must maintain a record of station operations containing such items of information as the EIC may require in accord with ï¿½0.314(x) of the FCC Rules.

Apparent Violation #4[Missing at least 2 FCC visits due to lack of a control operator at the transmission point is an apparent violation]

ï¿½97.105 Control operator duties.

(a) The control operator must ensure the immediate proper operation of the station, regardless of the type of control.

Apparent Violation #5[Tapes that break, repeat, and automatically replay themselves without correction, indicate a lack of station control, and are an apparent violation]

ï¿½97.109 Station control.

(a) Each amateur station must have at least one control point.

(b) When a station is being locally controlled, the control operator must be at the control point. Any station may be locally controlled.

Apparent Violation #6 [The only control ever alleged by K1MAN is local control. To the extent that he is not in the station during the broadcast, he is out of control, which is an apparent violation]

ï¿½97.111 Authorized transmissions.

b) In addition to one-way transmissions specifically authorized elsewhere in this Part, an amateur station may transmit the following types of one-way communications:

(6) Transmissions necessary to disseminate information bulletins

Apparent Violation #7[ARnewsline and RAIN are already stretching the bulletin rule. A call-in and talk-show is beyond the pale and is an apparent violation]

ï¿½97.113 Prohibited transmissions.

(a) No amateur station shall transmit:

(3) Communications in which the station licensee or control operator has a pecuniary interest, including communications on behalf of an employer. Amateur operators may, however, notify other amateur operators of the availability for sale or trade of apparatus normally used in an amateur station, provided that such activity is not conducted on a regular basis

Apparent Violation #8[K1MAN has an obvious pecuniary interest in the success of his charities, the International Amateur Radio Network, and the Amateur Radio Peace Corp Foundation, as well as the American Amateur Radio Association, which he soliticits donations to on a daily basis. On his website, to which he also refers his listeners, are all kinds of items for sale and solicitations for donations.]

(5) Communications, on a regular basis, which could reasonably be furnished alternatively through other radio services.

Apparent Violation #9[Every bit of the K1MAN broadcast could be alternately furnished on Short-wave]

b. nor shall an amateur station engage in any activity related to program production or news gathering for broadcasting purposes, except that communications directly related to the immediate safety of human life

Apparent Violation #10[K1MAN has routinely engaged in newsgathering and production for the purpose of retransmitting same on his broadcast. The Sam Voron interview, the John Palmer interview and the Joe Fairclough interviews in January 2003 are just a few examples in a long list]

ï¿½97.117 International communications.

Transmissions to a different country, where permitted, shall be made in plain language and shall be limited to messages of a technical nature relating to tests, and, to remarks of a personal character for which, by reason of their unimportance, recourse to the public telecommunications service is not justified.

Apparent Violation #11[Publicly calling for the resignation of an FCC official and criticizing the Federal government are not technical or personal and unimportant transmissions. To the extent that K1MAN can be heard in other countries, this is an apparent violation]

ï¿½97.3 Definitions.

(10) Broadcasting. Transmissions intended for reception by the general public, either direct or relayed.

Apparent Violation #12[Remarks directed toward non-hams, for example, offering code practice tapes to short wave listeners, during the K1MAN broadcast is an apparent violation]

(23) Harmful interference. Interference which endangers the functioning of a radionavigation service or of other safety services or seriously degrades, obstructs or repeatedly interrupts a radiocommunication service operating in accordance with the Radio Regulations.

Apparent Violation #13[Another reference indicating an apparent violation is the harmful interference to stations operating in accordance with the radio regulations who are using the frequency prior to the broadcast]

(25) Information bulletin. A message directed only to amateur operators consisting solely of subject matter of direct interest to the amateur service.

Apparent Violation #14[K1MAN is apparently in violation to the extent that his transmissions are aimed toward non-hams]

(30) Local control. The use of a control operator who directly manipulates the operating adjustments in the station to achieve compliance with the FCC Rules.

Apparent Violation #15[To the extent that K1MAN is not in the shack or using telecommand to control the station, this is an apparent violation. A radio shack timer does NOT take the place of station control]

Also Paul, many of these issues were supposed to be immediately corrected LAST YEAR on receipt of Riley Hollingsworth's letter of January 2002. Also consider the alleged apparent lack of cooperation with the Federal licensing authority; alleged threats to other hams who refuse to relinquish the frequency; and the alleged practice of sending bogus felony affidavit complaints through the US Mail, and you have a nice recipe for an immediate suspension, followed by a license revocation hearing in front of an ALJ.

End of email summary

Well, there you have it. If the FCC wants Baxter off the air, I'd say all they need to do is copy this page and send the letter.

-PJ

Bert
I listened to some of the Ten-Ten contest today. I don't have
a number so I didn't try to join in. How did you do in it?
BTW I heard about the accident during the Mid-CARS net
on 7258 kHz, I wasn't watching any TV today either.

<<<<<<<<SNIP>>>>>>>>>>

Wow! so this is how a lawyer thinks!!

What if K1MAN's advocate would establish that W1AW, has over time, done essentially all of the same things? (The only stipulated difference is bulletin "content".)

What if K1MAN's advocate could produce sworn depositions that W1AW used to swing its BC frequencies a few hertz to avoid starting up on on-going QSO's? (ed. This occured up into the '70's but was dropped along about the time that W1AW simultaneous multi-frequency broadcast was upgraded to commercial transmitters on fixed frequencies with robot control. -- Note that this suggests that there may not be control operators in attendance, according to Brian's rules).

Perhaps some more research is required before going before the ALJ?

Again, IMHO, the only rational way out of this is to require all bulletin stuff be restricted to the Morse/Data segments. W1AW saved, K1MAN gone.

73,
Clay N4AOX

Amateur Radio Newsline™ Report 1329 - January 31, 2003

==========

A NOTE TO THOSE WHO ONLY "READ" AMATEUR RADIO NEWSLINE(tm)

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would like to invite you to listen to the audio version. This Amateur Radio Newsline (tm) script is actually written for the "spoken word." It is recorded each by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP MP3 or dial-in telephone. Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. On site free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

de
The Newsline Production Team

==========

Amateur Radio Newsline report number 1329 with a release date of Friday, January 31, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. Ham radio assiastance continues at the Australian wildfires and the ARRL asks the FCC to go slow on spectrum reorganization. Find out the details on Amateur Radio Newsline report number 1329 coming your way right now.

(Billboard Cart Here)

**

RESCUE RADIO: AUSTRALIAN FIRES FOLLOW-UP

Amateur Radio is still supporting firefighting efforts in Australia. Q-News Graham Kemp, VK4BB, is in Brisbane with the latest.

--

--
vk1zpl audio
--

That's the voice of Phil Longdon VK1ZPL WICEN - ACT Coordinator speaking from Canberra.

As these Wildfires, or as we "downunder" call them "Bushfires" raced through South Eastern Australia they came dreadfully close to the Deep Space Network antennas at the NASA's site at Tidbinbilla. Here four giant antennas including Deep Space Station 43 - a 230-foot steerable antenna - the largest in the Southern Hemisphere are located.

The world famous Mount Stromlo Observatory west of Canberra was totally incinerated by the fires - a nearly $12 million loss.

Luckily for the Amateur Population, their main repeater was spared.

--

"The VK1 Black Hill repeater: Well if the hill wasn't black before it is now. It will be two to three weeks before they can gain access to the site, all the coaxial cables on the mast have been melted or damaged in some way.

A contractor for the tracking station will be removing and replacing them. Unfortunately these VK1 cables are not part of the contractors work, VK1 hams intend to try and get a price from the contractor to install their cables as they do the work for the tracking station. The equipment in the hut appears to be undamaged however will need to be checked out".

--

And the current scene in VK1 Phil?

--
Audio Here
--

Further South from Phil in VK3, The number of radio amateurs involved in providing communications assistance during the three week long fire disaster in north-east Victoria is growing DAILY, with two separate and distinct activities taking place.

WICEN Victoria has radio operators at three Incident Control Centres and two airbases in the north-east, while Red Cross is using its RECOM data communications system.

WICEN Victoria State Coordinator, John Kerr VK3BAF expects the provision of radio operators to the Department of Sustainability and Environment in the north-east could continue for at least another two weeks.

Additionally, John Kerr VK3BAF said, "WICEN has now been requested by the Victoria Police to be on a much higher level of standby to provide point to point communications should other radio or telephone networks fail".

--

"WICEN Victoria has now set up a statewide HF-radio network using the 40 and 80 meter bands. 3.6 and 7.075 MHz +/- QRM with 'W' abbreviated callsigns. Operators at Corryong will use callsigns 'WIC', Mt Beauty

'WIB,' etc. and net control AWI to the designated listening post on each band.

Schedule times are 0700 and 2000 hrs for 80 meters, 0900 and 1800 hrs for 40 meters with a continuous listening watch at all other times, especially on the hour up to three minutes past".

--

In other activity, the Australian Red Cross National Registration and Inquiry System is using three teams of radio amateurs at three entres - Eskdale, Bright and Omeo registering thousands of people who have been displaced.

A Red Cross WICEN communications system known as RECOM relies on radio amateurs in the field to transmit to a State Inquiry Centre the registration details of emergency evacuees.

This information is transmitted by radio amateurs at the Red Cross registration centres using laptop computers linked to amateur radio transceivers using PACTOR II.

WICEN Victoria's Division 4 Region 4 Coordinator, Peter Weeks VK3YZP reported late 29 January that currently there are 12 radio amateurs in the field - ten at Incident Control Centres, and two at airbases for fire bombing radio traffic. WICEN has been sourcing radio amateurs for the airbases who have aircraft experience.

Peter VK3YZP stresses that no radio amateur should enter the Alpine region without being assigned by WICEN Victoria, authorised by the other authorities, have been properly equipped with clothing, and provided an entry escort.

Reporting from Brisbane Australia, Im Graham Kemp, VK4BB, of Q-News for the Amateur Radio Newsline.

--

Meantime, Phil Longdon, VK1ZPL reports that Australia's Wireless Institute Civic Emergency Network or is providing operators at the Yarralumla Shire Fire Control Center. Longworth says that WICEN is supplying a total of ten operators with others on standby if needed. (VK1 WICEN, WIA Victoria and QNEWS)

**

REGULATORY: ARRL ASKS FCC TO GO SLOW

The ARRL has registered mixed feelings about the FCC's Spectrum Policy Task Force Report issued last November. In comments filed this week, the League called the report a positive first step in developing a comprehensive spectrum management approach but stopped short of endorsing it as presented.

In a bulletin to its members the ARRL says that the report fails to address the needs and goals of the Amateur Service. It also says that the report's orientation toward commercial services makes it not wholly applicable to the Amateur Radio which cannot pay for spectrum access.

And says the ARRL there's not been enough time to study the report's recommendations thoroughly, much less deploy them immediately. The League urged the FCC to not abandon longstanding allocation policies that are based on engineering.

But the ARRL reaction is not entirely negative. It says that it was encouraged that the FCC had worked to involve all portions of the telecommunications industry in developing a spectrum policy. And the ARRL has asked the FCC to consider greater use of "negotiated rulemaking" to expedite allocation decisions. (ARRL)

**

RADIO LAW: GOVERNMENT TOLD IT CANNOT RECLAIM FREQUENCIES

The United States Supreme Court has ordered the Federal government to return billions of dollars worth of unused wireless licenses to NextWave Telecom Inc.. This, as the court tells the government that it cannot take back what has been bought, even if it was not paid for.

Nextwave had defaulted on payment for the licenees it purchased at auction and the FCC had moved to reclain the bandspace. Nextwave went to litigation to stop the government seizure.

It all ended on Monday January 27th. At that time Justice Anthony Scalia, writing for the court, said the Commission could not justify intervening in the bankruptcy proceeding to take the licenses by claiming a regulatory motive.

The spectrum has been hanging limbo during the protracted court battle. (Published reports)

**

Break 1

From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world Xerox Amateur Radio Club repeater -- WD6CZH -- serving El Segundo California.

(5 sec pause here)

**

ENFORCEMENT: COORDINATED REPEATER VS. COORDINATED REPEATER

Two coordinated repeaters in the North-East have squared off over the use of a repeater pair. And if the FCC does decide to try to solve this one, it may need the wisdom of a King Solomon. Bill Pasternak, WA6ITF, has more:

--

Connecticuts Northville Amateur Radio Association's NA1RA machine is coordinated by the Connecticut Spectrum Management Association. This is a relatively new repeater coordinator that was formed a few years after the failure of the Tri-State Amateur Repeater Council. Tri-State was the group used to serve parts of New York, New Jersey and Connecticut.

And now Northville has complained to the FCC about interference to its NA1RA operation coming from the W2KGY repeater. This is a system operated by the West Point Military Academy Amateur Radio Club at West Point New York. But unlike most cases where one repeater is coordinated and the other is not, W2KGY holds coordination from UNYREPCO -- The Upper New York Repeater Council.

When one repeater is coordinated and the other is not, the answer is simple. The uncoordinated repeater bears the majority of responsibility to clear up interference to the coordinated machine. But in this case, both machines appear to hold legitimate coordination but from different adjoining coordinators. In other words, at least at this writing, both repeaters appear to be on the same channel pair becasuse a coordinator says thats where each respective systems should be.

So far, the only action by the FCC has been to send out an information gathering letter to UNYREPCO. UNYREPCO has responded and a copy of that response has been forwarded to the Northville group for its reply along with a recommendation that
a response from the Connecticut Spectrum Management Association be included as well. Only after digesting that response is the FCC likely to render a decision as to whether or not it will get involved. Well let you know what the agency decides.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

In the past, on verification that all systems in a dispute held bona fide assignments from a recognized frequency coordinator the FCC has opted to stand aside and permit the coordinators solve any disagreements that might arise. (FCC)

**

ENFORCEMENT: HAM WHO OPERATED UNLICENSED STATION TURNS IN LICENSE

A Berkely Michigan ham has submitted his license to the FCC for cancellation after being accused of operating an unlicensed transmitter in the FM broadcast band. According to the W5YI Report, Thomas Brothers, may not reapply for another Amateur Radio license for the next five years. He was also fined $10,000 after direction finding and an inspection of his premisis found the transmitter on 88.3 Mhz in the F-M band. (W5YI)

**

ENFORCEMENT: OPERATION BEFORE LICENSE ARIVES BRINGS SET ASIDE

The FCC has set aside of General Class license of John Gregory, W3ATE, of Lake Placid, Florida. This, for operation outside of his Technician class license privileges prior to recieving his General class license grant.

According to the regulatory agency at various times in 2002 Gregory apparently checked into a net on 14.300 MHz while still licensed as a Technician. He was issued Warning Notices regarding this matter on May 6 and June 6, 2002 but letters were returned to the FCC marked unclaimed.

Now the FCC has issued another notice to Gregory that gave him 20 days to explain his actions. If he fails to respond the FCC says that his General class application will be dismissed. (FCC)

**

ENFORCEMENT: UNLICENSED OUT OF BAND WARNING

Ten radio operators, eight of whom are hams have been sent warning notices by the FCC. This, regarding their alleged operation on 26.555 and 25.540 MHz.

In each case the warning letter recipient was told that operation of radio transmitting equipment on these frequencies without a license is a violation of Section 301 of the Communications Act . As such he could be subject to a fine or imprisonment if he continues on the air. Fines normally range from $7,500 to $10,000. (FCC)

**

NAMES IN THE NEWS: AA6JR NAMED TO HEAD ARRL PR COMMITTEE

On a much more positive note, word that Jeff Reinhardt, AA6JR, of Agoura Hills, California, has appointed by ARRL President Jim Haynie, W5JBP, as 2003 chairman of the League's Public Relations Committee. Reinhardt, who was recently elercted Mayor of Agoura Hills is also Public Information Coordinator for the ARRL Santa Barbara Section and Public Information Officer for his local club. (ARRL)

**

PROMOTING THE HOBBY: "AMATEUR RADIO TODAY" - THE VIDEO - FOLLOW-UP

This word to those who are wanting to obtain a copy of the new ARRL ham video "Amateur Radio Today." Please remember that the American Radio Relay League holds the legal and intellectual copyright to this program and that it is the one and only official, legitimate source for the new show. No other individual or group has been authorized to distribute it -- be it free or for a charge.

The ARRL plans to make Ham Radio Today available on both Video C-D and VHS tape. To get on the list for a copy please take your web browser to www.arrl.org/catalog and follow the instructions to order item number

8861. (ARRL)

**

HAM RADIO TRAINING: OMARC IN NEW JERSEY

OMARC - New Jersey's Oceam Monmouth Amateur Radio Club is sponsoring ham radio training classes again this winter. The sessions begin Tuesday, March 18th 2003 and run through the end of May. Classes will be held at the InfoAge Center OMARC Diana site, building 9116 on Marconi Road, in Wall Township. All classes will be begin promptly at 6:30p.m., each Tuesday night. For information on the clsees, ham radio testing and directions visit www.qsl.net/n2mo (OMARC)

**

CONVENTIONS AND HAMFESTS: NAB HAM RADIO RECEPTION IN LAS VEGAS

The annual National Association of Broadcasters Ham Radio Reception will take place during the NAB Convention on Wednesday April 9. The reception venue is the Hilton Hotel adjacent to the Las Vegas Convention Center.

Again this year the reception is co-hosted by CQ Magazine and Kenwood Communications and runs from 6 to 8 PM. This gives anyone planning to attend ample time to see one another yet ending early enough so that people can enjoy a night on the town or grab a flight nome.

More information on the Ham Radio Reception will be posted at www.cq-amateur-radio.com. Information about the convention and on-line registration is at www.nab.org/conventions (CQ)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**

THE WEB: NEW BUG SLOWS DOWN THE WWW

If you had problems surfing the World-Wide-Web last weekend you were not alone. A fast-spreading worm-like infection called Slamm SQL is being blamed for dramatically slowing down Internet traffic, interfering with Web browsing and delaying e-mail delivery. Bruce Tennant, K6PZW takes a look at what happened:

--
Agencies assigned to monitor the Internet say that the latest bug hit on

Saturday, January 25th. That's when at least 40,000 infected computers were found to be transmitting a flood of data that was disrupting hundreds of thousands of other servers worldwide.

The virus-like attack, which began about 12:30 a.m. EST, sought out vulnerable computers on the Internet to infect using a known flaw in popular database software from Microsoft Corp. According to the Computer Associates Virus Information Center, the SQL Slamme worm exploits a buffer overrun security vulnerability in Microsoft SQL Server 2000 and the Microsoft Desktop Engine 2000. The worm scans randomly generated I P addresses for vulnerable systems and sends out numerous packets, which may effectively cause a denial of service attack on the infected network. That translates into a lot of useless data clogging the Internet and causing it to bog down.

The only good thing about this worm -- if there can be anything good -- is that it does not go after home computers unless they happen to be running Microsoft SQL Server as an operating system. Also, this worm does not infect files and does not send any e-mail out. It exists only in the memory of the successfully exploited system. The downside is that there is no file based anti-virus signature available to detect this worm.

Monitors reported significant slowdowns, although recovery efforts appeared to be succeeding. A spokesman for Microsoft Corp. confirmed that Internet congestion was interfering with administrators trying to download the crucial software patch that Microsoft made available to protect vulnerable computers. The spokesman said that the congestion was also preventing consumers from contacting Microsoft over the Internet to unlock the anti-piracy features of its latest products.

According to a statement from Bill Murray of the Federal Bureau of Investigations National Infrastructure Protection Center, the overall Internet began to normalize by early Monday the 27th. And while everyone from on-line publishers in the United States to a telephone company in Finland seemed to be hit by the latest worm the world's largest Internet provider, America Online, reported no problems with any aspect of its service.

For the Amateur Radio Newsline, I'm Bruce Ternnant, K6PZW, in Los Angeles.

--

A check of our own statistics shows that Amateur Radio Newsline was not badly affected by the worm. Comparing downloads to the previous weekend we saw no significant change. (ARNewsline™ from published reports)

**

EMERGING TECHNOLOGY: PORTABLE PEOPLE METERS ARE WATCHING YOU

Media ratings company Arbitron has released some initial ratings results for its new television, cable and radio audience measurement system that it calls the Portable People Meter or P-P-M. The Portable People Meter has been undergoing U.S. market trials within the Philadelphia market since December of 2000. The PPM is pager-sized and is carried by consumers. It automatically detects inaudible codes that TV and radio broadcasters as well as cable networks embed in the audio portion of their programming using encoders provided by Arbitron. (TV Technology)

**

HAM RADIO IN SPACE: AMSAT PRESENTS THE FUTURE

Slow Scan TV and a possible plasma cloud experiment were among possible future projects discussed at a recent meeting of the Amateur Radio on the International Space Station or ARISS International Team. According to the ARRL Letter, the group included representatives from ARISS partner countries, their national ham radio societies and several national AMSAT groups.

Among other experiments discussed was a slow-scan television system camera that could be launched later this year. It would allow school groups to see as well as hear the astronauts during ARISS contacts.

Also discussed were a number of other future possibilities. These ranged from crossband operation from VHF to 10 meters using PSK-31 and a full-duplex voice repeater to comparing the performance of various solar arrays and even conducting a plasma cloud experiment. No details were available on what that might entail but plans are well under way to activate a 70-centimeter station from the I-S-S. (ARRL, ARISS, CQ)

**

RADIO IN SPACE: EDUCATOR ASTRONAUT RECRUITMENT PROGRAM

The National Aeronautics and Space Administration says that recruitment is currently underway for the Educator Astronaut Program. Applicants must be teachers who are U.S. citizens, certified to instruct Kindergarden through 12th grade with a minimum three years in-classroom teaching experience within the past four years. They must also hold at least a bachelor's degree in physical science, biological science, engineering or mathematics, or an education degree with a concentration in physical science, biological science, engineering or mathematics. An Amateur Radio license is not required. Applications are being accepted through April 30th. More information and the application package is available at http://edspace.nasa.gov. (NASA)

**

INTERNATIONAL - ISRAEL: TREES REMEMBER 911

Hagal International reports that the Israel Amateur Radio Club will plant one hundred and nineteen trees in that nations Silent Keys' Forest. These trees are in memory of the ham radio operators who lost their lives in the September 11th 2001 terrorist atacks in New York

City, Washington D-C and Pennsylvania.

Hagal International is the English language on-line edition of the Israel Amateur Radio Club's monthly magazine. It can be found in cyberspace at www.iarc.org. The planting of trees in rememberence is a tradition among people of the Jewish faith. (Hagal International)

**

INTERNATIONAL - UK: CLUB GETS LOTTERY FUNDING

Now how's this for getting money for club projects. The Telford and District Amateur Radio Society in Great Britain has received confirmation of receiving U-K National Lottery funding to the tune of 2,908 Pounds. This, for its Foundation and Intermediate class Amateur Radio licence training programes.

The monies will cover the purchase of training materials, room rental expensse, equipment, tools and everything else needed to do the job properly. Currently, 16 beginners are undergoing training at the home of G3JKX on weekends. The club is also a certified examination center and offers all levels of Morse and written testing. (RSGB)

**

DX

In D-X, word that Marti Laine, OH2BH, and several of his friends will be active from Johnston Island through February 5th. Laine made the destination of his latest D-X adventure public on a stop over for lunch with some friends in Los Angeles on Friday January 24th. The multi-member team will operate the High Frequency bands plus 6 meters on SSB, CW and RTTY. Q-S-L direct to OH2BH. (Various)

And the second DX'pedition to Ducie Island is scheduled to begin on March 8th and last about a week. According to the C-Q website, the new operation will include nine operators from five countries, with stations on all bands from 160 through6 meters plus the AO-40 satellite, on CW, SSB and RTTY. The callsign will be VP6DI2. Yes, that's a number two at the end, not a zee or zed. Very apropos don't you think. (CQ)

Lastly, word that IV3NCC is active portable A 4 from Oman for a the next several months. Look for him on the usual frequencies on the High Frequency bands and QSL as directed on the air. (GB2RS)

**

THAT FINAL ITEM: BE PREPARED

And finally this week, as the world grows more tense with each passing day, it is important for ham radio communicators to be prepared for any eventuality. Lloyd Colston, KC5FM, is with the Mayes County Emergency Management in Pryor Oklahoma. He says that the first step is to form a Community Emergency Response Team:

--
Audio only report. Hear it at http://www.arnewsline.org
--

Lloyd will be back next week with some ideas on how you can personally be ready to cope with any emergency or disaster in your area. (KC5FM)

A slight error, Richard. Foghorn Leghorn was intentionally funny.
Foghorn Lenhorn isn't.

The easiest thing for the FCC to hang its hat on is the lack of control operator. Baxter admits using a "Radio Shack timer" W1AW has 1 or 2 fully licensed operators at the transmitter controls during all of its operations. That in itself should be enough to rid us of Mr. Baxter with no collateral damage to W1AW. The time has come to drain this festering boil.

>
>All they reduced was the code. It's still the same material on the writtens.
>The differing amount of questions on the tests has little effect on how hard
>one needs to study to prepare for the tests.

The old written system required 5 tests, the new system only 3. A new Tech used
to have to pass two tests totalling 65 questions, now it's only a single 35
question test. Upgrading from General to Extra used to require two tests
totalling 90 questions, now it's a single 50 question test.

Yes, the material tested is roughly the same (some obsolete rules questions
were deleted). But with fewer tests and questions, the tendency is to focus
more on rules & regs and less on technical stuff.
>
>I wonder if any freebanders decided to get a ham license (general or
>extra, the ones with HF privs) and operate legally on ham bands and

Perhaps a few. More likely, someone contemplating freeband might go legit
instead.

>Of course nobody is going to
>say that he "upgraded" to ham from "freeband".
>
BINGO!!

>All the above can be explained by the fact that it reduces costs
>for the FCC.
>
Agreed, but I don;t think that's the only reason.

In any event, note this: What reduces costs for the FCC isn't necessarily what's goodt for the ARS. FCC cut back on enforcement for years to reduce costs - was that good for the ARS?

> thread of many as stored in a privately-run "archival" site as
> handled as if it were court documents.

I've asked where the selective quoting came from. I provided quoted messages showing my original comments and stating that I did not originate the system but worked with what was in place. The privately run archive sight has all posted messages from the time in question to present. You are free to look for anything I might have omitted and to repost it here.

> world trade is reported to be cashew nuts. It seems to
> remain in the same regard some years later.

Most African countries are former colonies. Guinea-Bissau is an armpit. You missed fish, shrimp and lobster as major exports--lots and lots of fish, shrimp and lobster. As fascinating as all of this is, it does not address statements made by me regarding the use of CW by the USG.

> 2. The use of manual telegraphy on an otherwise RTTY circuit

> then it makes no sense to use it for regular message traffic.

So far, the only questioning I've ever received on the issue is from you. Others seem to understand my frequent explanations. I've never claimed that the use of CW for this purpose was common or worldwide. You'd, of course, not have any way of knowing what is or was done by military or government HF radio users in Africa or worldwide in the present era--your being a retired fellow in California whose big claim to HF operation was half a century back.

> Add to this -

I've never made any statement regarding the size of State Department communications networks nor have I ever stated the State Department comms of the time were "leading edge", though they are now certainly

"state of the art".
So, what's your point?

> 4. A small former colony with small population and small economy

There is no Department of State listing of "key posts". There is the
"Key Officers" listing, as you've discovered. You can assume whatever
you'd like about the hours of operation. Those will remain only
assumptions.

> 5. The US Department of State is engaged in US government

You are not in a position to be an expert on what the U.S. Department of
State does. You could learn a great deal more from public documents.
There are a great many things that you'll never know. My superiority in
this case will consist merely of "I know more about it than you know".

> 6. Activities of the US State Department do not solely involve

Actually, Len, the Department of State does "rule" over activity within
a country where the United States has an embassy. The Ambassador, as the
President's representative in the host country, is in charge.
State RULEZ!

> 7. All of the above can be researched by anyone else and

Wrong again. Heil has discussed it. You didn't like it. That doesn't
begin to address you often repeated false statements about what I've
written.

> >> Amateur radio policy matters are well down on the list.
> >> What matters most is PCTA "personal honors" at stake,

>
> I was never involved in US State Department communications
> and never stationed in any 3rd world middle African country at
> any US embassy.

Well, there you have it.

You did, however, repeatedly make a number of false statements. One of
them was that I claimed originality for a CW order wire. Your current
rant has conveniently left that unaddressed.

> I have been part of a much larger US Army
> radio network working "24/7" (continuously, around the clock)
> during a period of over 30 years. Heil insists that "no one"
> operates 24/7 and forbids the expression "24/7" referring to
> anyone being "on-call" at any time away from their scheduled
> operating times.

Heils insists simply because no one anywhere on the planet works 24/7.
Companies can be in operation 24/7. Military organizations can operate
24/7.
Military components can work 24/7. You can't work 24/7 despite your
earlier statement that you did so. Being on call is not working 24/7.
I spent my entire State Department career being on call for at least one
week out of three. I've spent large parts of those years being on call
for months on end.
At no time did I ever work 24/7.

> Heil has continued to redefine colloquialisms and common
> expressions to suit his purpose. That purpose is, seemingly,
> to portray himself as a radio expert, an important guru within

> US government

It isn't to suit my purpose, Len. It suits reality. If I wanted to portray myself as an important guru like yourself, I'd have claimed that I worked 24/7 for all of those years.

> ...all because so few others have ever been
> working in the same US government capacity.

So few others? That's absurd. I can see that more research on your part is called for.

> He MUST reply to this message. His "honor" demands it. He
> MUST be "right." QED.

He did reply to your message. Accuracy demands it.

(Len MUST reply to this message. His compulsive-obsessive side demands it.
He MUST have the last word.)

> (which they DO apply to), only to individuals. Illogical and
> invalid demands.

False statement. Heil has no objections to units and organizations
working 24/7. I object when you tell us that YOU worked 24/7. You did
not.

By the way, you've repeatedly used the phrase "out of context" but
you've never advised us of what you considered to be the context.
You've never shown that your remark was taken out of context. All we
get is a rant about "Heil".

> >More than 2000 years after Julius Caesar crossed the Rubicon, too. 2500 or so

> To Take A Ticket Test?

Well, you did claim to know morse. Five words per minute is about as
basic as it gets. Even children can decode morse at 5 wpm.

> Apparently this is another in a series of Redefinition Statements
> wherein (the Heil case) "An Interest In Radio = Amateur Licensing."

No wiggling, Len. You claimed an interest in AMATEUR radio for some
decades.

That decades long "interest" hasn't resulted in your becoming licensed
despite your having told us that you were going for Extra right out of
the box.

> According to Rev. J. Callsign, "Knowing Morse (code that is) =
> Should Take An Amateur Test."
>
> :-)

Decades of interest in amateur radio + knowledge of morse code + going
for an Extra right out of the box = zilch.

> >Dave, Mr. Anderson obviously suffers from poor language comprehension. He
> >does not understand your radio operations for the State Department. Such

You must be joking. To jam or send obscenities using CW you don't have to be able to read it atall. A computer or a piece of paper listing the code would work for that. All you can assume is that the person doing it doesn't want their voice recognised.

> We see.

>

I would never do that, but why do you assume I can't read code? I passed the 20 wpm test, but I still hate code. All I said was I couldn't read by ear unless it was slow (maybe 10 wpm, and that's pushing it), and that I have to write it down at higher speeds (20 wpm, and I would be missing a lot). Doubtless if I actually liked code I would be using it and could do better than that, but so what? Equally, if the test speed had been dropped to 5 wpm by then, I wouldn't be able to copy even that well. Again, so what?

I don't know about that, but I'm prepared to beleive that the monitors
can't read CW, hence no complaints about CW ops.

Dick, if you don't want things repeated on RRAP, then you shouldn't
say them. And once said, you shouldn't keep defending it. It's all
on you.

You now have the opportunity to reverse your years gone by rantings,
done simply to spite No-Code Technicians, in your usual mean little
Dick way.

You can start with an apology to No-Code Technicians everywhere.

So the requirement to learn and then be examined on Morse/Farnsworth
code is superfluous without a requirement to become a *REAL* CW

operator?

Dick, you could petition your government to allow only one mode on amateur radio, and save the FCC all kinds of enforcement money.

> That one of your kind would stoop to swearing in Morse on a VHF FM
> repeater
> is certainly believable.
>
> Hey, even YOU could learn enough code to do that.

But if everyone that swears in Morse, swore using your cw sending techniques, no one would know they was swearing.

Dick, I've said this for years: What I fear most about reducing the Morse code requirements in restructuring is a lack of enforcement. And what I fear most about maintaining the Status Quo in restructuring is a lack of enforcement.

A lack of enforcement was a 25 year problem that isn't going to go away by just throwing Riley at it.

> 73,
> Clay N4AOX

Clay, let's examine your second statement first. I agree 100%. One of my first arguments in this thread was that many of the definitions in Part 97 are AWFUL! Those definitions should be changed, first and foremost. If hams change the language, through a Notice of Proposed Rule Making, then hams can do whatever the ham community wants to do, e.g., re-define bulletins, eliminate bulletins... whatever.

Now, again using one of the documents Brian sent me, let's look at how W1AW reportedly differs from its competition.

The list below refers to alleged character and lack of cooperation issues which can be used by FCC to revoke a ham license.

Does W1AW send felony affidavit complaints to people who complain? No.

Does W1AW play recorded diatribes against the Federal Government? No.

Does W1AW call Riley Hollingsworth a cheap and sleazy politician? No.

Does W1AW sue Hams who complain about its operation? No.

Does W1AW defame anyone, on any basis, routine or otherwise? No.

Does W1AW call its competitor a shallow sham of a hobby politics organization? No

Does W1AW call ANYONE names of any kind? No.

Does Walter Cronkite want to sue W1AW for copyright infringement? No.

Does W1AW have ANYONE alleging copyright infringement against it? No.

Does W1AW harass anyone using its email system or website? No.

The next list refers to Broadcasting, which is a HUGE no-no on Amateur Radio. The TV, AM, FM, and ShortWave bands are for broadcasting, not Ham Radio.

Does W1AW conduct a call-in and talk-show? No.

Does W1AW engage in a "newsgathering" type of "program production?" No.

Does W1AW record phone calls from the general public for playback? No.

Does W1AW direct its transmissions to non-hams at any time? No.

Does W1AW replay pre-recorded interviews? No.

The next list is about proper engineering practices.

Has W1AW ever been AWOL for inspection? No.

Does W1AW use distorted transmitters? No.

Does W1AW use drifting transmitters? No.

Does W1AW use a recording device that malfunctions on a routine basis? No.

Does W1AW use Radio Shack timers that routinely fail to operate properly? No.

The next list refers to other rules violations under Part 97.

Does W1AW record and play back phone calls without permission? No.

Does W1AW routinely solicit donations to QST or any other ARRL service? No.

Does W1AW refer listeners to ARRL's website to sell it's services? No.

Does W1AW sue the FCC, lose, and still refuse to conform to the rules? No.

There are 7 more pages but, I'll spare the members of this list. After a very exhaustive review, what K1MAN is doing now, is alleged by the FCC to be in violation in several major ways. Hollingsworth wrote K1MAN over one year ago asking him to change the way the K1MAN operates.

It is interesting to note that extra penalties routinely apply to the scofflaw. A scofflaw is someone who behaves as though rules do not apply to him. Apparently, operating procedures at K1MAN are much the same as they were over one year ago when K1MAN received the Hollingsworth letter.

I'll save the conclusions for the ALJ.

From: "KB9TMP"
>I believe YOU are weird, a amateur op that HATES ham history,
>ham jargon, and it seems hams in general!

I don't hate Hams. Certain aspects aren't being realized and I want to participate in those aspects. Much of this is due to what most Hams aren't interested in those aspects.

>Check out the next Star Trek convention if you
>don't believe it.

Someone compared a Ham radio Hamfest to a Star Trek convention, so this is not a good example. Then, he asked me if Ham radio is a cult. However, not all cults are bad.

>When was the last time you saw someone
>walking down the street wearing a mask to make them look
>like a Klingon?

When was the last time you saw someone wearing a hat with their callsign on it, a shirt that says "Learn Morse code or Ham radio will become CB", and carrying a bunch of HTs? My guess is not too long ago.

From:K4YZ

>>No, I said that Hams are not: ex-cons, wife beaters, alcoholics, druggies,
>>nut
>>cases, slobs, fruits. But, many are societal (or social) misfits.
>
> No, Vipul...YOU statd MOST hams were fat, and are (social) misfits. You
>can't have it both ways.

I am not having it both ways. I did say that Hams are social misfits. But I also said that Hams do not have those other negative qualities mentioned.

>Obvioulsy you LIKE being "weird" because
>you continue to maintain the basic vestige of what YOU consider "weird", tha
>Amateur Radio license.

I can have a license and get the benefits from having one. Is it wrong to have a dialogue to change the hobby from within so that my interests get more participants? And, the demographical comment is for the improve the image of the hobby.

From AA2QA

>I still get a big laugh over the HT statement when just about
>everyone is yakking on a cellphone (especially the idiots trying to drive

>while yakking on the phone - and running red lights to boot).
>

I was quoting someone else.

> I can't believe the folks wearing ear protection with those radios
>(oh, cell phones; but they are nothing but a duplex HT connected to the
>telephone system - and my HT can connect to the telephone system too) stuck
>under one of the earpads so they can look busy and chat for hours on end.
>Yep, the hams sure are a strange group, huh?

Even better example - pagers. Also appointment schedulers. There are a number
of devices a non-Ham could have. Your point makes sense.

Hi William, (Bill?)

I don't have a number either. That's the reason I worked the contest. Each
contact gave the other station a point and I got to log another Ten-Ten

number for my membership. I'm not a contester, it was just fun for me. I "casually" worked (...or attempted to work, hihi.) 30 or so stations. Take care now.

Jeff, that claim has been discussed in r.r.a.p. several times
before and been shot down each time.

NO ONE can "prove" an alternate-time continuum or "what
would have happened."

>One of dozens
>of examples: There would not have been any ham radio after WWI if it
>hadn't been for the ARRL's efforts fighting the Navy's desire for all
>radio to be under military control.

Oh, dear, another alternate "reality." Thomas H. White does a
scholarly presentation of early US radio regulations for ALL radio
services here prior to WW2. I would suggest that you study that
the USN of that time was simply seeking control of all common-
carrier radio services to be under USN control. It wasn't just
"military." Those recommendations were shown the light of day
by many others.

Hiram P. Maxim DID go to Washington and convinced a bunch
of lawmakers that amateurs "should" have their own band after
WW1 but it is disinformation to say that he or "just" the ARRL
"made amateur radio possible."

Neither was any ARRL Handbook edition on any national top-
ten, top-twenty, or even top-hundred best-seller list by any of
the three publishing industry statistics.

Quite true, Bill.

Not only that, non-morse-tested Technician Class licensees
are perfectly free to use manual telegraphy on allocated
ham frequencies above 30 MHz.

Imagine that, UN-tested in morsemanship allowed to use CW!

:-)

Okay, I will accept that correction. Thank you.

However, shouldn't ARRL be informed also?
My rather old Handbook says 1914...

>the time.

Okay, I accept the correction on 1916.

1916 was, um, 87 years ago. Vacuum tubes were around but
not much in use by amateurs yet (Rev. Callsign will say they
were something like plentiful or "legacy devices").

1946 is only 57 years ago. What was the percentage of ARRL
members then? Greater than 40%? Less than 40%? Today,
stretching some percentage points in favor of ARRL, I count
maybe 27% (using a very big stretch since ARRL doesn't
present up-to-the-date exact numbers) and that shows a
decline in percentages over an 87-year period from 1916

> W1AW reportedly differs from its competition.

So are we comparing W1AW operation, content and operator(s) character to K1MAN operation, content, and character? Looks like it.
One thing that makes it difficult to compare is that K1MAN BC is a one to three man (creeps?) operation some where in Maine. W1AW BC is a multi-man (angels?) operation, in content and operations, particularly, somewhere in Connecticut. How do you judge the character or compare the character of a multi-man organization with Washington lobbyests and communcation law firms on retainer to a one-three man operation on a low budget?
>
> The list below refers to alleged character and lack of cooperation
> issues which can be used by FCC to revoke a ham license.

As a barrister, one will recognize the following as libel proof innuendo, of course.

> Does W1AW send felony affidavit complaints to people who complain? No.

This implies that K1MAN sends affidavit complaints to people who complain. I believe the record will show that K1MAN has sent affidavit complaints to protest those who jam his on-air BC attempts. I "complain" about K1MAN. I did not get named on a felony affidavit.

etcetra.
>
> The next list is about proper engineering practices.
>
> Has W1AW ever been AWOL for inspection? No.

Knowing something about W1AW operations, I don't think you want to use this for your case.
>
> Does W1AW use distorted transmitters?

Amateur equipment failure is prohibited????????

etcetra.

I'm still trying to decipher "en leiu". I'm guessing but did you mean
"in lieu"?

I used to own a backup linear amp which was solid state. All of my high
power linear amps use tubes. With one exception, they were all produced
within the last ten years. While it bothers me that contest line scores
and "Section News" have been removed from the pages of QST, an article
on a piece of equipment using vacuum tubes doesn't upset me. It'd beat
"The Doctor is IN" hands down.

It would be silly for you to confuse advertising space with editorial
content.
More ad pages pay for more editorial pages.

Foghorn Lenhorn never worked IN or for the Department of State and cannot possibly "know" its "motivations". That hasn't even slowed down his input on "knowing" what could or couldn't, has or hasn't worked as an order wire for a RTTY circuit. It hasn't prevented him from "knowing" who is or isn't on a Key Officers list or from "knowing" that the State Department uses Radio Officers despite State's never having had such a position title. Doesn't that just ruffle your feathers?

Your face should be as red as your comb from all your recent gaffes.

Are you writing of those fellows elected by the membership?--the folks with a definite term of office?--the ones who can be voted out by the members of their division? Those people? Why is "decisions" in quotes? Why is "deciding" in quotes? Why is "represents" in quotes?

> The only "guarantee" of "democratic process" in "representation"
> comes from the Word of ARRL that it does what it says.

Why are the several items above in quotes? ARRL members see directors replaced by vote of a Division's membership on a routine basis.

...you'll be more careful, Brian. I broke no regs in my operation from
any DX spot in which I operated. Your problem then as now is that you
chose to attack the wrong target. Len's situation is quite different.
He made a number of statements which were at best unfactual; at most,
deliberate falsehoods.

His claims were easily refuted. It'd be trickier with something like
your alleged verbal permission to operate from Somalia.

Are you saying that those that are on frequency long before the k1man transmissions are required to leave the frequency when K1MAN comes on?

If you have need for a loss antenna, go for it. I should have had one this morning when chasing Johnston Island on 160m. It was far too easy to nail AH3D with three calls. Maybe the broadband T2FD would have permitted me to work him on 160, 80 and 40 at the same time if (and here's the rub) he could have heard me.

I've never had use for an antenna which requires a linear amp to break even on gain when transmitting. I have used and do use loss antennas when receiving on 160m or 80m. I can rotate them to null noise and use a preamp to bring up the desired signal.

Of course you must have HF capability if you want to operate MARS. That is where the nets are that you must check into to get the proper amount of time to keep active.

I believe you are correct. A minimum of two frequencies are required.

Most of the MARS freqs are just outside of the 'normal' ham bands. Although some are quite a bit out.

If one only has a older rig I would recommend staying away from AF MARS then. Our primary is way out of the ham band ranges.

I don't have an argument with Cebik. I wrote that his blurb about the
T2TD was incorrect. The man can make a mistake. B&W does not claim
that their antenna is a T2FD. The MARS site makes no reference to a
T2FD. The dxzone site is a main page. You never did tell us to which
manuals you referred.

> Unless you're willing to concede that there are contemporary uses of
> the T2FD for which the 1949 QST article could never have forseen.

or what? This isn't even a sentence, much less a paragraph.

Cebik is a talented antenna man. Even Cebik can make a mistake or not know the history of an antenna.

Which manufacturer is it which you claim produces a T2FD?

Jim,

Gotta remember that these young hams are most probably very bright and in very supportive surroundings. The six-year-old General in the story is from a family full of hams, home-schooled, has been reading since age 5, etc.

One minor matter as highlighted some time ago by Hans
Brakob. An addendum (?) to R&O 99-412 put the type of
written questions entirely up to the VEC QPC...the FCC
took away minimum questions of a particular type such as
regulations, technical things, etc., and just stated a
minimum number of questions per element.

>I wonder if any freebanders decided to get a ham license (general or
>extra, the ones with HF privs) and operate legally on ham bands and

No? :-)

>All the above can be explained by the fact that it reduces costs
>for the FCC.

I think that was clearly stated in Congress' initial Biennial
Review as well as up front in NPRM 98-143.

> 73, Brian/N0iMD

Brian,

Do you really think I was doing something the hard way because of my
personal choice? Asking for a better way and getting a better way are

two different things. I didn't have access to satellite equipment and certainly wouldn't consider SATCOM voice an alternative for maintaining a 24 hour per day circuit which handled high volumes of traffic.

The point I made was that the government was using such circuits. Nobody was interested in whether I had a better way or not--I was there to run the existing circuit. Multipath propagation and the slow 75 baud RTTY circuit were the unpleasant parts--the CW was fun.

Dave OH2/K8MN

2003 Google

==========

That was from January 3, 1998, over FIVE YEARS ago.

Five years and one month to be more accurate...

Is the colonel's skin so thin that he must, like the resident Reverend Callsign, be continually going back going back going back to old disputes? Yes, it must be, for the colonel is NEVER wrong, not ever.

Here's another -

==========

From: Dave Heil <k8mn@clinet.fi>
Date: Mon, Jan 5, 1998 00:44 EST
Message-id: <34B07331.682@clinet.fi>

>You failed reading comprehension. My post stated that CW was used to
>coordinate openings/closings, QSYs of an RTTY circuit.

Ok, let me requote, word for word, what you originally wrote:

>>>about? FYI: I was handling the QSYs, opening and closings for a
>>>government 75 baud circuit via CW from late '87 through late '89 from
>>>Guinea-Bissau. Guess we didn't know CW was obsolete, huh?

Firstly, you didn't qualify "government." Since you call from a Finnish server, have an OH2 (Finland) slash on your signature, and Guinea-Bissau is an independent country, one needs telepathy to accurately attach "US" in front of "government." Secondly you wrote "75 baud circuit via CW..." which could be a high-speed CW one as much as TTY; "baud" is the old rate name in all telegraphy.

If this was a United States government link, that slow a rate sounds suspicious considering that the military and State Department were already starting to upgrade to 110 Baud (100 WPM) TTY in the late 1960s. Commercial TTY users were doing the same at the same time. Lots of older 60 WPM TTY machines were becoming available as surplus by the mid-1970s, many being converted for

TDD use by hearing-impaired persons courtesy of many clubs of
ex-telephone-company-workers.

Now, I'll grant you that surplus telecomm equipment COULD have
gone into use in Guinea-Bissau considering that country subsists
largely on grant money from other nations and such aid is of minor
value. [the USA is contributing $2.5 million to them in proposed
1998 aid grants] It's difficult to envision a US government circuit
running that slow some 20 years after starting to upgrade to 100
WPM machinery.

>Now we get a geography lesson from Len. It was a U.S. government
>circuit, Len. It wasn't 75 baud CW; it was 75 baud RTTY with CW to
>coordinate it.

There's LOTS of geographic, socio-political information available
on the Web, many site choices. ARRL publications don't carry
much of such information. Anyone with Web access can look them
up. As to "lessons," do you think everyone knows ALL the small
and emerging nations of the world?

Why does an RTTY circuit (of any speed) need "CW to
coordinate it?" RTTY circuits have been used on HF since the
1930s without any extra CW circuit for "coordination." It's a very
simple task to tune in an 170 to 850 Hz shift RTTY signal and lock
onto mark and space with an RTTY demod. "R-Y" generators
were common in old 5-level days, even one-print-line "Fox Test"
generators. ???

Len Anderson

==========

That one is more current...from January 5, 1998! :-)

The colonel never did justify anything insofar as technical
procedures. On RTTY radio circuits anywhere else, the
TTY is used to "coordinate" things (the term "order-wire").
If TTY fails in "coordination" then the circuit won't be
any use in regular TTY traffic, will it?

While "CW" (common term for on-off keyed continuous
waves) may be "fun" to morsemen, a State Department
radio circuit isn't supposed to be some government-run
radio disneyland for its staffers, is it?

>Most African countries are former colonies. Guinea-Bissau is an armpit.
>You missed fish, shrimp and lobster as major exports--lots and lots of
>fish, shrimp and lobster. As fascinating as all of this is, it does not
>address statements made by me regarding the use of CW by the USG.

No matter how I "addressed it," the recipient refuses to
accept delivery! :-)

"Armpit" or not, the colonel never technically explained ANY
use of OOK CW to "coordinate" an RTTY circuit which,
presumably, became fine for TTY message transmission
once CW "coordination" was done! :-)

>So far, the only questioning I've ever received on the issue is from
>you. Others seem to understand my frequent explanations.

"Others" haven't commented...except maybe voices in
your head. "Others" weren't there or doing comm from
there at the time. All we readers had was your claim.

The alleged procedure you outlined is NOT in radio
communication textbooks or military manuals written
from the 1950s on through the 1980s and available for
public (declassified) reference.

Perhaps some "others" can jump in on this 5-year-
dispute over the colonel's Honor and Claims to explain
that State Department procedures are highly classified
on a need-to-know basis? Yes, that is a good way to
Avenge Honor, hiding behind alleged classified-so-nobody-
can-say-you-are-wrong "procedures." Such excuses can
be airlifted in by those wonderful black helicopters by the
ton to buttress your argument butt.

Today, last year, and some time before that the DSN has
and had the procedures to use along with descriptions of
DSN circuits through both land and radio and satellite
relay circuits. It's not any sort of violation of anything to
explain generalities in US government communications.
It's only a serious (very serious) violation to reveal the
encryption keys, method of encryption, some of the
technical synchronization details, and the contents of
sensitive messages.

>I've never
>claimed that the use of CW for this purpose was common or worldwide.

No...and neither have you revealed much of anything else
of a radio communication nature. You are not a nature lover,
only a self-presentation-as-expert kind of lover.

>You'd, of course, not have any way of knowing what is or was done by
>military or government HF radio users in Africa or worldwide in the
>present era--your being a retired fellow in California whose big claim
>to HF operation was half a century back.

I claim only what is declassified. Public sources are
available. I've given references, can give more, even
repeat the title of a nice NavShips technical manual that
explains proper procedures for TTY and RTTY along
with technical details of the mechanical TTYs. It was
available for public sale through the US Government

Printing Office in the mid-1970s. It was used in all
military branches as a common text on TTY until the
conversion to electronic data terminals beginning in
the late 1970s.

The colonel's argument was that near-equatorial
regions of middle Africa prevented regular use of RTTY
there so CW (on-off keyed continuous wave) had to be
used to "coordinate" things. There aren't many in here
who've operated anything, let alone set foot in middle
Africa. That's a good basis for the usual fish-story
snow job...hoping that nobody will burst the bubble.

The first pin-prick in bubble-bursting is the "need" to
"coordinate" things using OOK CW and then switching
to another mode. If "coordination" through OOK CW
works but other modes don't, why isn't procedure stated
to use OOK CW for regular traffic? If RTTY would work
for regular traffic, why wasn't that used to "coordinate"
the circuit? The "explanation" was the claim to conditions
in equatorial Africa "prevented coordination." Circular
logic. Invalid. Rationalization of newsgroup message
statements, NOT any sort of "technical explanation."

This is like another "colonel" (claimed, retired) "whose son
was behind enemy lines in Iraq" during the Gulf War,
"sending intelligence data back by CW" on HF. Another
snow job. Nobody in the newsgroup was IN the Gulf War
therefore no one could discount a claimed 'retired colonel'
whose SON "was there." Snow job. Fish story. No way
to prove the tale by public references...except to show
references of 1980s and 1990s US military communications
doctrine and equipment that were public.

>There is no Department of State listing of "key posts". There is the
>"Key Officers" listing, as you've discovered. You can assume whatever
>you'd like about the hours of operation. Those will remain only
>assumptions.

I've seen embassy staff listings. If State wants to embelish
labels they can call them anything they want. :-)

I can also present DSN numbers to dial up directly many
embassies...if DSN connection is permitted. Such calls
will go through to someone on-watch is the supposition.
It is inconceivable that embassies and offices would lock
up after an 8-hour day and leave no one in contact.

It doesn't bother me that the Defense Switched Network
can complete a circuit on landline OR via radio circuit,
anywhere in the world, including equatorial Africa..

If a communication by radio could get through other
world equatorial regions three decades before the colonel's
"armpit" time, the alleged failure of middle African radio
circuits for State was not explained nor reasonable.

>You are not in a position to be an expert on what the U.S. Department of
>State does. You could learn a great deal more from public documents.
>There are a great many things that you'll never know. My superiority in
>this case will consist merely of "I know more about it than you know".

Heh heh heh..."there we have it."

I'll never know enough. I'll never accept fish stories or snow
jobs or black helicopters. Just as well... :-)

The colonel is once again "superior." US Department of State
has and does things no one will ever know? Or only known by
a very privileged few? State uses radio in "different ways" than
all other radio users? Of course...apparently...just like all US
radio amateurs "must" test for morsemanship in order to be
granted an amateur license having below-30-MHz privileges.
The colonel has stated...he is superior...he worked for State!

The rest of US citizens are rather familiar with what State has
done. It hasn't been that good in the last half century, has it?

Now, in truth, State Department procedures and uses aren't
directly related to amateur radio policies. Neither are military
radio communications directly related to amateur policy even
if Army, Navy, or USAF comm nets were each larger than the
whole of State's. But...they all involve RADIO and radio
technology, the use thereof, and they all set a base for other
radio services to follow or as examples of what can be done.

==========

I can take the time to counter FIVE-YEAR-OLD messages and
rehash all old outrages by the mighty morsemen. I have the
messages from that prehistory. This constant rehashing is
wasted time, time that can be used to look FORWARD, not
backward or to follow someone claiming "leadership" in an
avocation just because they call themselves "superior."

Gruss gott, colonel, go on back to Google.

>You're all over map regards "not monitoring" exams!!!

Right Rev. Jimmie Callsign will make you go back to
Google with prissy, pedantic paragraph-parsing
screams of outrage that "he never said that!"

:-)

>No ONE is monitoring exams, and if the ARRL wants to push Farnsworth
>to 35 WPM, then -Jim-/N2EY ain't enuf of a ham to stop it even if he
>wanted to. Once you dudes get away with breakin the law there's no
>return, and you've been there and back. It's a runaway train. Call
>FEMA or Homeland Security.

That wonderful example of noble long-time amateurism,
the misery mule, likes VEs "holding hands" during an
exam session. ? What must he be imaging?

VEs aren't staffers of the FCC. The FCC gives VEs and
VECs virtual carte blanche ONLY in observing themselves
as well as the examinees. They are de facto "officers of
the court" in a way, beholden to NO ONE but themselves.
No checks, no balances except among themselves or
between them and their VEC.

According to post-examination disputes of the FCC with
VEs and VECs, they can only find improprieties as a
result of checking test result documents VEs return or
as a result of "tips" from others.

There are NO proper checks-and-balances. All testing
is conducted by VEs/VECs who are the sole on-site
monitors. "Carte blanche?" It's enough for Blanche to
role her cart away, shaking her head...

>We're basically in a holding pattern until S25.5 is
>> changed, and the changed treaty (yes, it really is a treaty) is
>> ratified by the US.
>
>Ratified?

Rev. Callsign thinks ITU-R Recommendations as some kind
of "constitutional amendment" to "ratified" among the states.
:-)

>> However, note this simple fact: Hams today still use Morse.
>
>Hams still pick their noses. Is that a good thing?

They are free to pick their noses...unfortunately some
don't pick the right ones... :-)

Noses can generate sinus waves...

>In fact,
>> it's the second most popular mode on the HF/MF ham bands. Keys,
>> keyers, Morse software, and CW transceivers are being made, bought,
>> sold and USED today in large numbers. In fact, there are probably more
>> hams on the air today using Morse code than at any time in the past.
>
>IS that because there are more hams today???

As Cecil used to remark, "If all you have is a hammer,
everything looks like a nail."

Rev. Jimmie has only the "CW hammer" as his favorite
tool. If a radio receiver don't got no BFO or a transmitter
don't got no morse key jack he no like it. To him, peering
nearsightedly from his ancient, creaky pulpit, everything
Good and Proper in amateur radio involves MORSE with
all caps pronounced as if an edict from Divine Sources.

Evidence of mental near-sightedness comes from NOT
realizing that there are MORE PEOPLE in the USA
NOW than before. Without any benefit of any poll or
even looking at an almanac (certainly not year 2000
Census for the USA), he states with equanimity and
the surety of a morse apostle that "more hams on the
air today using CW than ever before." :-)

Rev. Callsign does NOT present an equal case on
counting those using Voice or Data modes in comparison
with OOK CW. NOT. That's a "fair and reasonable
factual, accurate" response according to him. No

information on other modes, no recent polls, nothing but
statements solely about OOK CW.

>> Hardly "clinging to the past".
>
>Clinging to the past.

...sigh, one of the original "clingons" in ham radio.

>> > I'm also sorry they stopped making 65 Mustangs...But got over that
>too.
>>
>> Remember how the "New Coke" flopped?
>
>Remember how the Restructuring flopped with O.F. hams?
>No-Code=No-Ham???

Rev. Callsign thinks amazon.com is a "not making a profit"
because they can resell ARRL publications without
shipping charges...while orders to ARRL Newington
charge extra for shipping.

R&O 99-412 did not affect Rev. Callsign one bit insofar as
his amateur radio privileges...but it raised holy heck with
his personal picture of divinity as an upper-upper OF.

>> > >Some think it is needed regardless of the ITU requirement. A
>> > >particularly large club began rejecting changes in the code as early
>> > >as 1975 when forward thinking hams begans questioning it relavence.
>> >

>Titanic Pump Keys.

Rev. Jimmie *IS* the past. He lives there. One might suspect
that he has some kind of highly-advanced time communicator
to post on the Internet in this time-continuum from the past.
Probably using a morse key to modem translator... :-)

>with seven license classes. One of those
>> classes (Communicator?) would have had no code test, and very limited
>> VHF/UHF privileges.
>
>Jim, way, waay, waaay too late to be pushin that CRAP!

What was that about "noses?" I doubt he has a working
model. He should realize that horse died years ago and
all the whipping of the corpse won't bring it to life or make
the smell go away.

>> But most hams (not just members of any club) opposed such a system,
>> and FCC eventually gave up on the proposal.
>
>And amateur radio was set back a quarter of a CENTURY!!!

He thinks that some "war of attrition" had a glorious victory
for the old-timers and the old ways.

>> This was almost simultaneous with the idea of taking 220 from hams and
>> creating a new "Class E" cb band. Lotta weird ideas back then. Musta
>> been the bell bottoms and platform shoes.
>
>Or Exlax.

Rev. Callsign was never young. It would seem he was
born wearing an eye shade and sleeve garters, hand
flexed to operate that Icon of Excellence in Radio, a
morse key. Why he thinks that some mumbling about
"mod" anything will take away the mental picture others
get is beyond me...

>> > >You are wrong.
>> >
>> > Not until you provide some specific cite I'm not. Sorry you "think"
>> > otherwise.
>> >
>> > >January is about tube radios.
>>
>> Is that a bad thing?
>
>Yo Jim, is your kit radio a tube radio???

He probably has his Elecraft KIT (which he designed, he designs
ALL his radios) modded for a tube circuit of some sort...

>> > And I SPECIFICALLY said with the exception of items of historical
>> > relevence...That article is about history and nostalgia...NOT about
>> > excluding new technology.
>> >
>> > >Tube technology, Steve, tube technology.
>>
>> Are tubes no longer used by hams?
>
>Yo Jim, is your kit radio a tube radio???

Elecraft ought to make their KIT cabinets with electro-
luminescent panel inlays. That way they could all "glow
in the dark" and make boatanchor types feel warm...

>> > > Clinging to the past, Steve, clinging to the past.
>> >
>> > "Clinging to the past" would be publishing stories on tube
>technology TO

>>
>> Exactly.
>
>No, no, no. Clinging to the past would be publishing tube radio
>CONSTRUCTION articles en leiu of publishing TODAY'S amateurs radio
>activities in the ARRL Sections. Hello Dave Heil! Whare are you on
>this???

One-tube regenerative receivers were a tremendous techie
breakthrough in the 1930s. Tradition of OFs Nostalgia
demands the Tradition to Live, always rediscovering the
past and glorious achievements of yesteryear. Sigh.

The colonel is presently living in the State of Google but
is grabbing his official ARRL Dictionary to correct a
couple of your typos to show you are "always error prone
and therefore every single post you make is of no
consequence." Some things are SO predictable.

>> Would it be better if car magazines no longer printed articles about
>> '65 Mustangs, because that would be "clinging to the past"? How about
>> listening to "oldies", or classical music - all "clinging to the
>> past", right? Would it be better if all vintage airplanes were
>> grounded and antique cars removed from the road, because those things
>> are all examples of "clinging to the past?
>>
>> I don't think so!
>
>It would be nice to see Jim "cling to the future" once in his amateur
>career.

Warrior Clingons don't do that. The future doesn't exist yet so
Google doesn't have any references on the future nor has ARRL
published a "Future Handbook." He can't post on the future
because he doesn't have a reference to the future so that he
can post mannerly, orderly, factually correct things on the
future.

This "electronics industry wizard" who "gave talks to industry"
probably doesn't read electronics trade publications received
at his workplace. Someplace. Those trades regularly carry
articles on the technology that will come in the near future
as well as discussions of standards that will be part of the
future. If it isn't stated in QST, it won't happen for him.

>Pretend that you like vanilla ice cream with mint chips, just once.

If the spoon isn't shaped like a morse key, I doubt he would
try a new flavor.

>> Here's a question: Should QST refuse paid advertisements for things
>> like telegraph keys, because some folks consider such things to be
>> "clinging to the past"?
>

>some folks consider such things to be "clinging to the past"?
>
>> 73 de Jim, N2EY
>
>Jim, quit clinging to the past. I know it's scary, but I'm confident
>that the closet monsters won't get you.

Them monsters won't come out of the closet. He is a pedantic
prissy puritan in radio matters. I suspect the monsters are all
under his bed like Calvin's...(from the late comic strip Calvin &
Hobbes by Bill Waterston). It was better, far better than ARRL
tailored comic strips about "Archie." :-)

> I don't hate Hams.

There you go using that "H" code word again.

>Certain aspects aren't being realized and I want to
> participate in those aspects.

Like what for instance? Name some of those aspects
that aren't being realized. We all know that a hamfest
isn't one of them.

> Much of this is due to what most Hams aren't
> interested in those aspects.
>

Like what? I might be interested in them, or not
depending on what they are, you never seem to say.

> >Check out the next Star Trek convention if you
> >don't believe it.
>

Where did the rest of my statement go? When you
cut stuff out of a post you need to leave enough so
people can follow the line of thought. Also putting
a <SNIP> can let the reader know that a part has
been cut out of a post.

> Someone compared a Ham radio Hamfest to a Star Trek convention, so this is
not
> a good example. Then, he asked me if Ham radio is a cult. However, not all
> cults are bad.

Then why do you keep on raggin on the hams as
being part of a cult? BTW I'm the one who did
that comparison

>
> >When was the last time you saw someone
> >walking down the street wearing a mask to make them look
> >like a Klingon?

>
> When was the last time you saw someone wearing a hat with their callsign
on it,
> a shirt that says "Learn Morse code or Ham radio will become CB", and
carrying
> a bunch of HTs? My guess is not too long ago.

The thing is at a Star Trek convention a person dressed
up as a klingon is a "NORMAL" part of the convention.
Just as a callsign hat and Morse Code "T" shirt are a
"NORMAL" part of a hamfest.

Carrying a number of HTs seems to be new trend in
the ARS, but when you have APRS, and multi bands
to cover I can see where it might be done. BTW at
work I carry my work radio, and I carry my EMA
radio (two radios at once) , I used to get kidded
about it until we had an emergency at the school and
I was on the school radio and the fire repeater at the
same time coordinating the school and ambulance
response, now I don't get ANY flack! The EMA
radio has ham radio frequencies in it also, so that
saves me at least ONE radio.

Interesting stuff, Lennie, but what did you "prove"? Nothing you quoted disproved anything Dave Heil's been saying.

On the otherhand, recent posts made about you HAVE proven that you HAVE BEEN lying.

And speaking of "looking forward", when can we look forward to seeing you signing posts with an Amateur calllsign?

'X-No-archive: yes'

Was anyone under the impression that the FCC has to "prove" anything in front of the ALJ? No mon freres, it is the licensee, not the FCC, that has the burden of proof in front of the ALJ. The licensee must show the ALJ why he should remain a licensee, after being hauled before the ALJ by the Commission.

Remember we are talking about an administrative body here. It isn't the kind of court where we are talking about citizen's rights. The Commission is charged by Congess with overseeing a body of administrivia. They are presenting information to a Judge of administrivial matters, who will rule in the FCC's favor. Who knows more about FCC administrivia than the FCC?

Here's how it works. The FCC says, "According to our records, we sent you a letter over a year ago about a bunch of stuff we thought was wrong in the operation of your station.

You sent us back a letter that didn't convince us you understand our rules, or our right to enforce them. Now, a year later, you still haven't fixed what we asked you to fix about the operation of your station. Let's go see the Administrative Law Judge."

So it's off to see the ALJ.

On the happy day, the ALJ says, "OK Mr. licensee, tell me why you should remain a licensee? Sitting in front of me here is a pile of FCC monitoring info, records of trips to an apparently empty ham shack that was on the air at the time it was apparently empty, a bunch of complaints from other licensees, another list that the Compliance and Information Bureau says are thirty-five apparent violations, quite a few tape recordings of you stomping all over people who were already using the frequency, that were submitted by impartial OO's with accompanying affidavits regarding their legitimacy, and several felony affidavit complaints you illegally sent out to people who complained about your station. You may explain Sir."

After the licensee explains, whether it takes five minutes or five hours, the ALJ says, "Thank you sir," (then he shuffles some papers for effect) and then he says "this body rejects your explanation, which is indicative of your lack of understanding of the Commission's rules and accordingly, your privilege to operate a ham radio station is hereby revoked, as is your primary ham station license. Have a nice day. Next case please."

And that's how it goes. Don't be too upset by it. You need to remember it is only a hobby. It's not like the ALJ is saying he can't worship freely or vote in the next election.

If the ALJ could speak in plain English, he would say, "Look dude, I hate to tell you this, but it is the Commission's game, not yours. They decide who is playing nicely, and following their rules, and who is acting like an asshole. If you can't convince them you are on the up-and-up, they send you to me. And I break the news as gently as I can. Game over, turn in your ticket, hasta la vista baby. Try stamp collecting or something. There are lots of fun hobbies that don't have as many rules. Now get out of my Court, you clown."

And that my friends, is that. It really is that easy. If you don't believe it, obtain and read the record for any ALJ proceeding in Amateur Radio.

Yes, especially as I didn't notice what it said, as I couldn't be bothered to decipher it. Abuse in CW doesn't grab anyone's attention, so most can't be bothered to do it in the first palce, and if they do no-one can be bothered to report it, since they don't really notice it. That's pretty much what I've been saying.

Typical... most nutjob conspiracy theorists don't think that any major event
just happens, it's always part of a massive dark conspiracy. Kind of the
way they were all saying that the 9/11 terrorist attacks were all planned &
carried out by the government.

>Let us know how it works out once you obtain a license for amateur radio
>transmission.

Tsk, tsk, tsk. Still on that kick...

I've had a commercial license for commercial radio
transmission since 1956...a mere 47 years in March.

The FCC doesn't require any of its staff or commissioners
to have any amateur radio license in order to set regulations
or enforce those regulations.

I never had any reason to get any radio license to work in
military radio transmission, including being an NCO and an
HF radio transmission operating team leader.

I never had any reason to use my commercial license to
transmit RF energy (higher than any Part 15 or 95 limits)
on DoD contract work on frequencies spanning from LF to
Ku band in the microwave region (up to about 25 GHz).

My only need for the commercial license for any RF
transmission after 1960 was in the early 1970s on an
RCA Corporation funded R&D project...450+ MHz and
1.6 GHz.

In order to make commentary in a newsgroup I have to
have an amateur radio license with below-30-MHz
privileges?!?

Based on the past observations of the US Department of
State, I wouldn't want to. :-)

The colonel (no relation to the Sanders guy, but still chicken)
doesn't know that I never questioned the US Department of
State in this newsgroup.

>That hasn't even slowed down
>his input on "knowing" what could or couldn't, has or hasn't worked as
>an order wire for a RTTY circuit.

Tsk, tsk, tsk, I know basic procedure in most radio circuits
used by the military now as well as "BD" (before "data"),
most other US government radio circuits, and commercial
communications carriers. None of those use CW as an
order-wire on RTTY radio circuits. :-)

I have no knowledge of what US embassies use in equatorial
Africa to overcome their terrible radio conditions. I would
suggest some liason with the BIGGER radio net users in US
government to help them solve State's problems.

>It hasn't prevented him from
>"knowing" who is or isn't on a Key Officers list or from "knowing" that
>the State Department uses Radio Officers despite State's never having
>had such a position title. Doesn't that just ruffle your feathers?

Not at all. The colonel's problem is the colonel's problem and
can't be solved by logic, reason, or common sense.

A shovel might have helped all the readers with that mighty
Snow Job of five years ago.

>Your face should be as red as your comb from all your recent gaffes.

My comb is natural-finish aluminum...virtually indestructible
and I've had it for more than 15 years, still retaining hair on

the head for its use. :-)

Now pull up a bag of cashews and explain EXACTLY WHY
some equatorial African region radio circuit "needs" to
switch to CW in order to "coordinate" schedules and other
pertinent circuit data...yet a non-CW mode is used for
regular traffic?

Do morse code modes "know" the difference between regular
traffic and "coordination" information?

They don't?!? Well, then, why isn't the "coordination" data
exchanged using the same mode as regular traffic?

I've been waiting about 5 years for a valid reason. Hasn't
been posted yet...

It was my understanding that shuttles reentering the atmosphere are always
visible and sonic booms are heard, so I didn't think the article was all
that creepy. However, it does kind of give a sense of foreshadowing of
yesterday's tragedy.

A license which, in the absence of a STATION license with SPECIFIC parameters on operating frequencies, modes, hours of operation, location, antennas and power, is useless.

>I never had any reason to get any radio license to work in
> military radio transmission, including being an NCO and an
> HF radio transmission operating team leader

And what allowances did the Army make so you could decide the operating frequency, mode, who you called, what you discussed, choice of antennas, operating times, etc?

>I never had any reason to use my commercial license to
> transmit RF energy (higher than any Part 15 or 95 limits)
> on DoD contract work on frequencies spanning from LF to
> Ku band in the microwave region (up to about 25 GHz.

And those DoD contracts did not allow you to "operate" any radio on any Amateur Radio allocation, nor with the aforementioned power, mode, etc etc considerations at YOUR discretion.

>My only need for the commercial license for any RF
> transmission after 1960 was in the early 1970s on an
> RCA Corporation funded R&D project...450+ MHz and
> 1.6 GHz.

So...that hallowed ground of commercial radio licensure let you "operate" on a few spot frequencies at 70cm and 23 cm in the 70's.....Whew...I am impressed. (not!)

>In order to make commentary in a newsgroup I have to
> have an amateur radio license with below-30-MHz
> privileges?!?

By your own admission in the foregoing, you have NO practical experience in matters pertaining to Amateur Radio practice or regulations.

Your comprehension and understanding of them are dubious based upon your frequent faux pas in this forum. No doubt your conduct on the air would soon bring you to the attention of an FCC monitoring station.

Forget being unlicensed...you're just plain incompetent.

Steve, K4YZ

The Foghorn is entitled to no more of an explanation than already
provided.
It has been explained yet. You've just been having difficulty with the
comprehension part.

> While "CW" (common term for on-off keyed continuous
> waves) may be "fun" to morsemen, a State Department
> radio circuit isn't supposed to be some government-run
> radio disneyland for its staffers, is it?

Nor are Foreign Service members penalized for enjoying their work.
The need for you to point out in an amateur radio newsgroup what "CW"
stands for is duly noted.

> >Most African countries are former colonies. Guinea-Bissau is an armpit.

Pretty funny stuff coming from a guy with your history, Len.

> >You'd, of course, not have any way of knowing what is or was done by

> the late 1970s.

Interesting (not). I never did TTY work in the military and I really
don't care.

> The colonel's argument was that near-equatorial
> regions of middle Africa prevented regular use of RTTY
> there so CW (on-off keyed continuous wave) had to be
> used to "coordinate" things. There aren't many in here

> Africa. That's a good basis for the usual fish-story
> snow job...hoping that nobody will burst the bubble.

Hearing those black helicopters again, Foggy? Guess you'll have to
continue your quest for information. You're kind of drifting far afield
from your silly claims that I claimed originality for the idea. Now I
wonder where THOSE archived messages went.

> The first pin-prick in bubble-bursting is the "need" to
> "coordinate" things using OOK CW and then switching
> to another mode. If "coordination" through OOK CW
> works but other modes don't, why isn't procedure stated

> for regular traffic, why wasn't that used to "coordinate"
> the circuit? The "explanation" was the claim to conditions
> in equatorial Africa "prevented coordination." Circular
> logic. Invalid. Rationalization of newsgroup message
> statements, NOT any sort of "technical explanation."

Not circular logic in the least. As previously explained on numerous
occasions, RTTY did not always work for regular traffic. CW did--but
your're drifting rather far afield from your statements that I claimed
originality for its use.
Where are those archived quotes?

> This is like another "colonel" (claimed, retired) "whose son
> was behind enemy lines in Iraq" during the Gulf War,
> "sending intelligence data back by CW" on HF. Another
> snow job. Nobody in the newsgroup was IN the Gulf War

> whose SON "was there." Snow job. Fish story. No way
> to prove the tale by public references...except to show
> references of 1980s and 1990s US military communications
> doctrine and equipment that were public.

Don't know him. I never claimed originality for that one either.

> >There is no Department of State listing of "key posts". There is the
> >"Key Officers" listing, as you've discovered. You can assume whatever
> >you'd like about the hours of operation. Those will remain only
> >assumptions.
>
> I've seen embassy staff listings. If State wants to embelish
> labels they can call them anything they want. :-)

You, ahem, YOU brought up "Key Officers Listings" and claimed that I did
not appear in them. It was one of those occasions when, true to N2EY's
explanation of your behavior, you used your slim knowledge of my job to
take a poke at me.
You were bitten in the ass by your own words. Wanna see yourself quoted
followed by the urls again?

> I can also present DSN numbers to dial up directly many
> embassies...if DSN connection is permitted. Such calls
> will go through to someone on-watch is the supposition.
> It is inconceivable that embassies and offices would lock
> up after an 8-hour day and leave no one in contact.

Is it?

> It doesn't bother me that the Defense Switched Network
> can complete a circuit on landline OR via radio circuit,
> anywhere in the world, including equatorial Africa..

Really. I'd like to see 'em put a call through to my former residence
in Freetown. The host country phone system has to work before those
folks can call anyone. That aside, I didn't have DSN, regular telephone
service or anything but HF radio available to me. But we're drifting far
afield. Do tell us if you've found an archived message confirming that
I ever wrote what you've repeatedly said I wrote. No? I'm embarrassed
for you.

> If a communication by radio could get through other
> world equatorial regions three decades before the colonel's
> "armpit" time, the alleged failure of middle African radio
> circuits for State was not explained nor reasonable.

I've never been in middle Africa. I've been in west Africa. I've been
in southern Africa. I've been in southern Africa. Just where is
"middle Africa"?
Oh, as the the rest of your rant, I've never stated just what place I
was in communication with, have I? It might have solved another piece
of your puzzle.
If you hadn't been such a toad, I might have told you. This isn't a
case where I can't tell you. This is one of those where I won't tell
you.

> >You are not in a position to be an expert on what the U.S. Department of
> >State does. You could learn a great deal more from public documents.

> >There are a great many things that you'll never know. My superiority in
> >this case will consist merely of "I know more about it than you know".
>
> Heh heh heh..."there we have it."

Yes, there YOU have it. I know a lot more about something than you
know.
Some things I can't tell you. Some things I won't tell you.

> I'll never know enough. I'll never accept fish stories or snow
> jobs or black helicopters. Just as well... :-)

But you're drifting. What about those archived messages where I claimed
originality for the CW order wire? Where are they?

> The colonel is once again "superior." US Department of State
> has and does things no one will ever know?

Some one knows 'em, Len. YOU won't know 'em.

> Or only known by
> a very privileged few?

Actually, if one takes the past, current and present State commo types,
the number isn't few at all.

> State uses radio in "different ways" than
> all other radio users?

I'm not in a position to know what all other radio users do. Come to
think of it, neither are you.

> Of course...apparently...just like all US
> radio amateurs "must" test for morsemanship in order to be
> granted an amateur license having below-30-MHz privileges.
> The colonel has stated...he is superior...he worked for State!

Oh? Did you think I originated morse testing for HF amateur radio exams
too?
I'm beginning to see part of your problem.

> The rest of US citizens are rather familiar with what State has
> done. It hasn't been that good in the last half century, has it?

N2EY: "Besides, here's a simple, plain fact:

No matter what job, educational level, employer, or
government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr.
Anderson's insults, ridicule, name-calling, factual errors, ethnic
slurs, excessive emoticons and general infantile behavior."

> Now, in truth, State Department procedures and uses aren't
> directly related to amateur radio policies. Neither are military
> radio communications directly related to amateur policy even

> radio services to follow or as examples of what can be done.

There is no obligation on the part of the Department of State to do what other agencies do any more than radio amateurs are obligated to do what military or commercial stations do.

> Gruss gott, colonel, go on back to Google.

Oh, you can take time all right. You've just managed to miss addressing your frequently posted falsehoods. What have you countered? If you are so FORWARD looking, why haven't you come up with that "Extra right out of the box" yet?

> I've had a commercial license for commercial radio
> transmission since 1956...a mere 47 years in March.

Irrelevant. This isn't a commericial radio newsgroup.

> The FCC doesn't require any of its staff or commissioners
> to have any amateur radio license in order to set regulations
> or enforce those regulations.

Irrelevant. We don't have any claims by FCC staffers that they were
going for an "Extra right out of the box".

> I never had any reason to get any radio license to work in
> military radio transmission, including being an NCO and an
> HF radio transmission operating team leader.

Irrelevant. If you'd like to participate in what you've claimed to be a
"fun hobby", you need a license.

> I never had any reason to use my commercial license to
> transmit RF energy (higher than any Part 15 or 95 limits)
> on DoD contract work on frequencies spanning from LF to
> Ku band in the microwave region (up to about 25 GHz).

Irrelevant. You need an amateur license to particpate in amateur radio.

> My only need for the commercial license for any RF
> transmission after 1960 was in the early 1970s on an
> RCA Corporation funded R&D project...450+ MHz and
> 1.6 GHz.

Irrelevant. Your need for a commerical license isn't an issue.

> In order to make commentary in a newsgroup I have to
> have an amateur radio license with below-30-MHz

Some people are just too stupid to be embarrassed.

> The colonel's problem is the colonel's problem and
> can't be solved by logic, reason, or common sense.

Your problem, Foghorn, is that your own words have come back to haunt
you and you've not come up with a single archived post which sez what
you've long stated.

> A shovel might have helped all the readers with that mighty
> Snow Job of five years ago.

You mean the one you still can't lay your hands on--that one where I
claim originality for a CW order wire. You farted and fell on that one.

> >Your face should be as red as your comb from all your recent gaffes.
>
> My comb is natural-finish aluminum...virtually indestructible

They probably couldn't get many guys to send and receive code at 100 wpm
for that many hours.

> Do morse code modes "know" the difference between regular
> traffic and "coordination" information?
>
> They don't?!? Well, then, why isn't the "coordination" data
> exchanged using the same mode as regular traffic?
>
> I've been waiting about 5 years for a valid reason. Hasn't
> been posted yet...

Sure it has, Foghorn. You just don't like it and you don't hold enough
pieces of the puzzle to figure it out. I'm still waiting for you to
post a quote from me which will let you off the hook for your
falsehoods. Maybe you could clue us in about how your stuff was taken

out of context. How about an explanation of your statement that I don't appear on any State Department Key Officer Lists? Looks like you really stepped in the bucket.

Not tricky at all. I was there, I had permission. You had bad
information, said a military commander could not give permission. You
were wrong, but have yet to admit it. You are wrong on a number of
matters, but cannot recognize it.

Dave,

Perhaps you could point out where the imagined "insults" are in the sentence:

"Lack of experience, lack of knowledge and lack of skill are three reasons."

An inexperienced ham, who had not used an efficient HF dipole, might think the
T2FD/WBFD was not much different in efficiency.

A ham lacking in knowledge might not understand how the T2FD/WBFD obtains its
broadband characteristics through the use of resistive loading, which radiates
much of the RF power fed to the antenna as heat rather than RF.

A ham lacking in skill might want to avoid having to adjust a tuner.

A simple dipole that is the same size as a WBFD, fed with low loss parallel
line and matched with a suitable a tuner will have practically identical
patterns but much higher efficiency than a WBFD. Such a dipole is lighter and
mechanically simpler, and when all costs are considered, is no more expensive.

>I've never had use for an antenna which requires a linear amp to break
>even on gain when transmitting.

Nor I!

>I have used and do use loss antennas
>when receiving on 160m or 80m. I can rotate them to null noise and use

>a preamp to bring up the desired signal.

Yep. Which brings up a question - could you have even heard AH3D on 160 if you'd had a T2FD for receiving? Unlike a directional antenna like a loop, the T2FD would pick up noise from all directions.

The GROL is not really a licence anymore. I'm not aware of anything that specifically needs it. It's just an optional qualification for BC engineers. I could pass it if I wanted to, but why bother?

73 de Alun, N3KIP

PS: I have a Bachelor's degree in EE, and have worked in jobs related to RF, so I'm not just saying I could pass it on the strength of my Amateur Extra licence, although IMHO most Extras could get their GROL, if they wanted to be BC engineers, or just to show off! (And many do. That is, get it to show off!).

Thank you! I've went from "CBPlusser" to "Real Ham" to
"damned lid" in just one week. That has to be some kind of
a record, don't it? Dan could have said a lot worse, but
he didn't. That's what was well said, concise and succinct
expression of what he felt. Like I'm now starting to feel
towards you mister anonymous.

BTW what's YOUR callsign there big boy?
The screen name K1MAN Man and email
address of Lloyd@no.spammmmm just don't
get it. Until you put YOUR name or callsign
on the line, your the lid here!

>Bully for you!

Give credit where credit is due, Brain...Spitting out the remanants of having had your head firmly up the old poop shoot sure makes it easier to understand you.

>It "bothered" you so much so that you went on a campain.

"Campain"...?!?! Sensation felt when you trip over your tent?

>Oldies are played on Oldies Stations. No head-banging or classical.

Sometimes, Brain. WZYP intermixes "oldies" with current urban and hip-hop rather nicely.

>Vintage airplane have their own format.

"Own format"? They share the exact same runways and airspace as I do in a "contemporary" aircraft, Brain...To what "format" were you refering?

They they have the same FAA airworthiness papers as a "contemporary" aircraft and require the same airman's certifications to operate as "contemprorary aircraft.

>Antique cars have their own format, and its not Motor Trend.

"Motor Trend" magazine does an nice job of occassionally throwing in articles on "antique" cars. Waht other "trend" were you refering? Thye use the same highway as the one I drive on and require the same operators permit to do so. In some states they DO get those neat "Antique Automobile", or other "vanity" tag.

>QST is a classic in that they offer frequent trips down memory lane,
>to the exclusion of section news.

The also offer it to the exclusion of a sports page or Wall Street results...So what?

>The GROL is not really a licence anymore.

The GROL is in fact a real license. See FCC Rules Part 13.
What you probably mean is that it no longer carries all the
benefits and privileges that it or its predecessors once did.

On that I agree.

>I'm not aware of anything that specifically needs it.

It's required for operation and servicing/adjustment of certain
classes of maritime and aviation stations. See Parts 80 and 87 of
the FCC Rules.

>It's just an optional qualification for BC engineers.

Not any more. The Society of Broadcast Engineers has their (our)
own Certifcation program, as does several organizations dealing with
land-mobile, microwave, and EMC technologies and licensees. Those
"industry certification exams" are much tougher and more detailed
than the FCC exams ever were.

There are no qualifications whatsoever for hiring BC engineers - the
B/C licensee can, and in some cases has, hire Joe Baboon to do the
job. Reputable broadcasters will insist on SBE Certification or
equivalent proven experience.

Several California employers got into trouble with the State Labor
Board for trying to insist that applicants have a GROL for a job
where it is not required by FCC Rules. In practical terms, if the
applicant/employee had a (diploma-form) GROL or its predecessor
license(es) during a time when the FCC Rules required such
license for that job (generally mid-1980s) the employer can
(but is not forced to) accept that in lieu of any other
industry certifcation which may be required of other
applicants/employees.

After the changeover, the newer card-form GROLs plainly stated that
it was not valid for Broadcast use. It may still be there - I
haven't seen one lately.

>I could pass it if I wanted to, but why bother?

Unless you are going to operate or service transmitters where it is
required, you are right.

>PS: I have a Bachelor's degree in EE, and have worked in jobs related to
>RF, so I'm not just saying I could pass it on the strength of my Amateur

>wanted to be BC engineers, or just to show off! (And many do. That is, get
>it to show off!).

Broadcast material is no longer on the GROL exam, at least for the
last 10 years or so since the FCC privatized that exam process
and rewrote the exams.

I'll comment again, Dave.

It's clear to me and to everyone else (except Mr. Anderson) what was going on in G-B (my abbreviation) back when you were there: State Department communications consisted of various systems that happened to be in place and which did the job. The fact that more modern systems were available elsewhere did not mean they existed everywhere. Particularly at the time you were in G-B.

The availability of "surplus" TTY machines and other equipment in the USA means nothing if that equipment and the necessary support can't be transported to where it is wanted - in this case, G-B. So the old CW and 75 baud TTY equipment that was in place and working did the job.

Doesn't take a textbook to figure out that under certain conditions Morse/CW would sometimes get through when the other available modes using the available equipment would not get through. So in those situations Morse/CW was used - mostly to figure out how to get the TTY systems functioning again (chnage frequency, try again at a different time, etc.)

Here's another plain, simple fact:

Mr. Anderson sometimes misunderstands the postings of others. He then equates his misunderstanding as being the actual words and meaning that was posted. When that happens, it is difficult or impossible for him to acknowledge that his understanding is incorrect. He will insist that his misunderstanding is the only possible correct interpretation of what was posted. His memory exhibits the WORMI characteristic: Write Once, Read Many - Incorrectly. Google is his enemy because it exposes his misunderstanding.

For example, some time back I described Amazon.com as "unprofitable" based on its reports in Yahoo. Mr. Anderson equated "unprofitable" with "bankrupt" and has repeatedly posted that I called Amazon "bankrupt", even though "unprofitable" and "bankrupt" are not the same thing. Will Mr. Anderson recant his error? Of course not.

Your description of State Dept. comms in G-B was perfectly clear the first time, and is another example of Mr. Anderson's "WORMI" memory.

Mr. Anderson's argument boils down to: Someone else told a fishy story,
therefore YOU cannot be telling the truth.

It's similar to the idea that since someone else named Jim disagreed with Mr.
Anderson and called him "Lennie", he is somehow authorized to call me "Jimmie"
>

Thank you. Mr. Baxter is a true friend of all in hobby radio. Not just hams. The SoCal Good Buddies have already nominated Glenn Baxter, K1MAN, P.E., for the Radio Amateur Of The Year Award. We will now also nominate him for the CQ award.

What you say is 100% correct as far as you go. But you fail to mention the remainder of the FCC administrative process that permits a ham or CB operator to appeal the decision of an Administrative Law Judge to the entire FCC and then to the federal courts up to and including the Supreme Court and continue to operate a CB or ham radio until all appeals are done.

Maybe I'm being cynical, but I have to vent...

On Saturday, there were seven kids killed in an avalanche in Canada. Becasue of the Columbia tragedy, this story was buried in the back pages of most newspapers, and received very little air time by broadcast media. Why are the astronauts deaths more worthy of attention than the kids who were killed? Neither group went on their journey never expecting to return, but if you think about, that's a risk every one of takes every time we get into a car, onto an airplane, etc. Why is one death or deaths worthy of so much attention, and another isn't?

In an amateur radio group it's nice to KNOW that the other person
responding to posts is a real amateur and not a wanna be. And I'm
not talking about coded vs non-coded hams either.

>

I commented on Dan's Morse code "screw you"
to Dean Authur's comment, nothing else. You
on the other hand called me a lid without knowing
anything about my "on air" operating abilitys.
If you were to have a qso with me on air you
would find out I'm a VERY polite operator and
not a lid at all. If you don't believe me ask Larry
Roll K3LT, we had a very nice qso in 4 different
modes one day. (That is if you can count a long
distance telephone call as a mode :)

This is where a lot of war-story hero's come from...Guys who claim to have done something "special" while in the Armed Forces. They can read about it, envision what they THINK it was like, and then when they are in a social setting where they THINK no one will know better, they can enthrall the unwitting with thier stories of rear area heroism.

Mr. Anderson knows tons-and-tons of what books TELL him what he thinks he SHOULD know, and then the stories get twisted here.

And not just about rear area radio...His obvious errors in here IRT Amateur Radio are case-in-point almost every day.

>>Wrong again, Bucko. It is not only serious to reveal just information

"Some don't realize why their deaths in particular have such a great
magnitude on society. Sure hundreds of others will die today and any
other day. But those that lost their lives on that shuttle lead lives
dedicated to knowledge and bettering humanity as a whole. So I guess you
could say they died for their country, you could also say they died for
their world. To think otherwise, as far as I've thought it through,
would be plain ignorance."

While the deaths of the children you refer to is tragic, and I can
certainly feel for their families, I hardly think you can equate going
into space and coming back at the same risk level as going skiing,
getting into a car, onto an airplane, etc... Space flight is extremely
complex and dangerous, and as the above poster pointed out, these people
do this in the pursuit of knowledge, not for a weekend holiday.

Thats the way it works in todays American society. Any death is a shame, or course.

But the Shuttle was much more visible of a tragedy.

In the same way we have several miners killed in Alabama digging coal during the 9/11 events. Ever hear of it? See what I mean. Whatever sells and thats the way it is.

Hi...

No one life is worth more then the next. And if there is judgement to be done, it's up to the "Great Architect Of The Universe".

Simple answer to your question, though. It's a matter of the facts of modern mass media.

The shuttle program, or any other space program is an "out in front media sweet heart". When milestones like the first man in space, or the first man to set foot on the moon are achieved, the world as a whole is enriched and inspired by it. We celebrate together and all share in the achievement together because we all see it together via the mass media. The same goes for mourning a tragic failure.

It's a simple matter of coverage.

For all other great accomplishments and tragic failures that we know of personally, by aren't publicized, it's up to the individual or individuals that witness them to celebrate or mourn them in our own thoughts and circles.

Because this is a short-wave ng, I've got to tie this up to short-wave listening and say that because of short-wave, I have been made aware of news, thoughts and ideas that I wouldn't have been exposed to without it.

Respectfully,

Michael

1) The "seven kids killed in an avalanche in Canada" probably were not as well known as the astronauts,

2) They didn't affect the American "image" as much,

3) They don't affect the American (NASA) budget as much.

4) There was nothing to cover up and nothing to gain by advertising the deaths of the skiers.

The crash of the shuttle has galvanized, for now, the American people and Dubya's ratings and is supposed to make us all join hands and forces and go gung-ho after ol' Saddam!

We have laser weapons that could bring the shuttle down and needed testing - to prove it! Every time we develop a new weapon we have to "test" it on something.

We probably also have technology far superior to the shuttle but the people would find it far too expensive to add to the budget -- unless we had such an event as the disintegration of the shuttle to galvanize the people together, reinforce our commitment to the space program and soften the hearts of the American people toward the new budget -- to come soon.

Look for more catastrophic events all through this year and into the next year or two -- until we surrender every right we have to the globalists!

Sit back. Drink your fluoridated water. Have another beer, and some potato chips while you're at it. Watch another sitcom that's so funny they have to tell you when to laugh. Turn in all your guns, if you have any. Believe every politician - and most of the preachers. Buy some more stocks - your commissioned brokers wouldn't lie to you, would they? For goodness sakes don't get any real money -- paper is the rage, these days! Don't listen to those nuts on shortwave -- the controlled media is all you need! -- NOT!

Thanks. I've been considering venting a little too! Wheeeh! ;-)

Surely the death of those chilren is very tragic as all deaths are.

If you can't figure out why the shuttle story is a bigger story then
something is wrong with you. I'd imagine that the local papers where the
children are from had it front page though. That is what's important. IF
they didn't then your issue is with those newspapers.

The shuttle tragedy is a *national* tragedy. Really a multi-national
tragedy considering that 2 other countries lost one of their best as well.

I'm sorry to hear about those children however,as I'm sure everyone here
is. Your post is the first I've heard about it. My condolences to thier
families from N.Y. State.

I'm sure that you believe in your heart of hearts, that just any old
"commander" will do. I'm sure you believe in your heart of hearts, that
the sum total of information about operating from Somalia is the
information contained on the ARRL's web site. I'm sure you believe in
your heart of hearts, that the T2FD and B&W folded dipole are fine
antennas. I can't come up with another way to explain these things.

If that's a by-product, why not?

When I reported to the San Francisco FCC office in 1967 I was amazed to find out that the intercom by which the telephone receptionist passed calls to staff members was an ancient Morse key and an equally ancient one-tube oscillator feeding several speakers around the suite.

"How medieval" I thought. After using it for several years, it almost broke my heart to find out that the Type 42 (or was it 43) tube used in the oscillator was no longer available at retail and when it finally burned out in the mid-1970s we went to a somewhat more conventional "overhead" voice paging system. Sometimes I missed feeling that old B-battery across the binding posts.... <ggg>

You may have worked for government contractors for most of your career, Len, but except for your hitch in the Army, how much time have you worked for "THE government" directly? Certainly in the non-military end of "The Government" one learms that if the toothpick is reusable, it gets reused until it is no longer usable, no matter how antiquated it becomes or how many mouths it passes through.

I think it is a Brian-Len thing. Brian, who likes to read between the
lines, believes that you have stated that HE has little or no
experience, little or know knowledge or little or no skill.

I generally have low noise here but I really having no way of knowing if
I could have heard AH3D on a T2FD without a preamp. I would not have
wanted to place my eggs in that basket given that it was the next to
last night of operation for the Johnston Island ops. I like to put my
RF up in the air through use of the most efficient antenna I can install
than to use it warming up a resistor.

Hi guys and gals,

Well, I'm finally all rigged up and despite my really crappy antenna situation (triband trap dipole about 10 ft. off the ground), I was able to talk with my first HF contacts tonight, a guy in Orlando, Florida and a guy in Montana. I have a new Icom IC-718, which is a very nice radio and I got it very cheap. I guess it's not so bad after all, the antenna I mean. I borrowed it from a friend when I discovered that the Hy-Gain vertical strapped to my deck ain't gonna work without a ground or counterpoise. Better than nothing!

Are there any good 20 meter nets that you know of?

Jackie

There were probably more people killed in auto accidents on
Saturday than on the shuttle and by avalanches combined. I would
also wager more died in other accidents as well. You want a
detailed news report on all those as well? What areas of science
were those kids advancing besides their own pleasure of skiing?
Yes, their deaths were just as tragic, even more so to their
families, but the space program is quite a bit more higher profile
than someone skiing in the back country.

>if you think about, that's a risk every one of takes every time we get into
>a car, onto an airplane, etc. Why is one death or deaths worthy of so much
>attention, and another isn't?

Believe it or not, you actually have a good point here. I have also been been
in awe of the way people are going out of their way to make public displays
of largely self-serving "grief" over the loss of the Columbia astronauts. Many
times their number were killed on the nations highways that very same day,
in addition to those killed in the Canadian avalanche.

The Space Shuttle Columbia crew were people who were engaged in an
activity they knew was inherently risky. The risks were, of course, acceptably
low, and worth taking -- but the fact that they ended up having their card
drawn off the bottom of the deck doesn't make "heroes" out of them. This is
no worse a "tragedy" than the crash of a business jet with a pilot, co-pilot,
and five executives of a large corporation -- but we're making an overblown
emotional event out of it on an international scale nevertheless. Yes, they
took these risks in the interest of furthering science for the betterment of
mankind -- but they were each due to benefit from having had this
great opportunity with a lifetime of profitable speechmaking, book writing,
and other ways to make a fortune as a result.

Yes, this event is tragic. The tragedy includes not only the loss of seven
highly trained, irreplaceable astronauts, but in the loss of the progress the
space program will suffer as a result of all of the investigations and after-
action second guessing which will follow -- largely driven by power-hungry
politicians with an anti-NASA agenda.

What we should be doing is picking up the pieces, giving whatever remains
of the astronauts which can be blotted up and DNA identified a dignified
burial with full military or civilian honors, then get right back in one of
our
three remaining Space Shuttles and blast off! Along the way, we should
spend a few bucks to invent a way to inspect and repair the tiles while
in space -- maybe plan on leaving a damaged Space Shuttle double-
parked with the ISS while the repairs are being planned/accomplished,

and using a low-cost, one-shot capsule to recover the stranded crew.

If we're going to treat this accident as another reason to break out the national crying towel, then they'd damn well better start televising each and every single Space Shuttle launch/landing again, on all TV and cable channels, complete with Jules Bergman scientific reporting, just like they used to in the good old days when astronauts WERE Real Heroes (tm). And they'd better show the re-runs for a coupla days so everyone gets a chance to see it! If the space program is special enough for us to force us to endure the gauche scene of politicians, celebrities, and everyone else who can get their face in front of a camera crying crocodile tears for people they, in some cases, were barely aware of the day before, just because they were astronauts, then let's make being an astronaut just as special as it used to be in the REAL pioneering days of the space program!

If Baxter is the future of ham radio, then ham radio has no
future. Wonder why I would expect you to like Baxter? Two of a
kind I guess. You, blusterous Baxter, and Lloyd should make a
great threesome.

If the ARRL even REMOTLY offers ANY SUPPORT
WHATSOEVER to this Orwellian proposal by K8AD
than it will signal the **DEATH KNELL** for ARRL.

Anyone (...and I mean anyone) who would lend their
support to this insane proposal is aiding totalitarian
style controls to the private ownership of a radio
transmitter.

I wonder if K8AD went to the "Soviet Gulag School" of
Ham Radio? The Govt. or anyone else has no damm
business AT ALL knowing what makes and models of radios
I may purchase or own G-DDAMMIT!

What the frig? Are we to now have HANDGUN STYLE
Registration Requirements for Ham Radio and CB Equipment???

IF THE ARRL GOES ALONG WITH THIS PROPOSAL -
IN ANY CAPACITY WHATSOEVER, YOU WILL SEE THE
BIGGEST ABANDONMENT OF ARRL MEMBERSHIP
SINCE THE INCENTIVE LICENSING DISASTER OF
THE 60's and 70's.

-----> Do not support or touch this proposal W1AW - unless you
want to go the way of the Spark Transmitter and Rotary Dial Telephone.

If you're going to discount antenna theory material less than a few
years old, you'll have to abandon the Yagi, the cubical quad, the
windom, the log periodic and much more. You'd be left with not much
more than a guy forced to ask questions about how to build an end fed
antenna for 5 MHz.

> The interesting thing is that there were accidental discoveries in
> applied radio, but since the T2FD was engineered to be tilted, no
> other contemporary deployment of the antenna can be called a T2FD.

A delta loop is simply a full wave loop design. It wasn't designed
until 1968 by Harry Habig K8ANV. It had the same basic operating
characteristics as the cubical quad. It isn't called a cubical quad.

Good luck on your search for knowledge.

Why not try writing English as most folks comprehend it?

Y'know, Brian--you could be right. There might be contemporary uses for
the T2FD. For example, it might be just the ticket for high power
spread spectrum.
Your use of high power could overcome the loss of the big honkin'
resistor. I guess the other guy would need high power too, reciprocity
considered.

Both tradgedies made the front page of Monday's Edmonton Journal. The reason being that the kids were from a private school in Alberta and the shuttle, of course, being a high-profile incidence. The paper did a good job of giving equal coverage to both.

Yes, but the challenge was to impress a non-Ham.

So, invite a non-Ham to a Hamfest and/or club meeting (preferably Hamfest).
Then, lets see if the non-Ham is impressed.

In order to be not biased, the non-Ham must not be related to a Ham or have
longtime association with a Ham.

I'm up to the challenge if anyone else is.
I will invite a non-Ham to a Hamfest. Anyone else?

Was polishing motorcycle in driveway one day. Car drives up and couple get out. Look at motorcycle then fellow asks if peculiar antenna on roof is mine. I say "Yes." Out comes papers. "You have been served." Went to court with Order for judge to sign requiring Plaintiff to reimburse me for time off and costs of researching law at law library plus travel and meals and listed miscellaneous expenses. Judge signed, they balked. I said, "Pay up or I freeze all accounts and assets." The rep of company asked judge if I could do that. Judge answered in the affirmative. They paid.

It's so much fun when you know the law and they don't!

1574. Re: ARS License Numbers (quantity vs quality)

Date: 2003-02-04 05:02:36 UTC
From: vshah101@aol.com
Message-ID: <20030204000236.04497.00000014@mb-fx.aol.com>
Source record: 60657

What is this obsession with license numbers?

Don't forget quality is as important as quantity.

Tied to this is the elimination of tying the Morse code requirement to the license class.(*1) With the elimination of this irrelevant metric, the hobby will change. Then, pride in the license and achievement will follow.

Morse code does not necessarily lead to a dumbing down of the license - it is merely a shift in emphasis. However, some do use Morse code as a substitute for "real" achievement, which dumbs down the hobby.

The narrow focus on Morse and antennas is not bad, but the expansion of all aspects will be good for the hobby.

(*1) Please note: I am biased, I will admit it. I will not use rationalizations as the pro-coders do and pretend there is no agenda behind it. My agenda is to expand the technical aspects: homebrewing, antenna setups, and so on. So, you know where I'm coming from.

Yeah... thats in the plans.... living at where I am now to save money
towards the house I am hopefully gonna buy in 2005 and have already saved up
almost $4000 in the past 2.5 years for the down payment. Guess this is a
worthwile reason to "suffer." :)

I can however work mobile and slowly building that as my "station."

73's,

That was not my intention. I have no idea hw much experience, knowledge or
skill he has with HF antennas.
>
>> An inexperienced ham, who had not used an efficient HF dipole, might think
>> the
>> T2FD/WBFD was not much different in efficiency.

Is the above untrue? I don't see how it's an insult. I don't have much
experience playing jazz guitar, so I might think there's little difference
between the various guitars used by jazz musicians.
>>
>> A ham lacking in knowledge might not understand how the T2FD/WBFD
>>obtains
>>its
>> broadband characteristics through the use of resistive loading, which

Is the above untrue? I don't see how it's an insult. I don't have much
knowledge of ancient Chinese pottery.
>
>> A ham lacking in skill might want to avoid having to adjust a tuner.

Is the above untrue? I don't see how it's an insult. I lack skill in flying
aircraft, so I might want to start out with one that required less skill than,
say, a P-51 Mustang.

Some folks see insults where there are only plain, simple facts.
>>
>> A simple dipole that is the same size as a WBFD, fed with low loss parallel
>> line and matched with a suitable a tuner will have practically identical
>> patterns but much higher efficiency than a WBFD. Such a dipole is lighter
>>and
>> mechanically simpler, and when all costs are considered, is no more
>>expensive.

Note the following part from the above: "practically identical patterns but
much higher efficiency than a WBFD" So whether it's for NVIS or DX work, or
anything in between, pattern is NOT a reason to use a WBFD rather than a dipole
of equal size.

Just a plain, simple fact.

Yup. Look up the efficiency of a WBFD at 2 MHz compared to a dipole of equal
size. It's not a pretty sight.

And such a rule simply won't work. External RF power amplifiers for the 27 MHz range have been heavily regulated for 25 years now. Has that stopped their illegal manufacture, sale or use? Not that I can see. All the proposed rule will do is add an unnecessary level of paperwork and regulation to law-abiding radio owners while doing little or nothing to stop violators.

>IF THE ARRL GOES ALONG WITH THIS PROPOSAL -

ARRL is actually doing ham radio a great service by publishing this proposal so that we know it's out there and can oppose it by comments to the FCC and ARRL.

Did you know about the proposal before you got the ARRL letter? I didn't.

Have YOU commented to the FCC? It's really easy using ECFS.

1583. Re: ARS License Numbers (quantity vs quality)

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-04 11:36:18 UTC
From: n2ey@aol.com
Message-ID: <20030204063618.05048.00000445@mb-cs.aol.com>
Source record: 60665

In article <20030204000236.04497.00000014@mb-fx.aol.com>, vshah101@aol.com (Vshah101) writes:

>What is this obsession with license numbers?

It's not an obsession - just a small bit of service to the ARS. By posting the current license numbers every two weeks, it will be possible to document the growth or decline of the ARS in the USA for a long as someone maintains Usenet archives.

>Don't forget quality is as important as quantity.

Many of us procode- and procodetest folks have been saying that for years.

One of the reasons often given for restructuring and code test reduction/elimination has been that it would help the ARS grow. Reduction to the minimum test that reasonably meets the treaty requirement doesn;t seem to have had much effect on growth in the past 32 months. Perhaps total code test elimination will help growth - or maybe it won't.
>
>Tied to this is the elimination of tying the Morse code requirement to the
>license class.(*1)

Vipul, do you understand the meaning of the words "treaty requirement"?

Do you understand what "S25.5" means?

>With the elimination of this irrelevant metric,

It's not irrelevant. If hams did not use Morse code, it would be irrelevant.

> the hobby
>will change.

Maybe. Reduction from 3 code tests to 1 hasn't caused much change in the past 32 months except for large numbers of already-licensed hams getting higher class licenses. It has not caused lots of new hams, nor a surge in homebrewing, technical innovation, etc.

>Then, pride in the license and achievement will follow.

Why isn't that happening now?
>
>Morse code does not necessarily lead to a dumbing down of the license - it is
>merely a shift in emphasis. However, some do use Morse code as a substitute
>for
>"real" achievement, which dumbs down the hobby.

Let's see if I have this straight....

You're saying that if the remaining 5 wpm code test is eliminated, and no other changes are made, lots of hams will suddenly start homebrewing, experimenting and doing things they aren't doing now. All because of a 5 wpm code receiving test.
>
>The narrow focus on Morse and antennas is not bad, but the expansion of all
>aspects will be good for the hobby.

See above.
>
>---
>(*1) Please note: I am biased, I will admit it.

Good.

> I will not use
>rationalizations
>as the pro-coders do and pretend there is no agenda behind it.

What rationilizations?

>My agenda is
>to
>expand the technical aspects: homebrewing, antenna setups, and so on. So, you
>know where I'm coming from.

And how, exactly, will eliminating the 5 wpm code test do that?

Do you understand why FCC can't just drop the code test right now?

--

Suppose the treaty changes (very likely) and the code test is dropped (also very likely). But suppose amateur radio doesn't change the way Vipul wants. Will he then say he was wrong and ask for the code test to be put back? Very unlikely.

Way cool and congrats, Jackie!

Particulalry impressive considering the antenna went up during a Minnesota
winter.

See you on the bands!

>The shuttle program, or any other space program is an "out in front media
>sweet heart".

I beg to mildly disagree for two reasons.

First of all is how much "media coverage" did the LAUNCH of the Columbia and it's subsequent mission get? The answer is, of course, "not much". They COULD have spent a lot of time discussing the scientific mission of STS-107 (and hence important to all those starving millions the liberals are quick to remind us of when the "cost" of the space program is once again brought into question.)

They didn't.

Secondly, why doesn't "the media" spend any significant time showing Americans (and subsequently the whole world) just how much thier lives ARE impacted by the space program? People shouldn't have to go to the Discovery or TLC channels to see what's being done for them. Too many people still think the space program is there JUST to show that IT (flying in space) can be done.

They don't.

>It's a simple matter of coverage.

Change "coverage" to "sensationalism" and I'll agree wholeheartedly.

>For all other great accomplishments and tragic failures that we know of
>personally, by aren't publicized, it's up to the individual or individuals
>that witness them to celebrate or mourn them in our own thoughts and
>circles.

I know it's morbid to say "only" when we are discussing people's deaths, but the truth is there have only been 17 deaths in America's space program since 1968. That averages out to less than two people a year.

Now, consider that the benefits of the space program touch millions of people every day. In my case I am an ER nurse, and I know for a fact at least a dozen items I use on a near-daily basis are spin-offs of or were directly developed for the space program. Now multiply my experiences by 30,000 (just a rough number of ER nurses) and it's easy to see how it truly DOES benefit millions.

The medium we share these comments on...while not directly created for the space program, was certainly a significant factor in it's proliferation.

Now we're up to billions.

It's astounding.

My prayers to their Families, Godspeed to NASA in finding out what happened, and time to go forward.

I maintain that abuse is very rare among hams using CW in the
CW/digital subbands. Such abuse happens far more often on voice modes.
> >

That I can agree on.

> > But CW ops can be just as rude as any SSB user.

In theory, yes. In practice, no.
> >
> > Example one: Frequency grabbing.
> >
> > You'll be sitting on a relatively clear frequency and will call a
> > general CQ.

Hold on - "relatively clear frequency"? What's that mean? Nobody
within 10 Hz, 100 Hz, 1000 Hz?

> > At that point, a contester comes back to you and asks you
> > for confirmation and an exchange of RST reports. So you give him what
> > he asked for, turn it back over to him, and then he starts to call "CQ
> > contest" without ever skipping a beat. You have just been quite
> > rudely shoved off frequency by a CW lid.

What contest requires RST? Not SS, not FD, not the DX tests I know of.

Contest exchanges are quick and short. If you wait for more than a few
seconds after a QSO the other folks think you moved and they pounce on
the freq. CW contest ops use sharp filters, so to them a few hundred
unoccupied Hz is a clear spot. To someone trying to work CW with an
SSB filter, it sounds like a mess o' QRM.
> >
> > It happens all the time.

When was the last time it happened to you?

> > When it happens to some people, they don't
> > move on. A jamming contest ensues as both stations call CQ on top of
> > one another.

See above. How wide was your filter when this allegedly happened to
you?
> >
> > Example two: The other station goes deaf.

> >
> > Some operators want to know your QTH and their RST report, and once
> > they get that information, they simply move on to another QSO without
> > ever saying 73.

In 35+ years of HF CW ragchewing, this has never happened to me. A few
folks want fast QSOs, others want nice 'chews, but they all say 73 and
sign off rather than just disappearing.

> > As a result, people play little coy games and don't
> > give out a signal report until the other guy has been forced to listen

Never had that happen to me. Sorry.

> > Another sizeable minority will start
> > telling you that you're fading away in order to escape the QSO.

How do you know you're not?
> >
> > Bottom line: Too many people don't really want to get into rag chew on
> > CW, and their QSOs are consequently predictable and boring.

Hmmm - could it be that you don't make the conversation interesting?
> >
> > Example three: The ego dominance battle.
> >
> > A persistent subgroup of CW operators generally hang out in a de facto
> > net, using break-in transmissions and automatic keyers of some kind.

Is that bad? Same sort of thing is common on 'phone.

But I have rarely heard this on CW. The CW nets I've been part of have
been very formal.

> > These guys get strange when a newcomer arrives, and keep on bumping

Whoa, hold on a sec.

Some hams who obviously know each other are having a QSO and you just
butt in without invitation? Would you do that on HF 'phone?
> >

> > All of that having been said, the rude operators are in the minority,
> > and either end of the band can provide hours of enjoyable QSOs with
> > the many good operators that can be found there.

And those are the ones to focus on.

> > It's just the notion
> > that CW ops are "special" that pulls my chain.

When's the last time FCC cited a ham using CW in the CW bands for a
violation involving jamming, obscenity/profanity, etc.? (Yes, folks,
FCC CAN copy what's being sent on CW.)
> >
> > And before any of you "eleet" coders start your testosterone-speak of

When was that? If you don't use the mode these days, how can you tell
what the behavior today is like?
> >
> > Unlike some others, I don't think that CW ability conferred any
> > special virtue upon me.

That's fine.

> > Consequently I don't want to force it on
> > other licensees.

That's fine, too.

Others have different opinions.

> > That is, I'm not at all impressed by code skills,
> > but I am impressed by technical skills.

Did technical skills confer special virtue on anyone?
> >
> > But that's a different subject.

Not really. Some of the worst (and best) stuff I've heard on the ham
bands has come from folks who were technically very skilled. But why
should technical knowledge beyond the level needed to understand and
comply with the rules & regs be "forced on other licensees"?

Baxter is NOT transmitting bulletins. He is sending 1 1/2 hours of taped talk show and copied stuff from RAIN and the ARRL. Never intended for HF use.

He is also in violation of the 'control operator' rules. Plus countless other alleged offenses.

Oh and don't pay any attention to Llllooooyyydd he supports all idiotic causes. You know like bro Stair, BARF, etc.

He is right about how 'some' CW operaters act. Everything he said I have
seen happen. Well actually heard happen.

I believe his point would be that its not the mode that makes a lid...its
the person. And he is right.

Tubes are also used in many if not most HF power amplifiers
home-brewed by hams. More watts-per-dollar, particularly if you can
get some of the parts at discount prices.

But wait, Dave...

If most HF RF power amplifiers currently produced and sold for amateur
radio use tubes, how can they, or the technology, be "obsolete"?

Does anyone make "solid state" microwave ovens without a tube inside?

> > Grass.

Ah - so QST must emulate commercial broadcast practice?

Besides, the question was about listening to oldies and classical. Why
isn't listening to, and broadcasting, such stuff "clinging to the
past"?
> >
> > Vintage airplane have their own format.

For several years I subscribed to "Air And Space". Lots of vintage
aircraft and spacecraft in there, ranging from Wright Brothers stuff
to what it would take to go to Mars - and beyond.

Vintage aircraft use the same airspace and rules as current
production.

Besides, the question was about flying vintage aircraft. Why isn't
flying a vintage airplane "clinging to the past"?

> > Antique cars have their own format, and its not Motor Trend.

The question was about driving them.

Seems to me this is all about what some folks don't want to see in
QST.

Interesting. Perhaps a quote from a long-time poster to this newsgroup
would be appropriate at this point.

"You cannot answer a question with another question."

Guess who wrote that?

Here's the google quote:

>
> On that I agree.

Some in here cannot abide any sort of commercial ties so
any sort of commercial license has "no meaning" to
amateur activities, therefore amateurism is "superior" to
anything commercial, professional, etc. :-)

No matter that once there were classes of radiotelephone
licenses whose examinations were given in real regional
FCC field offices by FCC personnel, some feel that the
"only worth" in any radio licensing is trudging barefoot
through the snow uphill both ways, laboring intensely at
the test session while full of worry, anxiety, and near-
mental-trauma that they would fail the virtual Nobel award
signified by The Ticket.

Some even go so far as to redefine "interest" as demanding
one Take The Test! :-) This signifies "commitment and
dedication to the amateur community." They virtually
"enlisted in the service" thereby becoming "heroes of the
something or other" and thus entitled, like nobility, to the
utmost respect for their supreme commitment and dedication.

All that for a hobby activity. Oh, my... :-)

>>I'm not aware of anything that specifically needs it.
>
> It's required for operation and servicing/adjustment of certain
> classes of maritime and aviation stations. See Parts 80 and 87 of

A legislative sort of thing. Human-made for aviation and maritime
services, not necessary for safety of life at sea nor in the air.

>>It's just an optional qualification for BC engineers.
>

> Not any more. The Society of Broadcast Engineers has their (our)
> own Certifcation program, as does several organizations dealing with

Cannot be! Isn't the amateur radio license test the absolute
toughest of all?

> There are no qualifications whatsoever for hiring BC engineers - the
> B/C licensee can, and in some cases has, hire Joe Baboon to do the
> job. Reputable broadcasters will insist on SBE Certification or
> equivalent proven experience.

"Joe Baboon" can get an amateur license. A few of them have
and have appeared in here. :-)

Those same "reputable broadcasters" had been stuck with some
legislative paperwork regulations that required outside PEs to do
carrier frequency measurements to required accuracies, LESS
accuracy than required by routine engineering measurements
done in labs by non-PE engineers. The consultants have
"certification," that magic wand label signifying expertise.

Amateurs in here lately have been in a "spec fight" on antennas
where they use only the words of others as "measurement"
tools, demanding that only certain types of antennas are
acceptible. Off-hand, I'd say those are wonderful examples of
"baboon-ism." :-)

>>PS: I have a Bachelor's degree in EE, and have worked in jobs related to
>>RF, so I'm not just saying I could pass it on the strength of my Amateur
>>Extra licence, although IMHO most Extras could get their GROL, if they
>>wanted to be BC engineers, or just to show off! (And many do. That is, get
>>it to show off!).
>
> Broadcast material is no longer on the GROL exam, at least for the
> last 10 years or so since the FCC privatized that exam process
> and rewrote the exams.

Most in here don't seem to be aware that ALL radio operator
license examinations are privatized. The acronym "COLEM"
to them is a nonsense word on par with "Gollem." :-)

What is absolutely Most Important to too many amateurs is
that one piece of printed paper that gives them title, status,
nobility, and intrinsic self-importance. To them it isn't a
legislative gateway to an enjoyable hobby, they've become
a SOMEBODY "superior" to ordinary folks.

It's like a "Lord of the Rings" thing, the certificate replacing
the Ring. A fantasy world of imagination, glory, honor, and
conflict where They must triumph always. It isn't fun or

recreation to them, but a virtual Triumph of good v. evil
where they self-define what is "good" and what is "evil." :-)

Makes for some comfortable billing revenue for a few
communication attorneys though, so it can't be all bad...

I'd like to see a valid record of Miccolis' experience in
actually measuring antenna gains...or even an engineering
analysis of such gains (he IS a BSEE he say, gave "talks
to industry" too, but I dunno on what...).

>> >I've never had use for an antenna which requires a linear amp to break
>> >even on gain when transmitting.
>>
>> Nor I!
>>
>> >I have used and do use loss antennas

>> >a preamp to bring up the desired signal.
>>
>> Yep. Which brings up a question - could you have even heard AH3D on 160 if
>> you'd had a T2FD for receiving? Unlike a directional antenna like a loop,
the
>> T2FD would pick up noise from all directions.
>>
>> 73 de Jim, N2EY
>
>Your and Dave's example is absurd. The T2FD supports local/regional
>communications and frequency switching. Its not a DX antenna. Get
>over it.

"Amateur radio is all about working DX on HF with CW."

That's a mantra those two sing at the drop of a dipole.
Off key, too, more's the pity.

In antenna analysis, there's the 'method of moments.' With
those two it's the "method OF the moment" in here... :-)

1610. Re: Lennie, You're OUTTED, Now Get Over It

<snip of long jeremiad of rationalization by Heil>

>I'll comment again, Dave.

No problem. You can't talk direct to me. :-)

>It's clear to me and to everyone else (except Mr. Anderson) what was going on
>in G-B (my abbreviation) back when you were there: State Department
>communications consisted of various systems that happened to be in place and
>which did the job. The fact that more modern systems were available elsewhere
>did not mean they existed everywhere. Particularly at the time you were in
>G-B.

Oh, WOW. Rev. Jimmie done TOLD (someone)!

Rev. Jimmie (N2EY) was never in government employ.
Rev. Jimmie (N2EY) was never involved in government or
military radio communications.
It's unknown whether or not Rev. Jimmie Callsign ever
knew any countries in middle Africa or anything else
except morsemanship and the mantra "CW gets
through when nothing else will."

>The availability of "surplus" TTY machines and other equipment in the USA
means
>nothing if that equipment and the necessary support can't be transported to
>where it is wanted - in this case, G-B. So the old CW and 75 baud TTY
>equipment that was in place and working did the job.

Rev. Jimmie seems to think that State Department of the US
of A uses surplus communications equipment. :-)

Rev. Jimmie KNOWS that the described State radio circuits
"did the job," not on technical terms but on the WORD of
another morseman. ["he's a 1x2 extra so he's okay"...chorus
of a pet M. Python skit...:-)]

>Doesn't take a textbook to figure out that under certain conditions Morse/CW
>would sometimes get through when the other available modes using the available
>equipment would not get through. So in those situations Morse/CW was used -
>mostly to figure out how to get the TTY systems functioning again (chnage
>frequency, try again at a different time, etc.)

Bullshit squared. If OOK CW was "the only mode that would work
for 'coordination' then it should have been used for regular traffic."
If regular traffic was possible by TTY then TTY should have been
used for 'coordination.'

Good grief, Charlie Brown...that wasn't rocket science in the 1950s
and the US military managed to get through in nearly all parts of
the world then...including equatorial regions. No "textbook"
needed, just a check of date, time, sunspot cycle, and published
charts of probable MUFs and other propagation things ALREADY
KNOWN. [some were laminated in plastic and hanging at military
control centers in the 1950s] Ionosondes were coming out and
some were used in the 1950s...by the 1980s (three decades later
for the deficient-in-simple-arithmetic) there were enough to confirm
the old charts. Was the US Department of State so damn
stingy in their budgets then that they couldn't afford copies of
information? Rev. Jimmie, YOU answer...you have extensive
experience in government comms to KNOW, don't you?

>Here's another plain, simple fact:

Error! Error! Danger, Will Robinson! :-)

Jimmie Miccolis posts a PERSONAL OPINION.

He no like somebody, he try for puerile-ism in masquerading
personal opinion for "fact." That "plain simple fact" is just
a disguised personal nastygram he's trying to send.

>For example, some time back I described Amazon.com as "unprofitable" based on
>its reports in Yahoo. Mr. Anderson equated "unprofitable" with "bankrupt" and
>has repeatedly posted that I called Amazon "bankrupt", even though
>"unprofitable" and "bankrupt" are not the same thing. Will Mr. Anderson recant
>his error? Of course not.

Will Jimmie Miccolis ever label things correctly or acknowledge
his information source for his first comment on the non-profit
of amazon.com?

Tune in tomorrow for the next episode in this on-going soap
opera of outraged egos with callsigns demanding their honor
to be avenged!

This sort of misdirection happens often when ARRL Believers
see ARRL sullied in any way...such as no shipping charges
at amazon.com for $25 or more to buy ARRL publications
while ARRL charged extra for shipping the SAME items. :-)

Rev. Jimmie hasn't yet acknowledged newspaper business
news nationwide of nearly two weeks ago. He may be
waiting for Google to make it available (Jimmie may live in
there...who knows?). :-)

>Your description of State Dept. comms in G-B was perfectly clear the first
>time, and is another example of Mr. Anderson's "WORMI" memory.

Whatever you say, Ourobouros, you turned there... :-)

>If it's not in the books he read, it can't have happened.

If NOBODY else did it but Heil, then EVERYBODY else
is "wrong." :-)

>Mr. Anderson does not like the fact that he does not have the necessary "need
>to know".

Not a problem here, Rev. Jimmie. I've been ON a "need to
know" and OFF a "need to know" for as long as I've had
a security clearance...like 30+ years worth.

Heil can use whatever statements he used in rationalizing
what he wrote in here. If a "need to know" lends an aura of
"mystery" to his writings, it's an UNCONFIRMABLE
statement. Fish story, really. It's like the "my son was
behind Iraqi lines [in Gulf War] sending intel by CW"
nonsense posted by another.

>State Dept. is not part of the Navy, last time I checked.

Rev. Jimmie had to "check?!?" :-)

>Google is his enemy, Dave.

Google (was DejaNews) may be a nice place to visit.
Unlike Rev. Jimmie, I don't want to live there... :-)

So, Rev. Jimmie wants to keep on and keep on and
keep on with five-year-old squabbles to defend his
honor and righteousness? No problem here. The
good Reverend can grab his time machine and go
back to his beloved past.

Meanwhile, I'll just wait for Heil to acknowledge he
can't do simple arithmetic. Hello? 7 x 24 = 168.
It isn't "148." A recent gaffe. It's probably in Google
now, though. Go, go, go Google! :-)

>Mr. Anderson's argument boils down to: Someone else told a fishy story,
>therefore YOU cannot be telling the truth.

"Fish story" is a colloquial phrase meaning something
told that appears an exaggeration or an untruth. I say
Heil made up a story as rationalization for his previous
statement about "using CW for 'coordination.'"

The pedantic parson should correct himself. I never said
"fishy story." I said SNOW JOB and FISH STORY.

Pedantry is slipping with Rev. Jimmie.

>It's similar to the idea that since someone else named Jim disagreed with Mr.
>Anderson and called him "Lennie", he is somehow authorized to call me

>"Jimmie"

Awwwww...poor baby. Should we all salute and call you sir?

No problem, sirce. [the siren sounded]

>Won't do any good. Google is his enemy.

No, just PCTAs who think they are hotshots in radio comms
because they've had fancy titles and credentials.

>>If you hadn't been such a toad, I might have told you. This isn't a
>>case where I can't tell you. This is one of those where I won't tell
>>you.
>
>Would probably just be misunderstood anyway.

Tsk, tsk, tsk. This isn't a case of Heil "not telling," this was
a case of Heil making up a story and hiding behind some
"need to know" bullshit.

HF radio propagation has been known fairly well since before
WW2 and was better known after WW2, several decades
before the 1980s and the celebrated case of "CW for
'coordination' because nothing else could get through."
[PCTA snow job to attempt proving some CW worth back
before NPRM 98-143 was released]

Heil has yet to prove anything other than attempting to hide
behind some State protocol/procedure bullshit of "need to
know." HF propagation is NOT some government secret.
It wasn't secret in the 1950s and it wasn't classified as a
security thing after the 1950s.

>>There is no obligation on the part of the Department of State to do what
>>other agencies do any more than radio amateurs are obligated to do what
>>military or commercial stations do.
>>
>Says it all.

Doesn't say anything except Heil can't validly rationalize a five-
year-old statement about radio procedures or HF radio
propagation. He uses misdirection and obfuscation to attempt
dodging a question on radio procedure that was different than
any other radio service procedure since before WW2.

Miccolis seems to be "obligated" to support the claims (really
rationalizations) of Heil's because both are PCTAs, both are
1x2 extras, both make false statements and try to weasel out
of them by interpretive rationalizations. :-)

>other contemporary deployment of the antenna can be called a T2FD.

Amateurs are "not supposed to use it" or "it's a loss gain
antenna" the "engineers" in here say...as if any of them
ever made ANY antenna gain measurements in their
lives. They've only been propagating the WORDS of others
and especially the holy words in the pages of QST.

The rationalization (about never doing any hands-on antenna gain measurement) is that "they earned DXCC" or other DX awards and Their antenna "has reach" (OF USN types will say "it has legs" from sea-going parlance). That's not measurement of any kind, just bragging and telling fish stories again.

The same sort of attitude applies to the "need" for morse-manship testing. More fish story telling but this time with They Did It (so everyone else must do it too).

Their "technical expertise" in antenna work as well as "knowledge of theory" comes from memorizing antenna makers' ad flyers. They really don't know feces from boot polish on the real "gain" of their antennas...but everyone MUST obey Their Word.

Those "technical experts" ought to invest in EZNEC from Roy Lewallen or another polished version of the totally-free NEC computer core analysis program. Cebik uses that and a couple other programs for his monthly columns in Antennex.

>That was not my intention. I have no idea hw much experience, knowledge or
>skill he has with HF antennas.

Since when has actual knowledge of anyone stopped Rev.
Jimmie from making uneducated guesses about technical
knowledge of others? He will presuppose anything to make
his message case.

>Is the above untrue? I don't see how it's an insult. I don't have much
>experience playing jazz guitar, so I might think there's little difference
>between the various guitars used by jazz musicians.

Don't music and guitars have their own newsgroups? Go there.

"Jazz guitar?!?" Get "with it," downbeat. :-)

>Is the above untrue? I don't see how it's an insult. I don't have much
>knowledge of ancient Chinese pottery.

Pottery and ceramics is another newsgroup. Go there.

>Is the above untrue? I don't see how it's an insult. I lack skill in flying
>aircraft, so I might want to start out with one that required less skill
>than, say, a P-51 Mustang.

Har!

>Some folks see insults where there are only plain, simple facts.

Yes, Rev. Jimmie comes unglued when FACTS are presented
in front of him in public.

What Rev. Jimmie calls "facts" ("plain, simple facts") are just
his own interpretation and his personal opinion of others.

>Note the following part from the above: "practically identical patterns but
>much higher efficiency than a WBFD" So whether it's for NVIS or DX work, or
>anything in between, pattern is NOT a reason to use a WBFD rather than a
>dipole of equal size.

Ah, a CAUSE CELEBRE' to start another misdirection over
quibbling. Focus on details, forget Biot & Savart or Maxwell,
"curl" up with calculated nastygrams about others' writings
instead of calculus.

>Just a plain, simple fact.

Sigh...

>How far above the noise was he? WVA to Johnston Island is a fur piece on 160.

"Fur pieces" is an INCORRECT measure of distance.

Go thee to a furrier newsgroup, reverend.

>And that's the bottom line!

The "bottom line" is where the "signature" is according to
the reverend. Wrong description.

>Yup. Look up the efficiency of a WBFD at 2 MHz compared to a dipole of equal
>size. It's not a pretty sight.

There is NO amateur band at 2 MHz.

A 234 foot long dipole is NOT a pretty sight in a residential
neighborhood. Go take your 2 MHz dipole out in the
country.

>If most HF RF power amplifiers currently produced and sold for amateur
>radio use tubes, how can they, or the technology, be "obsolete"?
>
>Does anyone make "solid state" microwave ovens without a tube inside?

No...but then consumer electronics microwave ovens are sold at retail prices of $50US each, making a profit for the retailer, the distributer, the manufacturer. Each one has a nice little microcontroller (a specialized microprocessor with some added on-chip circuitry) that controls that RF-generating magnetron.

Have any hams home-brewed a vacuum tube micro-controller to take the place of that integrated circuit? :-)

>Is it "wrong" for ARRL members to express their opinions to Hq? I
>don't think so!

Yes, Reverend Jimmie Callsign absolutely thinks it is WRONG to express negative criticsm of beloved ARRL in here. QED.

>I don't have any problems with "The Doctor" or the vintage articles.

Anything "vintage" is acceptible, sometimes venerated. :-)

>Who gets to define what is "the future"? Does it include homebrewing
>or kitbuilding, or must I buy all my equipment ready-made by
>electropolitically correct manufacturers?

"Electropolitically correct?!?" :-)

Elecraft is electropolitically correct? SGC is electropolitically correct? Ten-Tec is electropolitically correct? :-)

>Perhaps the answer is too embarrassing.

For whom? The questioner? :-)

>Ah - so QST must emulate commercial broadcast practice?
>
>Besides, the question was about listening to oldies and classical. Why
>isn't listening to, and broadcasting, such stuff "clinging to the
>past"?

There's a separate newsgroup for broadcasting and "oldies" (the music term, the oldies in ham radio live here and in

Google).

>For several years I subscribed to "Air And Space". Lots of vintage
>aircraft and spacecraft in there, ranging from Wright Brothers stuff
>to what it would take to go to Mars - and beyond.

Goodie for the Smithsonian, they made a couple bucks
profit from a subscription.

Ever help build an experimental aircraft, Jimmie?

>Vintage aircraft use the same airspace and rules as current
>production.

Careful, pedantic parson. Check FARs before you state
anything more...

>Besides, the question was about flying vintage aircraft. Why isn't
>flying a vintage airplane "clinging to the past"?

Oh? I thought this newsgroup was about AMATEUR RADIO
POLICY. !

>> > Antique cars have their own format, and its not Motor Trend.
>
>The question was about driving them.

Automobiling and driving are concerns for another newsgroup,
too. Go there with that.

>Seems to me this is all about what some folks don't want to see in
>QST.

Shame on them! QST is promotion of "what is good for ham
radio" directly from the Church of St. Hiram in Newington.

>Why? I much prefer Rocky Road. What is wrong with live and let live?

It would seem NONE are allowed to "live" except by the
Commandments of the Church of St. Hiram.

>Interesting. Perhaps a quote from a long-time poster to this newsgroup
>would be appropriate at this point.

None are so long-timed or prolific as Rev. Jimmie Callsign,
pedantic parson of the newsgroup, regularly preaching his
Sermon on the Antenna Mount.

>Here's the google quote:

Google is his witness. He would be lost without it. :-)

Here's another little gem, Jimmie:

"US ham radio is all about working DX on HF with CW."

No Google needed.

your "nostalgia."

> You may have worked for government contractors for most of your
> career, Len, but except for your hitch in the Army, how much time
> have you worked for "THE government" directly?

I never worked for any "THE government," Phil, only the
USA government during an 8-year "hitch" (colloquial
expression referring to an enlistment period, not to be
confused as having anything to do with horses or cavalry).
Four years active, four more years reserves.

Do you think DoD contractors are somehow divorced from
seeing where their work is used or applied? I can assure you
that no other USA government facility after 1960 ever had, or
venerated, a type 42 or 43 vacuum tube. I did once see a
manual morse key on a desk...nice gold-plated one used as

an ornament and paperweight on an officer's desk. No wire
connection to anything.

Ever see a brigade or regimental level field signal center in
operation, Phil? I did about a year before the Gulf War.
Not ONE circuit using morse code. Everyone was busy
doing communicating, getting the messages through
anyway. I don't think that their nostalgia was about ancient
6-pin tubes, just getting out of dry sand and heat at Fort
Irwin.

> Certainly in the
> non-military end of "The Government" one learms that if the toothpick
> is reusable, it gets reused until it is no longer usable, no matter
> how antiquated it becomes or how many mouths it passes through.

Should I pass that "suggestion" on to my congressperson
to forward to Health and Human Services?!?

Phil, the solid-state era began in all electronics roughly at the
beginning of the 1960s. That's 4 decades ago. Manual
telegraphy is NOT a protected species and conserving it is
NOT an environmental issue. Feel free to disregard asepsis
in your dental hygiene if you wish, those are your teeth.

Andy,
No, most Russians are better educated than 'Bill',
and write a more coherent sentence. 'Bill' is a typical
American excitable fool who can't seem to string a few
words together intelligently. Just another example of
our great school system who seems to be trying for a
political career. In other words, just a manipulative
politician 'wannabe'. Or even in more simple terms,
he's stupid...

Sorry to burst your bubble but the requirement for periodic
frequency and transmitter performance measurements went away a
long time ago. The licensee is responsible for keeping the
station's parameters in tolerance at all times without the FCC
Rules telling him how and when. Modern transmitters have alarm
circuitry which warn of out-of-tolerance operation which, if
not corrected after three hours, is supposed to dump the
transmitter.

Anyone could and still can make measurments for compliance
purposes. The main reason that "consultants" and "frequency
measurement services" got the job was that they had the
necessary instruments and experience to do the job adequately
with no exertion by station staff and their measurements served
as a calibration check of the station's own instruments, but
they never were required to be PEs or otherwise "certified". We
knew whose work products to trusr and whose not to.

> Makes for some comfortable billing revenue for a few
> communication attorneys though, so it can't be all bad...

In your dreams, brother. Most of the comm attorneys whom I know
that take amateur cases do so for very mimimal or no fee if the
case has merit.

Did I ever use the phrase "modern and efficient" when I wrote about
it? Those words in Federal-speak mean "adequately funded". No way
that "adequately funded" can be applied to the FCC then or now.

Take THAT to your Congressrep.

Nah - 120 VAC feels much different from 67.5 VDC - been there
with both, not by intent, and have no desire to repeat either.
>
> Do you think DoD contractors are somehow divorced from
> seeing where their work is used or applied?

My seven years working for "DoD contractors" (including one that we
both worked for at about the same time) led me to believe "yes"
which is why I finally decided to leave that field of endeavor
a.k.a. ratrace.

> I can assure you
> that no other USA government facility after 1960 ever had, or
> venerated, a type 42 or 43 vacuum tube.

I do know that equipment of that vintage and home-brew manufacture
was in use at other agency installations well past 1960. Ditto for
WW-II furniture. "If it's still usable, use it" was the slogan of

the day. My office safe was built in 1884 and was finally passed to the Customs Service when we moved in 1990.

> I did once see a
> manual morse key on a desk...nice gold-plated one used as
> an ornament and paperweight on an officer's desk. No wire
> connection to anything.

There were plenty of working Morse keys in every FCC office. All the technical staff members were required to be Morse-qualified although only a few were hams, so it was natural to use Morse as a communivations tool. We even had Morse HF CW fixed and mobile communications capability up through the 1970s, primarily as a backup for our wireline comms and RTTY.

I have a personally-owned J-38 (WW-II vintage) still-working key sitting on top of my Pentiun-III (obviously ancient) computer, also without wires to anything else. What's so unique about that?

> Ever see a brigade or regimental level field signal center in
> operation, Phil? I did about a year before the Gulf War.

Does the three years that I spent (as a contractor's on-site rep) at the USAF HQ 15 AF (SAC) comm center before the Vietnam fandango count? Or the orientation tour at USN Atlantic Fleet HQ comm center before the Gulf War?

> Not ONE circuit using morse code. Everyone was busy
> doing communicating, getting the messages through
> anyway. I don't think that their nostalgia was about ancient
> 6-pin tubes, just getting out of dry sand and heat at Fort Irwin.

Isn't it great to be with an agency with an open checkbook? That never happened at my agency. Then again, none of them were ham radio operations anyhow.

It's your tax money too.....

Nope. It is just that a commercial license doesn't convey amateur radio
privileges. I don't recall anyone writing anything about amateur radio
ops being superior to those in commercial or professional radio.
Ooops--better add a smiley :-)

> No matter that once there were classes of radiotelephone

Now that you mention it, Leonard, amateur radio license exams were also
given in real regional FCC field offices by FCC personnel. Life's
funny, isn't it?

(the rest of your ravings snipped)

You can say it until your face turns purple, Foggy. I'll give you a
project if you like. Contact Daniel Donohue, last known address was in
Takoma Park, MD.
Ask him about CW operation from Bissau.

> >Won't do any good. Google is his enemy.
>
> No, just PCTAs who think they are hotshots in radio comms
> because they've had fancy titles and credentials.

Uhhhh, you've entertained us with your fancy titles and credentials (and
even entire histories of places where you've worked). Watch that double
edged sword.

> >>If you hadn't been such a toad, I might have told you. This isn't a

> "need to know" bullshit.

Look, Bozo, I told you what I could tell you. I did not tell you what I
couldn't tell you. There are other things I could probably relate
without giving away the store but I don't like your attitude. That it

irks you to not be "in the know" doesn't really phase me.

> HF radio propagation has been known fairly well since before
> WW2 and was better known after WW2, several decades

> [PCTA snow job to attempt proving some CW worth back
> before NPRM 98-143 was released]

Wanna get "Googled" again? My statement was in response to a claim that there was no government use of morse code. How're you making out in finding those archived posts where I supposedly claim originality for the idea of using the CW order wire? Nothin' yet?

> Heil has yet to prove anything other than attempting to hide
> behind some State protocol/procedure bullshit of "need to
> know." HF propagation is NOT some government secret.
> It wasn't secret in the 1950s and it wasn't classified as a
> security thing after the 1950s.

1) I'm not obligated to prove anything to you. 2) The things I cannot tell you have very little to do with HF propagation. You weren't told because you have no clearance, no need to know and because this is usenet.

> >>There is no obligation on the part of the Department of State to do what

There's been no misdirection. There has been no obfuscation. There have been things which I could tell you and things which I cannot tell you. My statement above means exactly what it says.

> Miccolis seems to be "obligated" to support the claims (really

Jim's comments are right on....and let's be serious here...this idea is dead on arrival other than going through the mechanics of the process.

The FCC is just letting the process run its course.

Cheers,
Bill K2UNK

Whew! Thanks for the yuks, Len. When were you ever stopped from making uneducated guesses about the technical knowledge of others or about another's job? I've always assumed that you'll write anything to make a case (I didn't know what the hell a "message case" is). Did you ever, for example, misquote someone and keep repeating the same falsehood for years? Did you ever make any blanket statements about N2EY's technical ability? W0EX's technical ability? my technical ability? I'd have to call those statements uneducated guesses.

Your uneducated guess on the Key Officers listings didn't pan out very well, did it?

How're you coming along finding those archived posts which will no doubt prove you right? *snicker* I'm a patient fellow. Go on with your research.

I do not support any measure of registration for ham gear in the manner similar to the way guns are registered but I do support any legislation supporting the sale of transmitting equipment to those that hold the appropriate licensure for that equipment. (I said transmitting, not recieving equipment)

IMHO, I think places like Radio Shack should have to ask for your license before you are allowed to purchase transmitting equipment. There definitely needs to be done with the sale of amateur equipment to non-licensed persons. (reference the problem with 10 meters for starters.)

If this is not the answer, what is? What allows us to normally purchase stuff we have a right to, by licensure, but keeps the transmitting equipment out of the hands of unlicensed persons?? A better way I would like to see this thread go.... Maybe there might actually be some positive suggestions.

Ya know.... most of the terminology like "for ID" or "destinated" or "first personal" and many other terminology/phrases that I have heard being used have been used by the "old timers" in my area, people who have been licensed at least 20 years or more.... If anything they are setting a bad example for the newbies coming into the hobby as they may have a tendancy to think that is the way it is supposed to be done since the "old timers" are doing it that way. Prime example, the use of "for ID" was a learning experience for me. I listened (and still do) to the ham bands on scanners for quite a while and heard that particular phrase quite often. Therefore I deduced it must be a standard practice since I have not seen a book that truly handles how a QSO should be handled on voice modes. The ARRL text barely covers it. Maybe someone will write a book about that eh??

Another one is the usage of the word "clear." In other services the word is used often, and there is no problem with it. I view it as a courtesy to others who were courteous enough to wait until you were done trying to call the person you were trying to call and letting them know you were done.... But I am sure there are others with a different opinion. In the absence of text or rulebooks covering a particular issue, I guess a person needs to make their best common sense guess.

>another's job?

This is an unmoderated newsgroup permitting anyone to
access it. Nobody has stopped me physically or electrically
from using it. Some individual ethnic cleansers have been
continually trying to scrub away those wanting amateur
radio to get out of the last century and into the new millennium.
All of those ethnic cleansers are PCTAs. They turn it into a
weird soap opera trying to do all that cleansing. :-)

>Did you ever,
>for example, misquote someone and keep repeating the same falsehood for
>years?

What "falsehood," Ma Perkins? :-)

>Did you ever make any blanket statements about N2EY's technical
>ability?

Yes. He "designs and builds his own radio equipment" just
like that Elecraft K2 he has described. He must have
"designed" it. :-)

Now Jimmie will just have to jump in here and say "he never
said that and everyone go back to Google, now, now." :-)

I don't recall ANY statement about blankets, though. Better
get right over to Google and search and search until you
find one.

>W0EX's technical ability?

No. I don't think he has much. I remember well his trying
to make intelligent remarks with Cecil Moore. He might
have tried real hard, but nothing much came out, would up
just being trying.

>my technical ability?

I'm not too fond of yours, either. Hard to tell if you have some
since so much time is spent in here attacking the persons
of your "opponents." :-)

Remember, 7 x 24 = 168, nor 148?

>I'd have to call those statements uneducated guesses.

You MUST disparage them. You are obsessed with
conservative-traditionalist "ethnic cleansing" in here
in order to portray the guru and elder statesman among
the PCTAs.

>Your uneducated guess on the Key Officers listings didn't pan out very
>well, did it?

I would expect "key lists" to be a listing of encryption keys,
the master listing of keys to be used. That's how it was
in older times before CWO Walker did his treasonous
work in the USN.

"Key officers" are normally the corporate or government lists
of "key people," the "key" referring to important/valuable
persons and liberally used to inflate egos of the named "keys."
No doubt State thinks ALL its embassy staff are "key players."

Call them what you will. I say staff listings are just staff
listings regardless of the fancy list heading.

>How're you coming along finding those archived posts which will no doubt
>prove you right? *snicker* I'm a patient fellow. Go on with your
>research.

Why? I don't live in Google trying to find the least bit of
FIVE YEAR OLD POSTINGS to avenge some perceived
slight. Went there once recently, that was that.

I'm still waiting for a technically-valid reason for switching
to CW to "coordinate" schedules and comm data, then
going back to TTY for regular messages. If TTY works, a
common-sense radio person would use TTY to
"coordinate" skeds. If CW is needed for "coordination"
then TTY won't work for regular traffic.

No doubt Heil is going to bitch and moan and issue misdirection nastygrams for ANOTHER 5 years without giving a technical justification. :-)

Scrub, scrub, scrub...

Nice to know that HGTV got a start for all those "appraisal"
programs!

The USAF got its birth courtesy of the US Army Signal Corps
and the contract purchase of a Wright Flyer years ago. How
long did the spruce-wire-fabric aircraft last? They had 100 W
airborne spark transmitters, too, but got around to using
vacuum tubes soon enough.

Whoopee. I remember lots of morse equipment at the Chicago
FCC field office...they were giving radiotelegraph tests the day
I took and passed my radiotelephone (commercial) license in
1956. Chicago is on the edge of Lake Michigan, remember?

> I have a personally-owned J-38 (WW-II vintage) still-working key
> sitting on top of my Pentiun-III (obviously ancient) computer, also
> without wires to anything else. What's so unique about that?

I would expect nothing else from a devout morseman.

>> Ever see a brigade or regimental level field signal center in

Please...the glare from your medals is blinding...

Fort Irwin is the US Desert Warfare training center. Training
there helped the US Army do a panzerfaust on Iraqi tanks
during 73 Easting in the 100-hour land war. Better than
Rommel could muster.

Did you think that modern tankers used knee keys inside
those M1A1 Abrams tanks? At 30 MPH over rough terrain?
Tankers were using VOICE in the field back in WW2, and,
worse yet, on VHF with FM, 10 channels crystal controlled
selectable by push-button! :-)

>> Not ONE circuit using morse code. Everyone was busy

>
> Isn't it great to be with an agency with an open checkbook?

Not my problem. No DoD contracting office lab had any
"ancient" equipment that I saw anywhere coast-to-coast.

As I said, Fort Irwin's training doctrine was pretty damn
good in the Gulf War. They didn't NEED manual morse for
anydamnthing.

> That
> never happened at my agency. Then again, none of them were ham radio
> operations anyhow.

So, by that veiled inference, you WANT amateur radio to
retain old, outmoded manual morse testing? Why?

> It's your tax money too.....

I'm not complaining about government spending on radio
things. Why are you?

Yee Haw! Good show!

Check this one: The word just came down thru the club reflector that "Delmarva Jon" AA1K nailed JT1CO for the first ever 160 WAZ. Stew Perry would be amazed if he was still amongst us. Jon done it all with high loss antennas around the compass.

"That dog, I say, that dog is about as sharp as a bowlin' ball!"

W4RNL has modeled at least two variations of the WBFD/T2FD design and put the
results on his website for all to see. No need to repeat that exercise unless
someone can show that 'RNL's model and analysis contains significant error.

One of the interesting things that results is that the WBFD/T2FD patterns are
virtually identical to those of a dipole of the same size, EXCEPT that the
WBFD/T2FD field strengths are lower. In some cases, much lower.

>> the
>> >> T2FD would pick up noise from all directions.
>> >>
>> >> 73 de Jim, N2EY
>> >
>> >Your and Dave's example is absurd.

No, it isn't. One of the limiting factors in hearing weak signals on the 160, 80 and 40 meter bands is the received noise level. Often the signal-to-noise ratio of a weak signal can be improved if a directional antenna is used for receiving, particularly if significant noise is coming from directions other than the direction of the desired signal. Because internally-generated receiver noise is usually not a limiting factor at these frequencies, it often works out that the use of a low-efficiency directional receiving antenna can improve the signal-to-noise ratio of weak signals on 160, 80, and even 40. This method is not limited to DX. This is why many ham rigs have a separate receiver antenna input.

The T2FD/WBFD is a low-efficency antenna, but it's not very directional.

>> >The T2FD supports local/regional
>> >communications and frequency switching.

The WBFD/T2FD patterns are virtually identical to those of a dipole of the same size, EXCEPT that the WBFD/T2FD field strengths are lower. In some cases, much lower.

The T2FD/WBFD is simply a dipole implementation that has broadband SWR characteristics - and lower efficiency. A dipole of identical size and height as a T2FD/WBFD will support local/regional communications better than the T2FD/WBFD it replaces IF it is properly matched.

>> >Its not a DX antenna.
Get
>> >over it.

Sounds like someone has a strong emotional investment in the T2FD/WBFD antenna. Must be sacred or something...
>>
>> "Amateur radio is all about working DX on HF with CW."

Who wrote that? Not me. Amateur radio is all about a lot of things - DX and CW are just two of them.

My original post was intended to generate a discussion as to why the media sensationalizes certain tragedies, while leaving others virtually untouched. "Uncle Bob" is a first rate jerk. Let's all go live in caves and dig for worms every day. Stop researching medicine and new energy sources and engine design. Toss out all the computers and TV's and burn down all the homes. Then we could all run through the forests and hop skip and jump and... die an early death from diseases we could no longer cure and watch people starve because we don't have technology anymore!
Just because this asshole dosen't know the benefits of space research doesn't
mean they haven't affected his life in more ways than could ever be dreamed. We have all benefitted from Space Exploration. Life has to move forward or it stagnates.

I believe the phrase came into use as a means of indicating compliance with
FCC rules requiring identification every so often, as opposed to
communicating your call with the other station(s) you were in QSO with.
The other guys know who you are, the FCC presumably doesn't.

In that context, it makes sense.

As has been pointed out before, W4RNL has done an analysis of the
T2FD/WBFD antenna. Nobody here has posted a description of any errors
in that analysis.

> WRONG as usual *PUTZ*, big surprise that. Jimbo has an MSEE,

No need for the pejoratives aimed at Mr. Anderson, Brian. It is a
common behavior of his to make mistakes about the qualifications of
those who disagree with him. It's similar to his mistakes about what
he and others have written in this NG. For example, his confusion
about my homebrewing, kitbuilding and restoration activities, the
difference between "unprofitable" and "bankrupt", his inability to
understand K8MN's communications work for the State Department, to
name just a few.

> Jimbo's record in his industry more than speaks for itself and the
> fact that you "dunno on what" is just one more example of your
> fundamental cluelessness.

Those who need to know that information have it. Mr. Anderson does not
need to know. This simple fact angers him, for some reason. Besides,
since Mr. Anderson has demonstrated that he cannot keep straight the
qualifications I have already mentioned, there is no reason to burden
him with more. Indeed, Mr. Anderson finds it necessary to frequently
rehash his military and employment experiences here, as if they
somehow have any bearing on amateur radio policy. Yet he never
explains what connection could exist.

A good, concise, clear statement.

In the real world of all electronics and radio, equipment and users
of same outnumber radio amateurs by a considerable margin.
That takes in all markets, from consumer to industrial to
scientific to non-amateur-radio radio users. Requiring a "papers
check" at retail stores, "authentication by certificate" or whatever
greatly inhibits retail trade of goods affecting the retailers while
only providing some minor mental feel-good to radio amateur
hobbyists. That would be further regressive to the amateur
market already burdened with losses of retail outlets for amateur
products.

One problem that I see (constantly) is that lack of amateur radio
publications showing their readers their relationship to the whole
of the radio world. They focus inwards to their hobby. That
mental myopia limits understanding any other radio except
broadcasting, evil CB, or cellular telephones. There are more
private and government land mobile, aircraft mobile, private boat
radios than the total of US amateur radio licenses. One out of
three US citizens is a cell phone subscriber so there must be at
least 50 million cell phones in the USA capable of emitting RF.
Cordless telephones emit RF when used, are in the millions in
the US. Keyless entry automobile locks emit RF each time a
driver locks or unlocks such a vehicle. Wireless Local Area

Networks is currently a thriving niche in consumer electronics emitting RF to relay video, music, high-speed computer data, outside weather sensor data, all for home use. There's probably no accurate record of the total number of (allegedly evil) CB RF emitters in the 11m area other than it being safe to say "millions" just on inspection of the nation's highways at any time.

All of those and more share the EM spectrum and radio amateurs must share the same spectrum. To share it properly requires understanding of their RF environment, not an ignorance based on old information on what radio was a quarter or half century ago. Radio amateur publications focus inwardly and as a result the readers get a tunnel vision picture of their relationship to the whole of the RF world. Too many think they are alone (perhaps invincible to a grandiose few) in the RF world. This greatly diminishes their ability to negotiate a better RF environment for their hobby.

More feel-good bureaocracy with more "permits to purchase" are not any answer for expansion of enjoyment of a hobby.

>dime-a-dozen bench tech jobbie floundering around yer keyboard today
>in a time warp.

Kellie run out of mood drugs...again?!? :-)

"Bench tech jobbie?" :-)

That can't be me since I was never employed as a job-shopper
or "temp" in the aerospace industry. Whom is Kellie
smutzing now? :-)

What "glory?" Doing work and getting paid for it reasonably
well, yes. Nearly all of that as an electronics design engineer.

Only one patent. No biggie. A few articles in McGraw-Hill's
biweekly Electronics magazine, BYTE, Microcomputing in
addition to contributing a dozen plus articles to Ham Radio
magazine that ceased publication in 1990 as well as being
an Associate Editor there for two years.

Kellie must be trying to rub smutz on Brian Burke. Brian
has already stated what he has done, where he was, and
in the service of his country in the military. What is more
important (and probably devastating to Kellie) is that Brian
can think for himself and is not afraid to speak out when some
OFs vent gas in here on the "correct, proper anything"
according to the OF's directives on what all hams must do.

Kellie must have been in the sauce again. Very confused
he is. Tsk, tsk, tsk.

>Jimbo's record in his industry more than speaks for itself and the
>fact that you "dunno on what" is just one more example of your
>fundamental cluelessness.

Who is this "jimbo" who has a "record in his industry?" One
of the centers of the US recording industry is out here in Los
Angeles. Lots of "jims" in the recording industry. One of
them may have or had an amateur radio license.

If Kellie means Jimmie Miccolis, there is a problem. That
"jimbo" hasn't stated WHAT "his business is" or even the
company name. It's an UNKNOWN. That "jimbo" seems
afraid to reveal "his business."

Without such identification it is impossible to ascertain any
"record." Is it a DVD? CD? LP? 45? An old 78? An
Edison cylinder? Stenotype belt?

>>
>> I worked the Johnston Island station on 75m SSB too. :-) :-) :-(
>
>Yee Haw! Good show!

"Good show?" A couple drinks and Kellie gets confused on
the entertainment industry. Must have pasted a QST cover
on his well-thumbed old issue of "Silver Screen."

Maybe confusion is endemic to PCTAs or all that beeping
advances Alzheimer's symptoms. There seems to be a

constant example of number confusion in here such as another OF who thinks that 7 x 24 = 148 (it is 168) and Kellie multiplied his single co-invention patent number to 26 separate patents (where his sole co-invention isn't even electronic let alone about radio)!

Maybe Kellie imagines he or his "jimbo" (whoever that is) once did a tutorial lecture on Maxwell's Equations? :-)

Like any good mathematician, Kellie should not drink and derive.

>in that analysis.

Oh, oh, ANOTHER Sermon on the Antenna Mount from the
pedantic parson! Another episode in the on-going soap
opera featuring injured egos valiantly fighting to show they
are "right" by derisively taunting others. :-)

Tsk, tsk, tsk.

"As has been pointed out before..." down-speak. There is no evidence that Rev. Jimmie even knew of Cebik and Antennex columns before "others" mentioned it...now he is a grand champion of antenna analysis by "others" using the Numeric Electromagnetic Code (NEC, not to be confused with National Electrical Code) program core using the method of moments and first available free (in FORTRAN source) in the early 1980s.

Roy Lewallen did a very nice adaptation and rewrite of the NEC core in his EZNEC program (as advertised in QST). Does Rev. Jimmie have a copy? [legal copy, that is?] How about the two others also on the market? Can he operate one? Does it take an MSEE to operate one? [no]

There's no sign that N2EY has done ANY antenna analysis at all...Rev. Jimmie would rather point fingers and say "W4RNL already did it" trying to align his "work" with that of Cebik's.

>

>No need for the pejoratives aimed at Mr. Anderson, Brian. It is a
>common behavior of his to make mistakes about the qualifications of
>those who disagree with him. It's similar to his mistakes about what
>he and others have written in this NG.

Tsk, tsk, tsk. More smutz-smearing. "Mistakes" are the re-definition of "truth" being what the PCTAs think, do, and command. "Disagreement" (with that of a PCTA) is re-defined as a near-capital offense, sullying the "honor" of some morsemen.

>For example, his confusion
>about my homebrewing, kitbuilding and restoration activities, the
>difference between "unprofitable" and "bankrupt", his inability to
>understand K8MN's communications work for the State Department, to
>name just a few.

Yes, tube-based homebrewing, once in a while using an actual semiconductor device, as featured in "Electric Radio" a non-newsstand "fanzine" for boatanchor and old radio fanciers. Making statements that he designs and builds is own equipment several times (note the "and") and then describing his Elecraft kit. "Restoration?" The only "restoration" seems to be the restoring of the good old days in amateur radio before Rev. Jimmie was born. :-)

Amazon.com announced in major newspaper business
sections nearly two weeks ago that it made its SECOND
SUCCESSIVE quarter of profit. Rev. Jimmie must have
been too busy to read of the outside world, busy with
studying "Electric Radio?" He took great offense because
one can buy a quantity of ARRL publications from amazon.
com ($25 or more) and not be charged shipping...yet the
same order for same publicaions at same price from ARRL
direct require EXTRA shipping charges. Tsk, tsk, tsk, one
little negativism towards the Church of St. Hiram and the
pedantic parson got all huffy! :-)

Did "K8MN" do "communications work for State?" No.
Dave Heil did communications work for State. The US
Department of State is not a sponsor of amateur radio
activity nor does it use amateur radio as part of
US government communications. Chalk up another
negativism, a large minus point for the pedantic parson.

>> Jimbo's record in his industry more than speaks for itself and the
>> fact that you "dunno on what" is just one more example of your
>> fundamental cluelessness.
>
>Those who need to know that information have it.

"There you have it." Unverifiable statement, supported by
NO evidence is suddenly re-defined as "truth." Wow,
Orwellian Truthspeak pasted all over the newsgroup! :-)

>Mr. Anderson does not need to know.

Nobody else "need know." Is it some kind of security
classification authorized by the US government? A
foreign government? Trade secret?

>This simple fact angers him, for some reason.

Not really. SNOW JOB blowers are a nuisance. Fish
stories smell as bad as rotten fish. Unverifiable
information is just FALSE statements of braggadoccio.

>Besides,
>since Mr. Anderson has demonstrated that he cannot keep straight the
>qualifications I have already mentioned, there is no reason to burden
>him with more.

What "qualifications?" Self-promotion? Bragging?
Refusal to reveal major life-experience data?

>Indeed, Mr. Anderson finds it necessary to frequently
>rehash his military and employment experiences here, as if they
>somehow have any bearing on amateur radio policy. Yet he never
>explains what connection could exist.

Oh, my...ERROR...the "connection" is that HF radio is HF radio regardless of the radio service using it. Radio physics in amateur radio is the same as any other radio service. Radio physics does not change by human legislative classification.

That has been repeated in here many times and is TRUTH in all-capitals, no re-definition at all.

Rev. Jimmie has a loss of circuit continuity. He cannot see that much of HF radio use by hams of today is AS IT WAS FIFTY YEARS AGO in part of the rest of the radio world. That's more serious than myopia or mental tunnel vision. He won't acknowledge any "connection" because that would dissolve his fantasy world of preserving the old ways forever and ever.

The fantasy is "US amateur radio is all about working DX on HF with CW."

They are the few, the proud, the Morsemen!

Long may they wave. [...bye-bye...one hopes]

The problem is that such a system would amount to de facto
registration.
>
> IMHO, I think places like Radio Shack should have to ask for your license
> before you are allowed to purchase transmitting equipment. There definitely
> needs to be done with the sale of amateur equipment to non-licensed persons.
> (reference the problem with 10 meters for starters.)

OK, fine. I go to RS or HRO or wherever and buy a new Ikensu DGX-5000.
SHow my license and the clerk takes down the info.

Couple years later I sell the rig. Do I have to check the license of
the buyer? How do I know the buyer is a for-real ham, anyway, if the
sale is via eBay or some such? Do I have to let RS or HRO know that I
sold the DGX-5000?

Suppose a ham's unlicensed spouse wants to buy "that dream rig" as a
present - how can that be done? What about prospective hams who are
going to take the test in the near future? Etc.

Most of all, what about the purchase of rigs that a ham is "partially"
licensed to use? Example: New ham has a Tech but wants to buy an
FT-897 or similar MF/HF/VHF all-in-one box. This ham is licensed for
VHF/UHF but not HF - can he/she buy the rig legally or not?
>

Simple - more and better enforcement of existing laws. Go after those
who are actually misusing the gear, not those who simply own it.

Your comments don't seem to address technical ability. Don't care to
answer that one either?

> >W0EX's technical ability?
>
> No. I don't think he has much. I remember well his trying
> to make intelligent remarks with Cecil Moore. He might
> have tried real hard, but nothing much came out, would up
> just being trying.

You think but you have no way of really knowing. It looks like an
uneducated guess on your part.

> >my technical ability?
>
> I'm not too fond of yours, either. Hard to tell if you have some
> since so much time is spent in here attacking the persons
> of your "opponents." :-)

I didn't ask you if you were fond of my technical ability. I asked if
you'd made any statements without possessing any real knowledge of my
technical background. Your last sentence above could apply to you.

> Remember, 7 x 24 = 168, nor 148?

Remember "Go such an 807 plate cap"? How about "nor 148"?

> >I'd have to call those statements uneducated guesses.
>
> You MUST disparage them. You are obsessed with
> conservative-traditionalist "ethnic cleansing" in here
> in order to portray the guru and elder statesman among
> the PCTAs.

You MUST be a mind reader. You know all about what other people can and
can't do. You divine insight to their technical abilities from the
aether. From what ethnic minority group do you spring?

> >Your uneducated guess on the Key Officers listings didn't pan out very
> >well, did it?
>
> I would expect "key lists" to be a listing of encryption keys,

> "Key officers" are normally the corporate or government lists
> of "key people," the "key" referring to important/valuable
> persons and liberally used to inflate egos of the named "keys."
> No doubt State thinks ALL its embassy staff are "key players."

Ah, you're starting down the path of deliberate falsehood again. I've
already addressed your nonsense about what State "thinks" about its Key
Officer listings. Those listings don't carry the names of those who
worked under me.
They don't list the entire staff of the Political or Economics
sections. They don't list the entire staff of the Defense Attache
Office. They don't list the entire USAID staff.

I want to be sure that I understand one point you've attempted to make:
You believe that State sends out these lists twice yearly in printed and
electronic form to every U.S. embassy and consulate to massage the egos
of those listed therein. Is that about it?

> Call them what you will. I say staff listings are just staff
> listings regardless of the fancy list heading.

You surely say that now rather than eating crow. Just a week ago, you
called them Key Officer listings and claimed I wasn't on any of them.
You're certainly rewriting your history on the fly.

> >How're you coming along finding those archived posts which will no doubt
> >prove you right? *snicker* I'm a patient fellow. Go on with your

> slight. Went there once recently, that was that.

I wouldn't live there either if I were you. Google can be a very scary
place and you could be bitten on the ass by your own words. What you
describe as a slight wasn't that at all. It was you stating a falsehood
over a period of five years despite having been corrected a number of
times. Would you like me to post every instance where you've repeated
that lie along with every instance of rebuttal by me? Google can be a
very scary place to a guy like you.

> I'm still waiting for a technically-valid reason for switching

Why are those terms/phrases a bad example?

> Prime example, the use of "for ID" was a learning experience
> for me. I listened (and still do) to the ham bands on scanners for quite
a
> while and heard that particular phrase quite often. Therefore I deduced it
> must be a standard practice since I have not seen a book that truly
handles
> how a QSO should be handled on voice modes. The ARRL text barely covers
it.
> Maybe someone will write a book about that eh??

Much ado about nothing. The language we use on the air
isn't cast in stone. The three phrases above I hear and have
used myself. Who cares?

> Another one is the usage of the word "clear." In other services the word
is
> used often, and there is no problem with it. I view it as a courtesy to
> others who were courteous enough to wait until you were done trying to
call
> the person you were trying to call and letting them know you were done....
> But I am sure there are others with a different opinion.

I use "Clear" myself. If I transmit "K2UNK listening" on a repeater
and no one responds, I'll usually then say "K2UNK Clear" if
I'm going to change to a different repeater. It tells anyone that heard
me that I'm not listening anymore.

> In the absence of
> text or rulebooks covering a particular issue, I guess a person needs to
> make their best common sense guess.

We have too many nonsense rules. If it isn't the law, then personal
operating practices that differ from what some unwritten rule or
practice that others believe is sacrosanct just doesn't both me.

Cheers,
Bill K2UNK

>>that witness them to celebrate or mourn them in our own thoughts and
>>circles.

Part of the problem is that the space program, particularly the shuttle, was originally sold to the American people as something quite different than the inherently risky, experimental, cutting edge program that it really is. Remember when we were told that STS would be a "space truck" that would do all sorts of jobs better and cheaper than "throw-away" rockets?

Much of the Shuttle's original stated mission has been taken over by "throwaway rockets" and unmanned satellites.
>
> I know it's morbid to say "only" when we are discussing people's deaths,
>but the truth is there have only been 17 deaths in America's space program
>since 1968. That averages out to less than two people a year.

Redo the math, Steve. One person every two years.

But consider the Shuttle's performance record. Two complete losses in less than 115 flights - that's a failure rate of once every ~57 flights.
>
> Now, consider that the benefits of the space program touch millions of
>people every day. In my case I am an ER nurse, and I know for a fact at
>least
>a dozen items I use on a near-daily basis are spin-offs of or were directly
>developed for the space program. Now multiply my experiences by 30,000 (just
>a

>rough number of ER nurses) and it's easy to see how it truly DOES benefit
>millions.

Agreed.

But the real question is not "should we have a space program?" - the obvious answer is yes. The real, hard-to-answer question is, "are we going about the space program in the best way?" - and that's not an easy question to answer.

How much does a typical STS mission cost, beginning to end, and how much benefit do we get from it?

> The medium we share these comments on...while not directly created for
>the space program, was certainly a significant factor in it's proliferation.

Sure - the basic development back in the '60s and '70s.

Please understand I'm NOT saying the money is wasted or that manned space flight should stop. Just that there may be better ways than the ones currently in use.
>
> Now we're up to billions.
>
> It's astounding.

Not really. Look at the progress in aviation in the 20th century - from Kitty Hawk to the first supersonic flight in 44 years. From supersonic flight to the moon in 22 more years.
>
> My prayers to their Families, Godspeed to NASA in finding out what

So when I was a teenager, I shouldn't have been allowed to purchase the
transmitter that I saved up for while studying for my license?

> If this is not the answer, what is? What allows us to normally purchase
> stuff we have a right to, by licensure, but keeps the transmitting
equipment
> out of the hands of unlicensed persons??

You don't need a license to buy a car?

> A better way I would like to see
> this thread go.... Maybe there might actually be some positive
suggestions.

The whole concept of requiring a license to purchase, and/or
registration of transmitting equipment is just a beaurocratic
impossibility (IMHO)...for no other reason than the fact that
there must be hundreds of thousands of rigs out there
already that can be and are bought/sold through many
non-commercial venues (classifieds, ebay, flea markets, etc.)

Cheers,
Bill K2UNK

>That can't be me since I was never employed as a job-shopper
> or "temp" in the aerospace industry.

Not according to your frequently recited "CV", Lennie.

>Whom is Kellie smutzing now?

We could ask the same of you, but WE know that the only person YOU are
"smutzing" is yourself. The funny part is you don't even realize it!

>What is more
> important (and probably devastating to Kellie) is that Brian
> can think for himself and is not afraid to speak out when some
> OFs vent gas in here on the "correct, proper anything"
> according to the OF's directives on what all hams must do.

Acutally, you can change "devastating" to "laughable" since Brian is
constantly stepping on his own tail. Some people should be a bit more
reluctant to "speak out" when they are so-clearly confused.

>If Kellie means Jimmie Miccolis, there is a problem.

Who's "Jimmie" Miccolis? I don't recall him calling you "Lennie" or
anything else other than "Len" or "Mr. Anderson".

I >>DO<< recall YOU whining about this being done to you ahnd how you
wouldn't do that to anyone who didn't do it to you.

But you ARE a pathological liar, and we do not expect you to live up to
your word, ergo we are not disappointed.

Ya PUTZ.

Steve

When I worked for the Israeli Ministry of Communications (granted, a long time ago), they had a transmitter registration system like that. Dealers or private parties were not allowed to import or transfer possession of radio transmitters to anyone else without written permission of the Ministry (the equivalent of the FCC) and all radio licenses in all services had model and serial numbers recorded on them. The dealers/sellers were required to keep an inventory log of equipment sales/transfers by model and serial number. My job, among many, included review of the applications and approval of the transfer permits. It took up about an hour a day of my time and several hours a day of the two clerks who worked for me. And that was a very small country with not a lot of radios in "civilian" hands.

Let's not get into "rights" - let's just talk about the bureaucracy that would be needed for that here...makes the collective DMV nationwide look like a picnic.

Fortunately I believe that the FCC will agree that it's not for us.

You have a reading problem? Reread my comments in the restructuring docket about dropping the Morse test requirement and the NCI reply comment referring to it, and THEN ask again whether I want to retain Morse testing in the ARS....(short answer - I do not).

I may be a competent Morse examiner but a "morseman" I am not.

I have built kits, Heathkit oscilloscope for example. Also, made many mini circuits: op-amp circuits, counter circuits, telephone circuits, and various others. Many visits to radio shack. Took apart power supplies, or other sections of items that would have been thrown away.

Didn't get into (radio) electronics until later. Made some transmitter circuits (my own). Now I have a Spectrum Analyzer to use.

I took a few rf and communications courses. In one microwave electronics course the approach was not too useful. In first class Prof listed reference books for the course. I was disappointed that not one of these was an ARRL publication. ARRL publication often has very good book with practical circuits. If there was a lab and ARRL book was one of the books, the course quality would be ALOT better.

I would like to do more, alot more. I would like to do some coil circuits: torroids, baluns, matching circuits, coupling circuits. These topics often do not get enough coverage in an academic course.

Unfortunately, pretty soon amateur radio will probably become just a diversion to me. A fond memory. Then, the only homebrewing I might do would be homebrewing beer.

Sounds like John Aschcroft is gettin' bored again. How did this
jackmeat get so much power, he wasn't elcted to office. Come to think
of it, neither was his boss.....What the F**K is Ashcroft doing,
just 'cause he got beat in the last election he ran in by a dead guy
doesn't mean he has the right to totally trash OUR Constitution and OUR
rights. "OUR" includes you..... Thank God we only have 2 more
years of this crap. Hopefully we'll survive it but I have my doubts.

Hmmmmmm. Let me ponder this one. Hmmmmmm. It'll only be speculation on my part but I'd guess it is because he doesn't have a callsign. He doesn't have a callsign because he doesn't have an amateur radio license. He doesn't have an amateur radio license because, despite a decades long interest, he isn't really THAT interested.

My Aunt Faye had a lot of radios too. She didn't have an amateur radio license either but she enjoyed listening to WBZ, KDKA and WWVA in her room, in the kitchen, in the living room and out on the porch.

Do try and get it right, Vipul. K4YZ did not write the statement you attribute to him. I did.

Alrighty then Jim.... like I said to the other guy.... what is the solution then, to keep the transmitting equipment out of the hands of the ones that should not have transmitting equipment? Any constructive ideas? We as a collective group can sit around and bitch about the problem with 10 meters (and other bands as well) but unless something is done, it will get worse.

Sounds good to me.... "listening" or "monitoring" after a call is nice,
short and sweet and gets the point across. I usually use "clear" after
making a direct call to another, and if I am going to a different frequency
I will say something like "KC8PMX clear, switching to _____ frequency," as
opposed to QSY which must be one of the deadly sins apparently on FM voice
as I have heard.

I would agree with a part of that statement. For me the rules that are
clear as a bell are fine, it is the ones that are completely open for
interpretation that need to be cleared up.

Vipul, how many times has someone asked you to QUOTE CORRECTLY...?!?!

You whine and snivvel about how "low tech" you percieve Amateur Radio to be, but YOU don't seem to posses the skills to be able to get a simple quotation correct.

What's your problem?

Steve, K4YZ

And to answer your question although you improperly quoted me, is that Leonard H. is emabarrased, perhaps even ashamed, that after decades of "professional radio experience", he is not able to do what even YOU can do, Vipul...And that's put a radio transmitter with more than 5 watts of RF on 27mHz on the air.

Lennie thinks that only night-school educated EE's should be allowed to operate a radio transmitter, and then only after having served in a rear area radio relay station in the 1950's.

Lennie wouldn't HAVE "callsign envy" if he'd just invest $10 and 30 minutes of his time at a local VE session...Might even give some of his rants here some credibility.

Also patience and timing. W1GKK, the only ham to ever work ALL countries,
not just the active ones, said the key to DXing is to "be there when
they're there". Oddly, his accomplishment was done solely on 20 meters.

Just an idea for a new thread....

Should the F.C.C. be allowed to collect and "maintain" the fees and fines etc. by their offices in order to be self sustaining or should the fee's go into the "general fund?" One thought would be that they could budget for more enforcement activities, but I am sure there are many other thoughts on this topic.

Your comments please,

I don't think so just because then the FCC would be
able to "find" enforcement problems that don't matter
much and make money off of them. Kind of like the
small town speed trap that generates money for the
town. OTOH that might just be what's needed to
clean up the "freeband" & 11 meter problems ;^)

BTW I like your "CW" message!

The real answer would be to fill the spectrum with 'use' to
the point the illegals COULDN'T use it. Look at 75/80
meters, even if you do have a license it's hard to find a
free spot to use. If the lower portion of 10 meters was
being used that way the "freebanders" would just about
disappear from there. Then make the FCC do some
more enforcement in the 26.0 - 26.9 MHz and 27.5 -
28.0 MHz area to slow down all the "freeband" crap!

The only way I would approve of the radio registration
at point of sale would be if ALL amateur radio equipment
was excluded and just business radio buyers be tracked.
That "might" slow down the number of business frequencies
being used by non-licensed users, but I wouldn't hold my
breath on that one!

Bill
Not to mention the new industry that would be set up. Just like
the 10 meter linear amps and "export" CB radios that are "illegal"
to sell in the U.S. but you can buy NEW ones right now in just
about any truck stop, CB shop, and of course Ebay. We would
have the same thing with other radio gear being manufactured for
"export" only then being sold here without any action at all
from the FCC.

That "regulated" future would bring ads like this;
"Brand new Cobra 10 thru 160 meter CB for
EXPORT only (wink, wink, nudge, nudge) radio
tuned and peaked will TX .5 MHz thru 30 MHz
no gaps. Swings over 170 watts. Free "roadmap"
with every radio order!

I myself don't use "destinated" or "KB9TMP for ID" but I do use
the QSY and some other "Q" signals. It just seems shorter to say
"KB9TMP QSY to 146.58" than it does to say "KB9TMP switching
frequencies to 146.58". I also do a lot of "public safety" type radio
comms and the use of "10" codes are a large part of that, just like
"Q" codes are a part of the ARS.

I think Ryan meant "transmitting equipment that requires a license to
use".
>
> So when I was a teenager, I shouldn't have been allowed to purchase the
> transmitter that I saved up for while studying for my license?

Good example, but most hams today use transceivers - which makes the
problem even worse, because a ham-to-be who wants to get a station set
up while in the process of getting the license would be forced to wait
until the license is in hand before buying a transceiver.
>
> > If this is not the answer, what is? What allows us to normally purchase

> > out of the hands of unlicensed persons??
>
> You don't need a license to buy a car?

Here's another probelm - what about the sale of kits, and parts that
are commonly used to build transmitters? Would they be restricted? Who
decides what is a "transmitting" part?

> > A better way I would like to see
> > this thread go.... Maybe there might actually be some positive
> suggestions.

Here's another angle:

The real problem is misuse of equipment, not ownership. The proposed
rules could cause some people to get ham licenses just so they could
buy equipment, either for their own use or resale. 10 meter problem,
you say? Check out the FCC enforcement letters for January 24 on the
ARRL website. FCC has cited 10 NYC area hams and 2 unlicensed persons

for unlicensed operation on 26.555 MHz (and in some cases 25.540 MHz) - two frequencies that are not near any ham band. Some interesting points about those who received letters:

- 6 Generals, 1 Advanced, 1 Technician
- None are newbies. License dates range from 1994 to 2001, with the median between 1997 and 1998. (Those dates are not necessarily the dates of initial license, just the date of last renewal or new license issue).
- None of the 7 who have birthdates listed with license info are kids. Ages range from 36 to 60. All but one is in the 44-60 year old range.

If those who received letters actually operated on those frequencies, one has to wonder why, since all but 1 is licensed to use all of the HF/MF amateur bands.

True story: About 10 years ago, a local ham showed me something he'd picked up off the trash. It was a BC-459A - WW2 vintage transmitter used in aircraft, covers 7-9.1 MHz. It was unmodified, in excellent shape. He got $25 for it at a local hamfest. (Yeah, I KNOW I coulda told him it was worth 50 cents and bought it, but I don't work like that.)

Point is, anybody could have picked it off the trash and with a little effort got it working. How you gonna stop stuff like that?

Perhaps, Dave.

Or maybe Mr. Anderson's interest in amateur radio is not about being a ham, but rather about damaging, eroding and destroying amateur radio.

Think about all the things Mr. Anderson has expressed his opposition to. Yes, there's the code test, but that's just the smokescreen. Note how he denies/minimizes the public service contributions of amateur radio, denies/minimizes the use of Morse code in both the ARS and other services, and challenges the technical qualifications of complete strangers based on their code-test views. Note also his continuous harping about the ARRL and his opposition to the licensing of young people.

Guess who wrote the following, in reference to young people in amateur radio - specifically young people using Morse code on the air:

"I've always had trouble with integrating "youngsters" in what is a primarily _adult_ skill/technique recreational activity."

Just the kinda person you want setting entrance requirements, huh?

Note particularly that his focus is always to MINIMIZE amateur radio, and attack its accomplishments, traditions and institutions, rather than to become part of it, or even to express a positive vision of its future.

IOW, he'll tell you what he's against, but never what he's for, or why he's so interested.

As a professional in the asset seizure and forfeiture field when I
was with the FCC I agree with you 1000%. Our experience with local
law enforcement which is able to keep a certain percentage of seized
assets in the "War Against Drugs" is frightening, and it lowers the
professional quality of law enforcement.

And in any case, The Congress intended that this "income" go to the
general fund, not to the agency. They are very definite about that.
It forestalls one obvious avenue of crookedness.

> OTOH that might just be what's needed to clean up the "freeband" &
> 11 meter problems

What is needed is a clear commitment from the top down that (a) the
11 meter and "freeband" problem is a real problem that won't go away
if it is ignored, and (2) that the field enforcement troops - who
know how to do the job - be allowed to do that job instead of being
restrained as they are now. Once those commitments are made, the
rest will follow.

Instead, the powers-that-be first gutted and then abolished the
separate Field Operations Bureau and hid the remnant inside an
overall Enforcement Bureau, most of whose decisioon-makers were used
to having enforcement cases worked out on paper between Washington
attorneys, not by enforcement agents going out in the field and
nabbing the bad guys.

Changes do need to be made if the job is to get done.

When they mean by "two way" radio coms does that also include things like FRS and CB Radios? That's just ridicious. Maybe soon they will require people registering television sets.

Before you get your panties in a wad, it is not the government trying to
force registration.

It is a proposal for rule making submitted to FCC by a ham radio operator.

The chances of it being adopted are little and none.

He claims to want to open up amateur radio for all--all except the
young.

> Note particularly that his focus is always to MINIMIZE amateur radio,
> and attack its accomplishments, traditions and institutions, rather

> than to become part of it, or even to express a positive vision of its

He attacks the ARRL but he isn't a member. He attacks radio amateurs
and their accomplishments but he isn't a radio amateur.

> IOW, he'll tell you what he's against, but never what he's for, or why
> he's so interested.

That's an easy one. He is interested because "amateur radio is a fun
hobby" though how he knows that is beyond me. I don't understand how
one can claim interest in something for decades without bothering to
pursue participation or how claimed interest results in the bad-mouthing
of a large group of existing participants.

> > My Aunt Faye had a lot of radios too. She didn't have an amateur radio

Well, Len has come no closer to Aunt Faye in obtaining an amateur radio
license and she had no interest at all in amateur radio. She just liked
Larry Glick's program and hillbilly music. She did buy me my first
guitar and I believed it pained her that I ended up in a blues band.
That aside, she was proud that her nephew was a ham radio op and loved
to tell the neighbors about receiving radiograms relayed by K8AN who ran
the local Kroger store.

> (and other bands as well) but unless something is done, it will get worse.

Several things:

First, as KB9TMP so correctly points out, make the ham bands unattractive to freebanders and other intruders. Imagine the bands full of hams running CW, SSB, data modes, etc, 24/7, with nary a space for an intruder. Those who do intrude should be "actively ignored" - IOW, their existence should not be acknowledged. The use of non-voice modes is a good idea because most intruders probably won't be able to understand them. (Yet another good reason to USE CW!!)

Second, we hams should give FCC the evidence they need to track down the intruders. This means AUDIO TAPES with notes of frequency, time, date and receive location, at least. FCC enforcement is complaint-driven, and the complaints have to be credible, and usable by FCC.

Third, hams need to avoid knowingly helping freebanders by selling them things or helping them with technical stuff like "mods".

Fourth, publicity about what ham radio is and does can only help the situation. The general public needs to know the difference between legal and illegal stations.

Trying to interdict radio equipment will hurt hams more than the bad guys.

I recall the exchange where Hans told us about his 14-year-old age-requirement
idea in his comments to the FCC. Comments that were filed long after the
comment period had ended, when FCC was supposed to only be getting reply
comments. That was during the period when he was referring to you as a
"convivial stormtrooper from central africa" and asking about your boots and
armband being too tight. He also stated that the parents of some young hams had

"conned the VEs into passing" the kids, or some such.

It's simple, Dave. His "interest" is the desire to damage, erode and ultimately
destroy amateur radio. Cutting out the young folks is one way to do that.
Stirring up arguments and hostility over what has become a non-issue (code
testing) is another.

Championing the use of a big-yet-inefficient antenna like the WBFD is another.
Imagine if lotsa hams used 'em....

Now we'll be treated to another bunch of his posts full of name-calling,
factual errors, misquotes, faulty logic, and just plain insults. So typical.
The "Reverend" nonsense is a bit surreal, considering my religious beliefs.

No, if anything they would like as many people to park
themselves in front of the Great Pacifier Tube for as long
and as often as possible. Or more accurately, go to work,
come home and be pacified, and simultaneously stimulated as
a consumer to buy things to be a useful economic widget.

While actively talking with someone, some naughty subversive
thought might be unleashed. We must not have that! Approved
drivel, entertainment, and commercial messages only, please!
;)

So licenses for anything that might make a person more
involved and active, and incentives for anything that makes
you passive, lazy, content, and manipulatable. That's why
TV is still free. :)

Sounds good. There must be some like-minded people in your area. I think
you live in the Boston area? Don't know for sure, but I thought you
mentioned that.

Hmm, did the Prof. recommend his own books? The ARRL books might be
considered too "general" or "practical" for college courses.

> I would like to do more, alot more. I would like to do some coil circuits:

> not get enough coverage in an academic course.

Definitely not. It seems you are looking for something with a more
practical bent than the academic courses. That is one of my criticisms
of those courses.

ARRL has an antenna design course that might be of interest to you.

Homebrewing beer is great fun. I've done a bit in my time. I haven't been
able to do much lately, with the ham club, hockey and amateur astronomy
hobbies.

And you must believe me that I do know the distance, the bearing and the
reciprocal bearing to Johnston Island. Jim's comment indicated that
Johnston Island is a tough one from this part of the country. Then
again you knew that.
All that's left to decide is the reason for your smart-assed comment.

> Jim, Johnston Island is the same distance regardless of band.

Not true. Using groundwave on a very low frequency band, the distance the wave travels will be shorter than with ionospheric propagation. The island will be "closer".

So there. :-)

I READ your comments in regard to NPRM98-143. You called
the US amateur radio license a "federal merit badge."

That was in 1998. This year is 2003. 4 1/2 years since.

Many things can happen in 4 1/2 years. Minds can change.
Some minds (of PCTAs) in here go berserk at odd moments.

I am cheered that Phil Kane retains his original conviction
that morse tests should be abolished.

> I may be a competent Morse examiner but a "morseman" I am not.

Not even a little, tiny bit? :-)

Heh heh heh...the pedantic parson is at it again. Once more
a Sermon on the Antenna Mount, denouncing the "evil doers"
(who arrived via black helicopters?).

Can Rev. Jimmie provide ANY further "comment to the FCC"
since the document accepted 13 January 1999? No? I didn't
think so. That's OVER 4 years since, hardly "at length." :-)

>>> Think about all the things Mr. Anderson has expressed his opposition
>>> to. Yes, there's the code test, but that's just the smokescreen.

Of course. "Smokescreens" hide the black helicopters. :-)

>>> Note
>>> how he denies/minimizes the public service contributions of amateur
>>> radio, denies/minimizes the use of Morse code in both the ARS and
>>> other services, and challenges the technical qualifications of
>>> complete strangers based on their code-test views.

Of course, especially those of the certificated pedantry who
work in some industry but spend their off-hours fantasizing
wonderful stuff for their lifestyle. :-)

>>> Note also his
>>> continuous harping about the ARRL and his opposition to the licensing

>>> of young people.

ARRL is to be loved? "Representing" a very distinct MINORITY
of all licensed US radio amateurs. "Representation" by a
smaller minority within ARRL who decide "what is good for US
amateur radio?"

What "opposition to licensing of young people?" Define "young."

In modern American speech "young people" refer to older teens
and those recently past their 18th birthday.

I've never been "against young people." I've been against
CHILDREN, especially CHILDREN only six years old "passing
an amateur examination."

Let's look at the "young people" in here. Are there ANY posting
in here? Not quite. Ryan comes the closest, then Jackie, Brian
(Burke), and some others. Legally, ALL are ADULTS, rather
well past the legal age birthday.

There are a very regular group of OLD FARTS who like control
and dictating who should say what when and where, expressing
an inordinate fondness for the OLD WAYS to the point of
demands to Keep The Status as Quo as Possible because that
is Their Way. Those are all Fortysomething and later.

Those are the regulars. We all know what is synonymous with
"regularity," yes? :-)

Their "childhood" is two things. First, it is a vague nostalgia for
long ago that has morphed into some vague fantasy where They
overcame all obstacles to win triumphant by passing that
enormous hurdle of the TEST, an academic achievement of
momentous proportions. Second, it is still a fantasy, but a
current one, that they believe they are "still young" all the while
keeping up a decided OLD FART appearance in text. Their
physical prowess is unsurpassed, their intelligence keen as any
Nobel recipient, they know more and have done more than any
of "lesser" certification than They according to their texts.

>>> Guess who wrote the following, in reference to young people in amateur
>>> radio - specifically young people using Morse code on the air:
>>>
>>> "I've always had trouble with integrating "youngsters" in what is a
>>> primarily _adult_ skill/technique recreational activity."
>>>
>>> Just the kinda person you want setting entrance requirements, huh?

>I recall the exchange where Hans told us about his 14-year-old

>age-requirement
>idea in his comments to the FCC. Comments that were filed long after the
>comment period had ended, when FCC was supposed to only be getting reply
>comments.

Error. Error. Error. My comment on NPRM 98-143 was/is on
the FCC public database as having been received on 13 Jan 99.
[it was received earlier than that, sent by registered USPS mail
the first week in January 1999, paperwork still here]

The Comment period end was 15 January 1999 according to
the FCC by their extension. That was for ALL comments
AND replies.

Please do not put wrong words into the FCC. Their statements
are in public view.

> That was during the period when he was referring to you as a
>"convivial stormtrooper from central africa" and asking about your boots and
>armband being too tight. He also stated that the parents of some young hams
>had "conned the VEs into passing" the kids, or some such.

In my opinion, the big RFI from State hasn't changed a bit.

In my opinion and that of several others, SIX YEAR OLDS
passing a WRITTEN test is a JOKE.

>>> Note particularly that his focus is always to MINIMIZE amateur radio,
>>> and attack its accomplishments, traditions and institutions, rather
>>> than to become part of it, or even to express a positive vision of its
>>> future.

Oh, my, the pedantic parson is getting white knuckles gripping
the pulpit rim! :-)

My "focus" is on MINIMIZING the would-be controllers and
dictators of a hobby activity who demand Their Version of a
hobby to be the Model for all others to emulate (because they
are so damn good, noble, fine and true according to their own
words). They can't take it. Tsk, tsk, tsk.

The parson cannot see "positive" attributes that He did/does
not want. He wants things His way. What is curious is that
that way is how amateur radio was before his birth.

Not so curious is that such a syndrome is common to the
PCTAs. Hold the Old seems to be their only "future."

>>He attacks the ARRL but he isn't a member.

Ah, one must "love" ARRL, Church of St. Hiram or be
considered a blasphemer, a heretic.

Tsk, tsk, tsk, ARRL is a political entity, not a religious
institution. Political entities are fair game in America, a

"tradition" far older than radio.

ARRL is only the remaining survivor of many original
organizations that attempted to "represent all of US
radio amateurs." It was a distant second to the Radio
Club of America...which still survives but does not favor
only amateur radio.

>He knows that without ARRL, ham radio would have been slowly legislated out
>of existence.

Error. Error. Error. NO ONE can predict OR prove an
alternate universe. A number of different things happened
in USA radio by 1920 and ARRL is a minor thing in all
that. St. Hiram did go to Washington, DC, at his own
expense, but He did not miraculously "straighten out" the
lawmakers nor "chart any future."

>> He attacks radio amateurs
>>and their accomplishments but he isn't a radio amateur.

Tsk, tsk, tsk, another error. The pedantic parson is NOT
representative of all US amateur radio. The dill sergeant is
NOT representative of all US amateur radio. The robust
oberst is NOT representative of all US amateur radio. The
bus driver is NOT representative of all US amateur radio.

Those wonderful "examples" of the hobby love to shoot
down others not agreeing with them and their wonderous
"accomplishments." THEY get "attacked"...because They
DESERVE it for trying to deride and denigrate their
opponents in discussions of the future. They can't take
discussions on subjects, so they act the way they do.

>Doesn't want to be, either.

That's not on a list of immediate priorities...:-)

>>> IOW, he'll tell you what he's against, but never what he's for, or why
>>> he's so interested.
>>
>>That's an easy one. He is interested because "amateur radio is a fun
>>hobby" though how he knows that is beyond me.

Many things are "beyond" the pedantic parson. :-)

>>I don't understand how
>>one can claim interest in something for decades without bothering to
>>pursue participation or how claimed interest results in the bad-mouthing
>>of a large group of existing participants.

"Large group?!?" Of THESE regulars?!?!? :-)

Many things in life are INTERESTING. NO ONE needs any
license or certificate or title to BE INTERESTED. Considering
that RADIO, the whole world of radio, not the small slice that
is a recreational, hobby activity, is great, diverse, full of
innovation and invention, and very, very interesting.

When we get to the OF group of regulars (parson, oberst, dill
putzman, driver), ALL must do "fun" as They do fun...or it
isn't "fun" according to them. All must be licensed, titled,
certificated, wallpapered according to strict regimental
protocol that They require to be enforced...enforced by any
means possible.

>It's simple, Dave. His "interest" is the desire to damage, erode and
>ultimately destroy amateur radio.

The amateur Osama bin Laden describing his "opponents."

Tsk, tsk, tsk, the pedantic parson is reaching for the Fire
and Brimstone!

>Cutting out the young folks is one way to do that.

Good grief! The pedantic parson thinks I hang around grade
schools threatening six-year-olds?!?

The parson slipped on too many pulpit boxes. He's flipped
too much fire and brimstone, lost his mental perspective in
His Image of Amateur Holy Orders!

>Stirring up arguments and hostility over what has become a non-issue (code
>testing) is another.

A "non-issue?!?" The daft parson doesn't realize that the
"code issue" is NOT YET RESOLVED. WRC-03 is a few
months away.

>Championing the use of a big-yet-inefficient antenna like the WBFD is
>another Imagine if lotsa hams used 'em....

??? WHO "championed big-yet-inefficient antennas?"

The pedantic pulpit-pushing parson has been quaffing too
much sacred wine?!?

>Now we'll be treated to another bunch of his posts full of name-calling,
>factual errors, misquotes, faulty logic, and just plain insults. So typical.
>The "Reverend" nonsense is a bit surreal, considering my religious beliefs.

Parson, you are a Holy One of the Church of St. Hiram.
A Believer, almost a fedayin when it comes to amateur
radio. You will take any opinion against the Sacred Words
of that Church of St. Hiram as heresy of the highest horror.

Tsk, tsk, tsk, if ARRL wrote "2 + 2 = 5," the pedantic
parson would say that the corrected expression of

"2 + 2 = 4" is an error! :-)

What next? Will the parson form a posse and burn an
ARRL diamond on my front lawn?!? :-)

>What "opposition to licensing of young people?" Define "young."

What a hoot. Suggests tot he FCC tha an age limit is required for Amateur
Radio licensure and then tries a STUPID dodge like this.

Putz.

>In modern American speech "young people" refer to older teens
> and those recently past their 18th birthday

And in how many presentations have YOU discussed "young people", Lennie?
I am only 47, and to me "young people" refers to children and teens. Of course
I DO work with kids EVERY DAY.

>I've never been "against young people." I've been against
> CHILDREN, especially CHILDREN only six years old "passing
> an amateur examination."

Why? YOU don't have one against which we could use as a milestone, so what
does it matter?

And PLEASE show us where these six year olds have been an ENFORCEMENT
problem...!

> There are a very regular group of OLD FARTS who like control
> and dictating who should say what when and where, expressing
> an inordinate fondness for the OLD WAYS to the point of
> demands to Keep The Status as Quo as Possible because that
> is Their Way. Those are all Fortysomething and later

"Keep The Status Quo"...?!?!

That's funny. NO ONE in this forum that responded to 98-143 suggested
"don't change a thing".

NOT A ONE, Your Lyingness.

>>I recall the exchange where Hans told us about his 14-year-old
>>age-requirement
>>idea in his comments to the FCC. Comments that were filed long after the
>>comment period had ended, when FCC was supposed to only be getting reply
>>comments.
>

> Error. Error. Error. My comment on NPRM 98-143 was/is on
> the FCC public database as having been received on 13 Jan 99.
> [it was received earlier than that, sent by registered USPS mail
> the first week in January 1999, paperwork still here]

The FACT is that YOU told the FCC that YOU thought an AGE LIMIT was necessary for the Amateur Radio service.

It's never been a problem before...it's not a problem today, and it's UNLIKELY to be a problem in the future.

>In my opinion and that of several others, SIX YEAR OLDS
> passing a WRITTEN test is a JOKE.

Kinda like your assertion that YOU would get an "Extra lite out of the box" was a joke, Lennie?

THEY did it...YOU haven't. So who'd the clown now?

>My "focus" is on MINIMIZING the would-be controllers and
> dictators of a hobby activity who demand Their Version of a
> hobby to be the Model for all others to emulate (because they
> are so damn good, noble, fine and true according to their own
> words). They can't take it.

Ahhhhh! Lenie wants to be IN CONTROL!

ANOTHER LIE EXPOSED BY HIS OWN HAND!

Until now, Lennie's "claim" was "only to elimitnate the Morse Code test".

Now in clear English he finally admits to his agenda!

This is NOT about the "Morse Code test"....It's jsut as I said all along...Lennie got his feelings ruffled at some point by Amateur Radio in general or some Ham in particular, and now he's ON A MISSION!

>Many things in life are INTERESTING. NO ONE needs any
> license or certificate or title to BE INTERESTED. Considering
> that RADIO, the whole world of radio, not the small slice that
> is a recreational, hobby activity, is great, diverse, full of
> innovation and invention, and very, very interesting.

But in order to PARTICIPATE in Amateur Radio, one NEEDS a license. Otherwise one sits on the sidelines...JUST LIKE YOU!

>>It's simple, Dave. His "interest" is the desire to damage, erode and
>>ultimately destroy amateur radio.
>
> The amateur Osama bin Laden describing his "opponents."

You got that wrong, Lennie...He was describing the Osama Bin Laden >of <Amateur Radio...Which would be YOU.

>>Cutting out the young folks is one way to do that.
>
> Good grief! The pedantic parson thinks I hang around grade
> schools threatening six-year-olds?!?

I think you hang around six year olds offering them candy and offering them a ride in your car, myself.

>The pedantic pulpit-pushing parson has been quaffing too
> much sacred wine?!?

You really ARE scrambling to dig yourself out of this, aren't you, Your Scumminess?

>What next? Will the parson form a posse and burn an
> ARRL diamond on my front lawn?!?

Burned a cross or two in your day, have you Lennie? You seem fixated with the idea......

Steve

I should of read the article a little better, I just skimmed through it in a hurry. I agree here Ross, but make a mention of what you say anywhere else and you be labled a "conspiracy wacko): We need Col Steve Anderson on the air.

You missed the point, Steve. Mr. Anderson claims that others have
tried to silence him, yet it is he who tries to silence those who
disagree with him.

> >>Is the above untrue? I don't see how it's an insult. I lack skill in flying

Well, there you have it.
>
> >A 234 foot long dipole is NOT a pretty sight in a residential
> > neighborhood.

Now we see a glimpse of Mr. Anderson's actual mission, Steve. He
doesn't want to see amateur radio antennas. Perhaps that's why he
wants amateur radio to go away.

The interesting part is that my comparisons are between a WBFD and a
dipole of equal size. If anything, a WBFD is even more visually
apparent than a plain dipole.

A 165 foot WBFD was modeled by W4RNL and is shown to have at least 7
dB of loss in the resistor. Which means it radiates less than 20% of
the RF fed to it as RF.

> > Go take your 2 MHz dipole out in the
> > country.
>
See what I mean? He wants to force us hams into only a few areas.

Some weeks back, I saw a really nice house for sale in my
neighborhood. 4 BR/2-1/2 bath colonial on a flat 1 acre with big
trees. No antenna restrictions that I know of. A 160 meter dipole
would have fit nicely on the diagonal, and been oriented N-S to boot.
Wire would be hard to see for the trees, too. And I sure don't live
out in the country.

Of course a dipole would not be the preferred antenna for 160 DX
anyway unless you could get it up really high.

One wonders what Mr. Anderson would like to see happen to the N2EY "antenna farm". Just a homebrew multiband trap inverted V, with the feedpoint supported by some RS TV mast on a gable end, and the ends in some convenient trees. Coax fed, covers 80/40 CW without a tuner and all bands with a little help. Feed efficency is acceptable because the coax is kept short. Neighbors don't even notice it. To me it's beautiful, 'specially at time like this morning. Snow drifting down and the sun rising over my town as I come down the street from an early-morning run.

But I suppose such things are unacceptable to Mr. Anderson.

Didja notice that Mr. Burke hasn't made a peep about his end-fed yet?

> A matter of opinon. I think seeing my neighbor's wife walking to the
> mailbox in robe and curlers is far more offensive than any antenna I have EVER
> seen.

All depends on the neighbor. Now if your neighbor looked like Heidi Klum, with a VS robe.....

Enforcement is the answer. Get out the recorders, bust a few booleggers, and the problem will start to go away. Registration of radio equipment is bogus and unconstitutional.

What about homebrew tx equipment? I can see it now. A knock on the door late at night... Uncle Ned being led away in chains for the crime of building a Rock-Mite.......

Gee, thast's funny. I did a word search on my copy of the comments
AS SUBMITTED and the phrase "merit badge" never was used. That may
have been your inference but it was not my implication.

What have you been reading?
>
>> I may be a competent Morse examiner but a "morseman" I am not.

> Not even a little, tiny bit? :-)

Do I know Morse code? Yes. Is it the be-all and end-all of
amateur radio? No. Should examinations in Morse code
proficiency be a required part of the amateur radio license
examination? I believe not.

It's that simple.

Shame, shame, parson! "Putz" is not a middle-European pejorative of ethnic Jewish origin, it is a standard title

bestowed upon the non-amateurs by Hostile Action Heroes.

It's best counterpart might be "goyim." :-)

>You missed the point, Steve. Mr. Anderson claims that others have
>tried to silence him, yet it is he who tries to silence those who
>disagree with him.

Of course. My production lines are going three shifts to
manufacture Black Helicopters...whop, whop, whop, to overfly
all amateur radio antenna farms. Of course. :-)

>> >>Is the above untrue? I don't see how it's an insult. I lack skill in

Tsk, tsk, tsk. Parson pens pernicious persiflage in petulance.
:-)

>> Kinda like
>
>(Mr. Anderson)
>
>> seeing his own words repeated back to him in
>> threads highlighting his own newsgroup misdeeds...?!?!
>
>Maybe.

Parson has "doubts?!?" How can that be? Parson = Perfect.

Tsk, tsk, tsk...pedantic parson's postings are always TRVTH
for they are from the good book of the Curch of St. Hiram.
That church as no doubts for they commandeth and define

what is TRVTH. :-)

>> No...Nothing at ALL like it...Jim Miccolis' posts are factual.
>> Leonard H. Anderson's are not.
>
>Well, there you have it.

"Calm presentation of actual quotes, facts, and opinions
without using pejoratives, name-calling, is 'coming unglued.'"

Tsk, tsk, tsk. Bad glue, hold, hold, dry in the corner until
there is courage to confront opponents directly instead of
through intermediaries who use "putz" as part of their
everyday speech. :-)

>Now we see a glimpse of Mr. Anderson's actual mission, Steve. He
>doesn't want to see amateur radio antennas. Perhaps that's why he
>wants amateur radio to go away.

Tsk, tsk, tsk. Delusional again. Sacramental wine tippling?

Poor reading skills due to too much late-night DXing the rare
ones? Slip on the ice during the "5 AM run" and confuse the
cerebrum?

>The interesting part is that my comparisons are between a WBFD and a
>dipole of equal size. If anything, a WBFD is even more visually
>apparent than a plain dipole.

There you have it, the Final Word from a J. C. Maxwell, Jr.

>A 165 foot WBFD was modeled by W4RNL and is shown to have at least 7
>dB of loss in the resistor. Which means it radiates less than 20% of
>the RF fed to it as RF.

There you have it, no personal analysis, no application of
the much-vaunted MSEE skills, just a quote of what Cebik
wrote elsewhere.

This could be taken to rec.radio.amateur.antennas, but that
would result in a Loss of Pulpit Venue! :-)

>> > Go take your 2 MHz dipole out in the
>> > country.
>>
>See what I mean? He wants to force us hams into only a few areas.

The peripathetic pedantic parson personifies perfidy with
his "calm presentation of actual quotes, facts, and opinions
without using pejoratives" but using false, misleading, and
perjurous attempts at character assassination based on
imagination, supposition, and inability to handle opinions
contrary to His. Tsk, tsk, tsk.

>Some weeks back, I saw a really nice house for sale in my
>neighborhood. 4 BR/2-1/2 bath colonial on a flat 1 acre with big

Oh, my, how lovely. My wife and I might consider a bid on our
northern house on the Kitsap Penninsula in Washington state.
10 acres, evergreens 60 to 80 feet high (approximately). Nice
for small rhombics. :-)

>Of course a dipole would not be the preferred antenna for 160 DX
>anyway unless you could get it up really high.

Wait a while...all those evergreens are still growing up in WA
state... :-)

>One wonders what Mr. Anderson would like to see happen to the N2EY

Oh, my, pedantic parson perpetuates poetry! :-) How nice...

ADA's Camp Tomlinson ("Kashiwa") transmitter site was on a
former airfield about a mile long and half-mile wide, full of
wire antennas...including barracks, mess hall, etc. B Company
of FEC Sig Svc Bn lived there, working around the clock to keep
the messages flowing out. I would imagine the parson popping
his pomegranete living IN an antenna field and being able to do
"his morning run" WITHIN the antenna field. :-) We of B Co.
did. No snow, though.

>But I suppose such things are unacceptable to Mr. Anderson.

Been there, done that. Long time ago. :-)

>Didja notice that Mr. Burke hasn't made a peep about his end-fed yet?

Poor baby. Disappointed?

Tsk, tsk, tsk...how gauche, how plebian to use "simple, totally
unacceptible antennas" not blessed by the amateur nobility!

>> A matter of opinon. I think seeing my neighbor's wife walking to the
>> mailbox in robe and curlers is far more offensive than any antenna I have
>EVER seen.
>
>All depends on the neighbor. Now if your neighbor looked like Heidi

>Klum, with a VS robe.....

Tsk, tsk, tsk. Take this to the alt.rec.covet-thy-neighbor's-wife
newsgroup. Besides, all know that Dill Sergeant Putz has
orgasmic dreams of Morgan Fairchild and Phyllis Diller! :-)

Four loose-leaf notebooks full of print-outs from the FCC ECFS,
FCC NPRMs, R&Os, and other documentation concerning
NPRM 98-143 et al.

I stand corrected and the phrase "federal merit badge" was my
intepretation of your 30 November 1998 Comment on 98-143
which was "essentially a prize-awarding system, where
personal status is conferred by the grade of license."

I used that quote on page10 (of 14) in footnote 22 of my
Comment on 98-143 stamp-dated as "received Jan 13 1998"
and "received Jan 13 1999" (actual year was 1999 and a
mistake by the FCC mail room as noted on the copy
available for public view from the ECFS).

"Essentially a prize-awarding system" is rather descriptive
by itself. That is essentially what Boy Scout merit badges
are once the emotional loading of scouting's "good works"
and "teaching" phraseology is removed.

"Personal status" is another phrase part that can stand by
itself to denote class and the (again) emotional result of
class distinction.

No problem with that here. I'll log Phil Kane as being consistent
in that view up to, and including 8 February 2003.

Others' comments, particularly the PCTA's, are FAR from
simple! :-)

1747. Minimum Age Requirements for US Radio Amateurs

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-07 21:02:15 UTC
From: lenover21@aol.com
Message-ID: <20030207160215.10456.00000263@mb-ma.aol.com>
Source record: 60830

There's been a lot of biased remarks categorized as myself "trying to destroy amateur radio for young people" which need to be cleared up for the record. Over four years ago I wrote the following in a Comment on NPRM 98-143 (page 12 of 14) which is in the public record:

"A COMMENT CONCERNING THE MINIMUM AGE OF A LICENSEE"

"The ARRL Letter, afeature of the ARRL Web site, carried a news story about the 'two youngest hams' who were licensed at age four. [footnote 24] There isnothing in the existing Part 97 regarding age of a licensee or a prospective amateur. It is this writer'sopinionthat thereshould be a minimum age."

"Anyone taking an amateur radio test should be literate. Further, examinees and licensed amateurs should possess sufficient reasoning of regulations that they will operate responsibly. Itleaves this writer in a state of incredulity to suppose that FOUR YEAR OLDS have sufficient reading capability, sufficient understanding and responsibility to be granted a radio license in any radio service. Regardless of familial claims of abilities, it should be clear to any adult that four year olds do not possess enough maturity to operate radio transmitters sending signals internationally or with possibility of interference to communications in other radio services. It cannot be excused that these CHILDREN will be operating under "parental supervision." Nothing in the existing Part 97 regulations covers "parental supervision" of very young amateurs. CHILDREN are simply too young, too immagure to be entrusted with the responsibility of lawful operation of radio transmitters."

"It is suggested that a minimum age of amateur radio license examinees be limited to at least age 14 or older, any license class. [footnote 25] Proof of meeting minimum age limit would be shown to the examining VE team. Exact age would not be required to be submitted to the FCC, responsibility would be put on the VE test team to state to the FCC that an examinee met the minimum age requirement."

Footnote 24: "ARRL Letter of March 20, 1998, Volume 17, Number 12. The two 'youngest hams' were licensed as KB9RYP (Samuel Lewis, Technician Plus) and KB9SEG (Sarah Bruno, Novice) in late February 1998. The ARRL Letter text indicated that their siblings and parents were all

licensed in various amateur radio classes."

Footnote 25: "Most states have a minimum vehicle driving license age of 16, usually as a "Learner's Permit" or similar. Vehicle driving has a direct possibility of causing injury to others. Radio transmitters do not have such a direct effect on public safety but, irresponsibly operated, a transmitter could cause interference to radio navigation aids or emergency radio signalling devices. Federal Air Regulations allow children to pilot certain aircraft types but only under the direct supervision of an adult at the controls."

That comment was responsible for some to take to pulpits of righteousness and state condemnation of "keeping youth out of ham radio!" Yes, FOUR-YEAR-OLDS. CHILDREN. CHILDREN at age 0 through ENTRANCE to teen years.

Most of those in this newsgroup who got interested in ham radio as teen-agers did so at around age 14. That age is TEN YEARS PAST the ages of Samuel Lewis and Sarah Bruno. Ten years to become literate through public school, to be able to read written regulations with at least some understanding. Age 14 is two years past "entrance to teen years."

I wrote the quoted material on a Comment to NPRM 98-143 (indicated received 13 Jan 1999) and that is a publicly-available document in the FCC files. One of the righteous in here levelled the accusation of "continually harping on the subject." I do not, only to do counterpoint to others' off-tuned harps where they, looking for some "attack point" want to dwell on four-year-old public material.

If the barring of CHILDREN is somehow the "death and destruction of amateur radio," then a number of the righteous in here have lost touch with reality. 30.

Although there may be some merit in the "4-year-old" case, I don't believe that 14 is a proper age floor. The question of understanding and maturity is an issue that should be based on facts and circumstances of each individual and cannot be answered simply by age.

Some three years ago, the VE team that I work with had a 9-year-old girl pass her EXTRA class examination (and that was when 20wpm was in effect too). Am I to believe that in her case and despite passing the examination, she doesn't know what she's doing? Granted that this only proved technical knowledge and not maturity, but in the converse situation, there are plenty of 21+ year-olds who JAM and otherwise violate the rules, thus showing their lack of maturity.

In Los Angeles County, on the 147.435(os) repeater, a "jamfest" is in progress. You have the control operator codes. What should you do?

a) Do nothing.
b) Use the control codes to turn the repeat function off.
c) Identify the jammers and report them to the local FCC field office.
d) Key up on top of them and repeat the 7 "naughty words" until they stop.

Select the BEST answer.

>14 is a proper age floor.

Then make it 12. Age 12 has thrice the life experience of a
four-year-old, is of the common age of leaving grade school
and entering middle school.

I put in a numeric value four years ago as fitting the observed
entrance age of long-timers in here. It's not an absolute, never
was...yet some in here will spend hours and hours of pointless
writing denouncing it as absolute! Not you, Dieter. :-)

>The question of understanding and maturity is an
>issue that should be based on facts and circumstances of each individual and
>cannot be answered simply by age.

There's NO requirement in Part 97 for all VEs to possess any
psychologist training to assess maturity or responsibility of
examinees. There hasn't been any movement to revise Part 97
to include that. Yet. :-)

Privatization of ALL radio operator licenses doesn't have any
"psychological assessment regulation" and that applies just
as much to COLEMs and VEs. Should there be one? I just
put that as a question.

There is NO age limit now. There might be some cutesy future
ARRL Letter squib about "world's youngest ham" of age three.
First of all, no one can possibly doubt ARRL's inherent, implicit
honesty in all things amateur. To do otherwise would be heresy
and call for some kind of capital punishment.

>Some three years ago, the VE team that I work with had a 9-year-old girl pass
>her EXTRA class examination (and that was when 20wpm was in effect too). Am
>I to believe that in her case and despite passing the examination, she doesn't
>know what she's doing?

I don't know this girl's level of anything other than your statement
about being able to pass the test. That is what matters for legal
licensing grants.

What if the girl was only four? Or three? Or five? Or six?

That amateur license gives the licensee the right to operate a transmitter according to regulations. That's all it does. There's NO requirement for any parental supervision while using the license for transmitting.

There's no metaphysical, spiritual, or divine force to make ANY licensee operate maturely or responsibly...just as there is nothing but a statement of proper operation in regulations. What exist in here are a lot of self-styled, self-propelled radio cops who assume a mantel of "authority" when such authorization is no more than the fire in the fireplace below the mantel (their mantle is invisible). :-)

>Granted that this only proved technical knowledge and
>not maturity, but in the converse situation, there are plenty of 21+
>year-olds
>who JAM and otherwise violate the rules, thus showing their lack of maturity.

That applies to fortysomethings and fiftysomethings, too. Some of those are licensed to the max. Considering they are adults, what do you think would happen if children got to play in radioland just as freely?

Note: Children can and do "play in radioland freely" now with the availability of cheap FRS handy-talkies license free. Those have limited output power and are UHF. A Tech Plus or higher-class license allows much more power output and lower frequencies which can reach out across national borders.

The FCC "bandies about" a number of US amateur radio
regulations yet no staffer or commissioner is required to
be granted an amateur radio license. :-)

A great number of Americans "bandy about lofty opinions"
about US national politics yet hardly any of them are IN
politics or even consider seriously entering politics.

Consider that "lofty" (or basement) opinions about
getting into US amateur radio don't require that anyone
be IN amateur radio as in already being licensed. They
don't need to "care."

Would you seriously consider a four-year-old child as a
"member of a ham fraternity/sorority" on an equal basis
with your own activities in ham radio? There is NO legal
bar to age. Reducing this to the absurd, it is quite
possible for a newborn to be "granted a ham license." :-)

There, more food for the other players in this Theater of
The Absurd to comment amidst shouts of explitives
about "not having the right attitude." :-)

I also like the lowering of GOTA station contacts for bonus points. My guess is that not too many groups got that bonus last year. The new folks tend to work a lot slower.

The important question is: What problems has the lack of an age requirement for
an amateur license caused? The FCC and its predecessors have been licensing
hams for over 90 years now, and there has never been an age limit. Mr. Anderson
does not give a single example of the youth of a ham being the source of any
problems for the ARS or other radio services.

>The question of understanding and maturity is an
>issue that should be based on facts and circumstances of each individual and
>cannot be answered simply by age.

Agreed. It should also be noted that FCC does not require an understanding of
the material on the tests - just enough correct answers, in a test session
conducted according to the rules. The written tests have been multiple-choice
for at least 42 years, btw.
>
>Some three years ago, the VE team that I work with had a 9-year-old girl pass
>her EXTRA class examination (and that was when 20wpm was in effect too). >Am
I
>to believe that in her case and despite passing the examination, she doesn't
>know what she's doing?

Of course she knows what she's doing - at least as much as the test methods
allow that to be determined. The real test is how she behaves on the air. Any
problems you know of?

Mr. Anderson, however, thinks that no one under the age of 14 can possibly use
an amateur radio transmitter of any kind in a responsible manner, and so no one
under that age should be licensed, regardless of qualifications demonstrated.

But it gets worse: He claims that the parents of the 4 year olds "conned the VEs", and in another example, accused the ARRL and the VE team of "very mild fraud". (Exact google quotes provided on request).

btw, the youngest Extra that I know of got that license at age 8, back before restructuring. Good operator, too - I know that from first-hand experience.

>Granted that this only proved technical knowledge and
>not maturity, but in the converse situation, there are plenty of 21+
>year-olds
>who JAM and otherwise violate the rules, thus showing their lack of maturity.
>
EXACTLY!!

Now if there were a problem with sub-14-year-old hams breaking the rules, perhaps age limits would be a good idea. However, the opposite seems to be the case.

Mr. Anderson has every right to suggest things to the FCC, just like any other citizen. No one denies that.

However, accusing VEs of dishonesty without any evidence is pretty serious stuff.

He also seems to have a problem tolerating opposing viewpoints.

GOOD QUESTION!!!!

I'm debating between b) and c). I'll say b), because it stops the violation now. c) is good, but you also need a method of positively identifying the jammers and recording their jamming. OTOH, shutting down the repeater may simply cause them to go elsewhere.

I've done some searching, but can't find an answer to this question.

I was issued WA3URR in 1974, but stupidly let my license expire.

After re-testing back up to Extra class, I received KA3STE--OK but it isn't me!

Will the FCC re-issue original call signs? I did a search and WA3URR is not currently issued.

Jeez, I hope not. The way my 5 yr. old is going, I see her as a General by approx. age 8. She's made a game of the code and is doing really well with her reading skills in kndergarten and at home. Imagine that...a young person actually having Morse code!

Common sense dictates that she wouldn't operate unsupervised, but it'd sure make a pretty cool father/daughter activity. She's already fascinated by QSL cards.

You would have to apply for it as a vanity call. It is highly likely that
they would then grant this application unless someone else has requested it.

What's the point of this? EOC stations are usually full-blown stations with high power capability, good antennas, and all the coffee and donuts you can consume. What does operating from one of these stations prove from a standpoint of true emergency communications capability? The operators at EOC's are usually the most obese, chain-smoking, technically incompetent and personality-challenged hams you'll find on-the-air. AFAIC, giving them their ever-so-appropriate "F" (for Failure) category is a good idea -- so us guys out there in the field will know who to avoid! However, if they add a rule stating that any EOC-station must change operators at least every four hours, and are not permitted to use HF SSB, then I'd begin to see some value to this category.

Dave:

You are correct. Your old call sign, WA3URR, is available and you can request
it as a Vanity Call Sign as long as somebody doesn't beat you to it first
(which is unlikely).

BTW -- I wonder why you were issued KA3STE if you upgraded to Extra? Did you
receive that call sign as a Technician, and just elect to keep it?

Hmm, the name Richard Jewel comes to mind. Remember the security guard in Atlanta who discovered a bomb and warned people away, probably saving a dozen lives. The FBI destroyed the man in an attempt to convict him of placing the bomb. They got him fired from his job, destroyed his reputation in the community by releasing false stories about him, and even tried to get his family to turn on him. The real bomber is still on the loose and went on to bomb two more establishments while the FBI ignored him and went after the innocent.

And now we also have all the death row prisoners who have been released since the advent of DNA evidence. Yea, right, if you havent done anything wrong, then you have nothing to worry about. Now that is one ignorant statement!

There used to be a minimum of 14 in the UK, but it was abolished. In theory anyone who can pass the test should be allowed to operate. I have some trouble beleiving that 4-year olds could genuinely pass, but I suppose it might be possible. I knew one girl who was licenced at 7, a 20 wpm extra at 9, and then designed and built a 2m quad for the school science fair when she was 11, but she was probably smarter than Len! 7 would be a better minimum than 14, but why bother atall. Most kids have a hard time saving up for kW linears from their allowance anyway.

The individual addressing whether children are too "immagure" to obtain
an amateur radio license write the following elsewhere:

quote Tsk, tsk, tsk, another error. The pedantic parson is NOT
representative of all US amateur radio. The dill sergeant is
NOT representative of all US amateur radio. The robust

oberst is NOT representative of all US amateur radio. The
bus driver is NOT representative of all US amateur radio. unquote

There is one fact here which is absolutely beyond dispute: Leonard H.
Anderson is NOT representative of any or all U.S. amateur radio. Aside
from that, he is simply too "immagure".

> "It is suggested that a minimum age of amateur radio license

> CHILDREN at age 0 through ENTRANCE to teen years.

Yep. Nine-year-olds, eleven-year-olds, twelve and thirteen-year-olds
would be excluded if your comments were favorably acted upon by the
FCC. Since there is no history of problems with young licensees and
since there has never been a lower age limit in U.S. amateur licensing,
what's it to you?
>
> Most of those in this newsgroup who got interested in ham

> understanding. Age 14 is two years past "entrance to teen
> years."

When I was a fourteen-year-old Novice licensee in 1963, QST carried the story of a twelve-year-old who had passed the amateur Extra. That was back in the day when one had to hold a General Class ticket for two years before being able to take the Extra Class exam. Age 10 is two years prior to the "entrance" to teen years.

> I wrote the quoted material on a Comment to NPRM 98-143

> off-tuned harps where they, looking for some "attack point"
> want to dwell on four-year-old public material.

You don't really need to continually harp on the subject. You sent your views directly to the FCC. Thankfully, FCC reaction to your idea was....silence.

> If the barring of CHILDREN is somehow the "death and
> destruction of amateur radio," then a number of the
> righteous in here have lost touch with reality. 30.

If you see the barring of CHILDREN who are not now prevented from obtaining an amateur radio license, as a good thing, you've lost touch with reality. Numerous countries like the U.K. and Finland which formerly had such lower age limits in amateur radio licensing, have dropped such requirements. If you ever act on your decades long "interest" in amateur radio, you'll likely have to share the airwaves with CHILDREN.

Thanks for clearing up the record. It looks just like it did before and my reaction to it is much the same.

Nor is it about regular-vs-conscripted Army service in the 1950's, SINCGARS, IEEE-vs-ARRL, or a host of other topics that YOU rail on about at length. Nor is it about your rear-area war hero exploits, nor is it about the characteristics of the AMA -vs-ARRL. Again, other "topics" that you find "appropriate" for the forum.

>The peripathetic pedantic parson...(SNIP)

...has pretty well nailed you down. He's much more civil about it...I just think you're a demented little troll, caught up in your own incredible web of deceit, lies and failures.

"Putz", for short.

There's nothing biased about it, and your re-posting of your 98-143
comments does NOTHING but lend even MORE creedence to those who find your idea
repulsive.

It still comes down to two things: (1) is there any evidence that these
persons obtained thier licenses fraudulently or with inappropraite assistence
from the Examiners, and (2) is there any evidence that these persons have posed
an enforcement issue?

>"It is suggested that a minimum age of amateur radio license

So....just because many Amateurs enter Amateur Radio at age 14, we should
codify that as the defacto minimum age, entering yet another law on the books
for a "problem" that's never manifested?

Lennie, rather than force your aspurgences on Amateur Radio, why don't you
just spend the rest of your waning years authoring more laws for problems that
DON'T exist...?!?!

Putz.

Hey Ken,

Good to see you again! Heard you check in on 7255 last night.
Looks like Mr. J at the FCC and the rest of his friends at the
Commission are up to their old lies and devious tricks again. And
they need another lesson in honesty and good government ethics
again. Apparently they learned little from their last trip to the wood
shed. Email me at my yahoo.com address and will bring you up
to date.

As far as I know -- ur old call (if available) can only be re-issued as a vanity call. Provided your present license class is within the proper alloted blocks. So you are eligible for WA6URR vanity.
See http://www.arrl.org/arrlvec/vanity.html

Many here in San Diego that I know have done this.

And an issued call can be shortened with a vanity (KE6JXY a tech can not get K6XY (extra) but could get K6JXY) with out an additional exam.

Larry,
I've had a good search through VanityHQ and can't find where the availability of WA3URR is addressed. I examined the data base under the "call availability" link, but only see WA4URR. Perhaps if a call is not explicitly shown as being invalid or unavailable, it is available.

Regarding KA3STE: I received that call as a novice in 91 and think I elected to keep it when I was issued an extra-class license in 93. IIRC, I didn't want a call with an "A--" prefix.

It is was only recently that I decided to seriously pursue my old call.

You can check for callsign availibility at any of the following as I believe
they are updated daily from the FCC data base. WM7D' site is.
http://www.wm7d.net/
http://www.qrz.com/
http://www.buck.com/cgi-bin/do_hamcall

Or go to the FCC site -- good luck on weeding thru it

The whole episode is a non-issue when you dig in to the facts Mopar.
I've contacted several people directly involved and sorted out the
facts for myself. Twisted hasn't been completely truthful in his posts
it seems. Yes there where recordings of N8, however the recordings
where of him chewing out several other Hams on the repeater for
routinely causing interference, and his "strongly worded opinions"
about the lack of action by the control operator(s) to correct the
problem. Apparently one of the Hams involved in the interference made
those tape recording in an attempt to cover his behind, and tried to
get N8 to back off on his complaints, by sending them in to the FCC.
If N8 is really guilty of anything its trying to clean up an existing
problem on the Ham band in his local. This is something any really
concerned Ham would do, a bit of self policing action where we try to
clean up our own mess first before the FCC has to step in and do it
for us. As far as I can tell there isn't going to be any action taken
against N8 by the FCC.

I have no problem with your five-year-old. You must have realized that many, many things fascinate children and few of those fascinations take root and hold all the way to adulthood. What fascinates your daughter right now may not be the case in six months or a year.

>Common sense dictates that she wouldn't operate unsupervised, but it'd sure >make a pretty cool father/daughter activity. She's already fascinated by QSL >cards.

"Common sense" may be apparent to an adult. It is not yet fully learned by children. "Common sense" doesn't "dictate" anything...it is just a common assumption. It may or may not have to be "worked into" a child (by backside) depending on the particular case.

As children grow into teen years they begin to resent parental supervision over "their" activity. Every such case is different and must be handled appropriately...there is no one way to do that which will work every time.

Heh heh heh...I'm not 90, either. Ahem...it is 91 years...1912. See
Thomas H. White USA radio histories on the Internet. Interesting
stuff, not limited or biased as comes out of a small city near Boston.

Parson, better stand away from the pulpit a bit further. Church
committee is complaining about the teeth marks you put there...

Why does there "have to be a problem" to streamline and reduce
federal regulations in anything?

There are more radio amateurs in the USA now than 90 years ago.
They have HF and higher power capability, relatively easy-to-use
controls compared to 85 years ago. Did anyone talk about "skip"
80 years ago? No? :-)

Trying to make the entire US amateur radio environment "the same"
now as it was in the beginning is nonsense. Too many things have
changed, improved, gotten easier to use. Spark has been outlawed

long since and vacuum tubes are on their way out of most radios and electronics. The types that remain in new products are magnetrons in microwave ovens (a few dozen million or so), TV and computer monitor display CRTs still operating before being replaced by TFT and Plasma and LCD screens, photomultiplier tubes in optical physics, and some RF power amplifiers (but not all).

Should radio amateurs have been thrown off MF in the US in the 1920s? Amateurs would have said, "of course not, we never 'caused any trouble!'" [they did, but ARRL won't tell that side of the story] "Spark never caused any trouble!" could have been a complaint when Class B emissions were outlawed. Every single change in amateur regulations seems to have its share of complaints of "it wasn't any trouble before, so why change it?!?" At the same time these complainants want (desperately?) to hold onto their old, familiar things and puff themselves up into something noble and good and trustworthy and honest and etc.

Back around 1980 every good catholic would have said "it's silly to have guards around the Pope...'nobody' would try to assasinate a Pope!" [despite one attempt in 1978] Then in 1981 John Paul II took a bullet and, afterwards, the "popemobile" was built. There "was no trouble" prior to 1978 so it was "unthinkable" that anyone would try to harm a Pope.

There's been "no trouble" about age for amateur licenses before according to the few, the proud, the hams. All children of hams lead exemplary lives, always obeying everything, always responsible, mature, trustworthy. Of course. And the world is flat, the moon made of green cheese, and all the evil in radio exists solely on CB. :-)

>>The question of understanding and maturity is an
>>issue that should be based on facts and circumstances of each individual and

>for at least 42 years, btw.

Ah...and "insider" explains "what should be noted about FCC thinking! Tsk, tsk, tsk, no systems thinking by the "engineer" of some unnamed company who has "given talks to industry."

The purpose of ANY test, academic or otherwise, is to determine the depth of understanding of the subjects in the test. Miccolis seems to think an FCC test is just a form of lottery or bingo game. "Just supply the correct answers" because, according to the parson, "the FCC does not require any understanding of the material!" Marvelous non-deduction by the parson. If that were the case, why is there a test at all?

>>Some three years ago, the VE team that I work with had a 9-year-old girl pass
>>her EXTRA class examination (and that was when 20wpm was in effect too).

>>know what she's doing?
>
>Of course she knows what she's doing - at least as much as the test methods
>allow that to be determined. The real test is how she behaves on the air. Any
>problems you know of?

According to the pedantic parson "the FCC does not require any
understanding of the material." The "real test" is her behavior on
the air...which is a "test" in front of the "ARS community?"

>Mr. Anderson, however, thinks that no one under the age of 14 can possibly use
>an amateur radio transmitter of any kind in a responsible manner, and so no
one
>under that age should be licensed, regardless of qualifications demonstrated.

The pedantic parson is petulant. Tsk, tsk, tsk. He doesn't "know"
what I "think" despite his self-proclaimed expertise in telepathy in
"knowing what others think." Miccolis has NO qualifications in
telepathy. No one does. That does not deter the pedantic parson
who will not respond directly but must use intermediaries in here.

>But it gets worse: He claims that the parents of the 4 year olds "conned the
>VEs", and in another example, accused the ARRL and the VE team of "very mild
>fraud". (Exact google quotes provided on request).

Absolutely. Does Miccolis need a billboard size sign showing what
I wrote four years ago? "Google" doesn't need to be quoted. The
communication to the FCC became a public document on 13 Jan 99.

Does Miccolis think Google is a better archive than the FCC's own
public database?

>btw, the youngest Extra that I know of got that license at age 8, back before
>restructuring. Good operator, too - I know that from first-hand experience.

Absolutely. Absolutely ALL children who are hams are
exemplary...NO ONE does wrong if they have the LICENSE.

There is NO PROBLEM if Rev. Jimmie Callsign said there is
no problem. [all readers have seen similar statements...]

>Now if there were a problem with sub-14-year-old hams breaking the rules,
>perhaps age limits would be a good idea. However, the opposite seems to be
>the case.

What? No "thinking" elaborated there? No explanation of what
really happened according to the parson? No telepathic insights
to the deep, inner meanings of it all?

THERE IS NO PROBLEM WITH AGE LIMITS according to the
pedantic parson. There, that's the ruling. Da judge done spoke.

>Mr. Anderson has every right to suggest things to the FCC, just like any
>other citizen. No one denies that.

Better not, sweetums.

>However, accusing VEs of dishonesty without any evidence is pretty serious
>stuff.

So, take me to court, reverend. Let's make a federal case out
of it and find out how much clay makes up the feet of your
Church.

>He also seems to have a problem tolerating opposing viewpoints.

Tsk, tsk, tsk, reverend. I "have a problem?!?" Who is "replying"
to whom here? :-)

Ok, folks, here's Da Word from the pedantic parson: I HAVE
TROUBLE WITH OPPOSING VIEWPOINTS! Everyone laminate
that and keep it in your wallets. Engrave it on marble or on a
marble, put it in the Smithsonian on display, feature it on "60
Minutes." Rev. Jimmie said it in here!

Four years and three weeks ago I wrote something to the FCC
and Jimmie can't let go of it. He is a fedayin with a death grip
on the past, avenging the honor, nobility, and sacredness of
the old. Vengence is his?

No proof of there ever having been a problem due to the youth of a radio
amateur. Perhaps Mr. Anderson should read the book "Radio Rescue", about the
public service of a young ham back in the '20s, when the nature of radio
equipment made the "possibility of interference to communications in other

radio services" much greater. The book is available from Amazon.com, btw, which has reported two consecutive quarters in the black after running in the read for almost all of its existence and piling up considerable debt.

>
>There is one fact here which is absolutely beyond dispute: Leonard H.
>Anderson is NOT representative of any or all U.S. amateur radio. Aside
>from that, he is simply too "immagure".

You want quotes, Dave? How about these? The parts identified with "LA>" are all by Mr. Anderson:

1996/09/02:

LA>I've always had trouble with integrating "youngsters" in what is
LA> a primarily _adult_ skill/technique recreational activity.

1999/02/16:

LA>The arbitrary age of 14 (approximate Grade 8 in USA) is considered
LA>to allow reasonable reading comprehension of the English language for
LA>the purposes of READING the written test elements.This would be much
LA>more honest than expecting anyone to believe that FOUR YEAR OLDS
LA>have reading comprehension."

LA>"Herr Breakup wants to have an amateur radio community of the future
LA>to be prepubescent children?!?!? Let's hear it for the four year old
LA>Novices who have READ and UNDERSTOOD the written test elements
LA>and realize their responsibility in having a license!!! Let's hear it for
the
LA>VEs who have PASSED those CHILDREN for the FCC!!!"

LA>Ah yes, the warm-hearted convivial stormtrooper from central africa
LA>MUST make his SUPERIORITY known! Four year olds who can beep
LA>(along with parents who have conned the VEs into passing them)
LA>are considered "superior" to those who are not licensed in the amateur
LA>radio service."

The "warm-hearted convivial stormtrooper from central africa" is a reference to K8MN.

Particularly illuminating is the phrase "parents who have conned the VEs into passing them", which is an accusation of fraud and dishonesty.

2002-12-02:

LA>Now go back to the famous/infamous ARRL news page that showed
LA>two darling six-year-olds who were reported to have "passed" written
LA>tests for Novice and Technician, respectively.

Hmm, those two four year olds have aged somewhat.

LA>Now let any, repeat ANY,
LA>first-grade teacher look at the written exam questions and decide for
LA>themselves whether SIX YEAR OLDS can read those questions well
LA>enough to answer even 70 percent of them. Just to READ them and
LA>be able to choose any answer.

Quite an odd test, really. However, note what happens if the teacher answers in the affirmative:

LA>If you say "yes they can, because...[for any reason]" then you MUST
LA>acknowledge that (1) You don't have slightest familiarity with
LA>six-year-olds' reading/writing comprehension;

So if any first grade teacher says "Yes, some six year olds could read that", said teacher's opinion is disregarded by Mr. Anderson, who proposes the test in the first place..

LA>or (2) You think
LA>anything labeled/stamped/categorized as "ham radio material" is
LA>somehow "special" over and above any other subject matter; or
LA>3) Any child who is "involved" in any way with amateur radio is
LA>somehow a "gifted child" or a "child prodigy." All of them are nonsense,
LA>ridiculous because of a way-too-strong identification (beyond rationality)
LA>with amateur radio.

LA> ARRL was being over-indulgent in that bit of "news" fluff and the
LA>VEC group who did the alleged testing thought it all cutesy-poo
LA>from a kindly grandfatherly feeling to kiddies (picture included one
LA>of the VEC proctors, smiling and no doubt feeling "proud" over the
LA>kiddies' "accomplishments."

Now for the really good stuff:

LA>I accuse ARRL of very mild fraud on the part of condoning
LA> such such things and hypocrisy on the implication of
LA> passing a ham written exam as a sort of academic
LA> certificate.

Accusations of "fraud" and "hypocrisy". But wait...

LA>No MORE evidence is needed...the evidence has
LA>already been presented although sugar-coated with

LA>parental pride and the usual propaganda of ARRL
LA>being all good things to US amateur radio and never
LA>making mistakes or illegalities.

Now the topper:

LA>On the charge of deliberate FALSIFICATION for
LA>whatever reason, ARRL VEC is GUILTY.

Prosecutor, judge and jury, all rolled into one. But then, Mr. Anderspn tells us:

2003-01-27:

LA>I never said ARRL was "dishonest,"
LA> just that their actions on "examining"
LA> two six-year-olds and "passing" them,
LA> then publicizing them on their website
LA>was SUSPICIOUS."

Fascinating how

"parents who have conned the VEs into passing them"

and

"I accuse ARRL of very mild fraud on the part of condoning
such such things and hypocrisy on the implication of
passing a ham written exam as a sort of academic certificate."

and

"On the charge of deliberate FALSIFICATION for
whatever reason, ARRL VEC is GUILTY."

got turned into "SUSPICIOUS".

The old razzle-dazzle from Mr. Anderson isn't convincing.

>
>> "It is suggested that a minimum age of amateur radio license
>> examinees be limited to at least age 14 or older, any license
>> class. [footnote 25] Proof of meeting minimum age limit
>> would be shown to the examining VE team. Exact age would
>> not be required to be submitted to the FCC, responsibility
>> would be put on the VE test team to state to the FCC that an
>> examinee met the minimum age requirement."
>>
>> Footnote 24: "ARRL Letter of March 20, 1998, Volume 17,
>> Number 12. The two 'youngest hams' were licensed as
>> KB9RYP (Samuel Lewis, Technician Plus) and KB9SEG
>> (Sarah Bruno, Novice) in late February 1998. The ARRL
>> Letter text indicated that their siblings and parents were all
>> licensed in various amateur radio classes."
>>

>> Footnote 25: "Most states have a minimum vehicle driving
>> license age of 16, usually as a "Learner's Permit" or similar.
>> Vehicle driving has a direct possibility of causing injury to
>> others. Radio transmitters do not have such a direct effect
>> on public safety but, irresponsibly operated, a transmitter
>> could cause interference to radio navigation aids or
>> emergency radio signalling devices. Federal Air Regulations
>> allow children to pilot certain aircraft types but only under the
>> direct supervision of an adult at the controls."

Note that Mr. Anderson does not provide any evidence that young hams have ever caused any problems on the air. Note also that he does not explain why the licensing of "FOUR YEAR OLDS" justifies an age requirement of fourteen.

>>
>> ----------
>> ----------
>>
>> That comment was responsible for some to take to pulpits of

>years before being able to take the Extra Class exam. Age 10 is two
>years prior to the "entrance" to teen years.

I didn't go to public school for grades 1 through 12, either.

Back about 1948, a local nine-year-old got her Class B license. That was back when the exams required writing essays, drawing diagrams, and passing 13 wpm code - sending and receiving. At the FCC office, in front of a real FCC examiner. Of course the kid had every advantage possible, but the FCC had no problem with it.
>
>> I wrote the quoted material on a Comment to NPRM 98-143

"Over 90 years" isn't quite exact enough for Leonard. What's all this
talk of someone being pedantic?

Streamline and reduce? Your proposed minimum age limit is an
additional regulation. There is no streamlining or reduction. Let me

introduce you to a new general class radio amateur *child* courtesy of the ARRL Letter:

==>SIX-YEAR-OLD OREGON GIRL GETS GENERAL TICKET

A six-year-old girl from Roseburg, Oregon, has upgraded from Technician to
General. Mattie Clauson, KD7TYN--a fourth-generation Amateur Radio operator in her family--could be the youngest General-class operator in the US. Her new ticket was granted January 13.

Mattie allowed that the Element 3 test "was pretty hard" and she had to study for a long time before passing it on her third attempt. "The Element
3 test was a lot harder than the Tech test," she said. She was ambivalent
about the 5 WPM Element 1 Morse code exam, characterizing it as "not too hard, just a little, but kind of easy too."

Her parents, Tim and Charlotte Clauson, AC7SP and KD7QZB, say Mattie became interested in Amateur Radio when she was five. The Clausons discovered "a kid-friendly study book," Ride the Airwaves with Alpha and Zulu by John Abbott, K6YPB (no longer in print--Ed). The Clausons say Mattie, who already knew how to read, dove into it right away. Her mom and
dad helped her to study, explained the "hard questions" and encouraged her
to take practice tests at various Web sites. She obtained her Technician license last July and became KD7SDF.

The Clausons said Mattie learned Morse code using several different computer programs, and they helped her practice by tapping out letters--and later words--for her. In the end, she passed her code exam on
the very first try. For the time being, Mattie says, she's sticking with phone operation but plans to give CW a try in the future. Mattie says she
prefers HF over VHF "because I can talk to people in other countries."

Homeschooled with her sisters, Mattie loves to read, and that may contribute to her precocity. Among her favorites books are those by Cynthia Wall, KA7ITT, Encyclopedia Brown, and Nancy Drew. Her parents say
ham radio has been a very useful tool in homeschooling--in terms of letter
recognition, spelling, science, geography and other subjects.

The Clausons say Mattie doesn't consider herself "someone special" since passing her General test, and neither do they. "We do not feel that Mattie
has any abilities above any other child," Charlotte Clauson said.

For her part, Mattie says she hopes that she can be an inspiration to other youngsters her age to get involved with Amateur Radio. "I think that
since I got my license, whether Tech or higher, other kids can do it also," she said. Mattie's late great grandfather, S.A. "Sam" Sullivan, was
W6WXU; his daughter, Joan Brady--Mattie's grandmother--now holds his former call sign.

"The ham community has also been very supportive, especially in the Roseburg area," said Charlotte Clauson. "Their enthusiasm has made Mattie's experience with ham radio very positive." A article on Mattie Clauson appeared February 3 in the Statesman Journal of Salem, Oregon <http://news.statesmanjournal.com/article.cfm?i=56021>.

Allow me to quote once again a part of the above:

"The Clausons say Mattie doesn't consider herself "someone special" since
passing her General test, and neither do they. "We do not feel that Mattie
has any abilities above any other child," Charlotte Clauson said."

There you have it. Yet little Mattie has something you don't, Len--an amateur radio license! In that respect, she is superior to you. That must sting.

Source record: 60915

A number of spiteful regulars in here, unable to take strong opposition to their opinions, write about "having to pass a ham test" as an absolute must...as if the passing of that test and the grant of a license now has evidence of The RIGHT Attitude...all others are of inferior status.

Apparently there is some metaphysical transformation that occurs at VE test sessions. This is not pressent at COLEM test sessions, or at least not reported as such. It may or may not have been present at FCC field offices in Chicago in 1956. I'd like to find out the nature of this metaphysical phenomenon so as to fill in one more datum in all of science.

The phenomenon seems to involve some dawning light that comes about on passing a test. The successful enter a band of brothers community where they are now enobled, titled, and have met acceptance of these brothers? [non-gender-specific terms, of course] Or is it grander, like a sudden light shining from up above the ionosphere, a divine radiance the bestows all manner of virtues upon those filling in the correct squares on their multiple-choice tests?

Or does it occur on the receipt of a form, a certificate bearing very good printing the proclaims the recipient their very own radio station identification, thus becoming far greater than ordinary mortals' accomplishments? Is there radiance emanating from the nice certificate that infuses the soul? The radiance is not visible on older certificates...at least to ordinary mortals.

Is there a theological infusing of righteousness that occurs on a ham grant? Did that exist before or after the Test? There is much evidence in public domain that bearers of the certificate have strong leanings to righteousness. This is particularly true of those who manifestly support traditions of The Ham as they existed before their own life experience began.

Apparently there is considerable dichotomy in The Ham, shown by extreme conservatism and rigidity in activities versus the more liberal who consider The License as a mere regulation to allow them entrance to the enjoyment of a recreational activity.

The extreme conservatives bristle at the liberal thoughts. All must have the Right Attitude for The Ham is a serviceman ready and willing to do his nation's bidding at each and every emergency, disaster, and foot race events. All must march to

the drumbeats of the extreme conservatives in this service in correct mental uniform bearing proud medalions of extreme radio accomplishments (DXCC, WAZ, etc.) in order to Push The Envelope and advance the state of the amateur radio art. Extreme conservatives rigidly enforce "fun" according to their directives and definitions. "Fun" is the absolute correctness of their slavish devotion to tradition, lore, mythos as dictated.

It seems that the extreme conservatives are inculcated with some kind of abnormal behavior patterns on Passing a Test. A Transformation happened. They joined the sorted, sifted, Class Structure of rank, status, and privilege.

Liberals of The Ham are, well, more liberal. They are only having their own fun, enjoying a technically challenging recreational activity involving radio. They are not slavishly tied by conservative bonds. According to extreme conservatives these liberals do not have The RIGHT Stuff to be worthy of The Ham. Why is that?

Indeed, why are the liberals of The Ham not affected during the Transformation? The Test is the same. The Certificate is the same. Yet liberals are considered inferior.

Most curious. Answers sought for the benefit of science.

Tsk, tsk, tsk, Herr Robust couldn't hack it, ey? Couldn't get
past Novice as a 14-year-old? Must be a deficiancy you are
finally admitting...

I'm glad to see you are advancing in Remedial Arithmetic.
Have you gotten to 7 x 24 = 168 yet?

>You don't really need to continually harp on the subject. You sent your
>views directly to the FCC. Thankfully, FCC reaction to your idea
>was....silence.

Error...error...error! My document became public record on
13 January 1999. It is so stamped. Had it been "silenced,"
it would not have been visible.

On page 5 (of 14) of my document I proposed a single morse
code test rate instead of three rates. That became law with
R&O 99-412. :-)

Note: I wasn't the only one suggesting that one-rate Element
1 but it was a nice thought to see it implemented.

>If you see the barring of CHILDREN who are not now prevented from
>obtaining an amateur radio license, as a good thing, you've lost touch
>with reality. Numerous countries like the U.K. and Finland which

>with CHILDREN.

I'm already sharing this newsgroup with some immature kiddies.
:-)

Now...let's go back to the ham version of "Doogie Howser, MD"
and how the amateur radio license makes every holder a
mature, reasonable, trustworthy adult regardless of age.

<SNIP>

If your not a MD Doctor you can't expect to discuss
medical treatments with a Doctor as an equal.

If your not a rocket scientist you can't expect to
discuss rockets with a rocket scientist as an equal.

If your not a race car driver you can't expect to discuss
race car driving with a race car driver as an equal.

If your not a Supreme Court Judge you can't expect to
discuss law with a Supreme Court Judge as an equal.

So why do you try to discuss AMATEUR RADIO
with LICENSED AMATEUR RADIO OPERATORS,
when you don't have an AMATEUR RADIO LICENSE
and expect to be accepted as an equal?

Get a license then we'll talk as equals, until then your
just an outsider and your not going to be heard here!

And if that makes you think I'm one of those "spiteful
regulars" here, who cares what you think! Your
opinions don't count here!!!!!

Spiteful regulars, huh? I can take "strong opposition" to my opinions but I've seen little evidence to suggest that you are mounting "strong opposition".
According to N2EY (and I subscribe to his views on the matter), "Besides, here's a simple, plain fact: No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio
amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic slurs, excessive emoticons and general infantile behavior." Your behavior here results in the attitude which others develop toward you. Your legion of supporters seemingly consists of Brian Burke and (occasionally) the people-skill-challenged Carl Stevenson. A rational individual would likely get the message.

Now passing an amateur radio licensing exam of any class, instantly makes the examinee a member of the worldwide fraternity of radio amateurs. Now my late aunt--you remember, the one with lots of radios--had no interest whatever in becoming a radio amateur. Neither did she publicly lecture radio amateurs on how amateur radio should be regulated. You, on the other hand, have declared a several decade long interest in amateur radio. In all that time, you've never taken the first step toward becoming a radio amateur. Yet you presume to condescend to licensed radio amateurs, denigrate their traditions and insult the integrity of the largest U.S. amateur radio membership organization. You seldom miss an opportunity to point out your *professional* experience in radio and electronics and are quick to dismiss or denigrate the *professional* experience of others who post here who ARE radio amateurs.

<snip of large amount of stream of consciousness ramblings>

> It seems that the extreme conservatives are inculcated with
> some kind of abnormal behavior patterns on Passing a Test.
> A Transformation happened. They joined the sorted, sifted,
> Class Structure of rank, status, and privilege.

Those thoughts don't even represent a "nice try" on your part.
You're right about the transformation though. One can be a non-ham one day and and a part of amateur radio the next. What you call an abnormal behavior pattern is likely the exhilaration of becoming a licensed ham. Those folks are entitled to that "status". The "privilege" is that granted by their license class ("rank"). Don't have a license? You might have to wait for your transformation.

> Liberals of The Ham are, well, more liberal. They are only

Radio amateurs may put as much into amateur radio as they desire. They may be as active or inactive as they choose or as their circumstances dictate. They may delve as deeply as they choose into the technical side of radio; they may devote their time to public service or they may spend their hours doing what their licenses actually permit: operating. You have not yet made any attempt to actually become a radio amateur. You are on the sidelines *talking* about amateur radio. Much of that talk smacks of envy.

You can perform your gruff, all-knowing geezer routine all you like, Leonard H.
Behind your curtain stands a humbug.

An amateur radio license makes every license holder a ham. I can't find a single Part 97 passage which speaks to the necessity of a radio amateur being mature, reasonable, trustworthy or an adult. Be that as it may, you aren't a ham so why are you worried about it?

yeh they ruined that security guard guy, and i think eric rudolph did
that, and they tried for years to find him and have not as yet, and i
got a strange feeling they are doing the same thing to that white guy
who they blamed for that anthrax stuff.....the world's best police
force is just not living up to its billing.......j edgar must be
turning over in his grave.......of course he was rumored to be a cross
dresser but he did like to bust crooks and ran a tight ship........

1795. Re: Minimum Age Requirements for US Radio Amateurs

>There are more radio amateurs in the USA now than 90 years ago.
> They have HF and higher power capability, relatively easy-to-use
> controls compared to 85 years ago. Did anyone talk about "skip"
> 80 years ago? No?

Was it called "skip" then? No. Was the phenomenon of long distance
communication discussed then? DEFINATELY!

Just one more example of talking without thinking, Lennie.

>Should radio amateurs have been thrown off MF in the US in the
> 1920s? Amateurs would have said, "of course not, we never
> 'caused any trouble!'" [they did, but ARRL won't tell that side of
> the story]

Sure they did. A very popular historical text published by the ARRL very
specifically discussed the problems of mutual interference, and yes,
interference BY Amateurs.

Of course Lennie would like folks to forget this as it once again torpedos
his anti-Amateur rants. it also further dispells his "the ARRL is dishonest"
lies.

>Back around 1980 every good catholic would have said "it's silly
> to have guards around the Pope...'nobody' would try to assasinate
> a Pope!" [despite one attempt in 1978] Then in 1981 John Paul II
> took a bullet and, afterwards, the "popemobile" was built. There
> "was no trouble" prior to 1978 so it was "unthinkable" that anyone
> would try to harm a Pope.

This is an Amateur Radio policy newsgroup, Lennie, not a
security-of-the-Pope newsgroup.

(Personally, I could care less, however Lennie is the first one to
chastise anyone who dares to make a "non-Amateur Radio" analogy...Putz that he
is)

>There's been "no trouble" about age for amateur licenses before
> according to the few, the proud, the hams. All children of hams
> lead exemplary lives, always obeying everything, always
> responsible, mature, trustworthy. Of course.

As it pertains to the operation of an Amateur Radio station, can you PROVE otherwise, Lennie?

>... and all the evil in radio exists solely on CB.

Forgot one, Lennie....And at 10048 Lanark Street, Sun Valley, CA

>The purpose of ANY test, academic or otherwise, is to determine
> the depth of understanding of the subjects in the test.

In the case of ANY test in which the question AND answers are known before hand, the only thing that is determined is how well the examinee can memorize lines.

>Miccolis
> seems to think an FCC test is just a form of lottery or bingo game.

In the case of present day Amateur and GROL tests, this is just about what it is. Get a sufficent number of questions on your "test" that you recall from "studying", and BINGO, you passed!

>"Just supply the correct answers" because, according to the
> parson, "the FCC does not require any understanding of the
> material!" Marvelous non-deduction by the parson. If that were
> the case, why is there a test at all?

I was hoping a PC liberal such as yourself could answer that.

>>Of course she knows what she's doing - at least as much as the test methods
>>allow that to be determined. The real test is how she behaves on the air.
>Any
>>problems you know of?
>
> According to the pedantic parson "the FCC does not require any
> understanding of the material." The "real test" is her behavior on
> the air...which is a "test" in front of the "ARS community?"

The real test >>IS<< her conduct on the air. It's the only real "test" left, regardless of mode.

>The pedantic parson is petulant. Tsk, tsk, tsk. He doesn't "know"
> what I "think" despite his self-proclaimed expertise in telepathy in
> "knowing what others think."

Sure we "know" what you think, Lennie! If WE can't make an informed assessment after being bombarded by your vile spewings from yeas of NG spamming, WHO can...?!?!

>Miccolis has NO qualifications in telepathy.

Who needs it, Lennie? You constantly harrass this NG with your lies, misconduct and story-telling. No telepathy needed here!

>>But it gets worse: He claims that the parents of the 4 year olds "conned the
>>VEs", and in another example, accused the ARRL and the VE team of "very mild
>>fraud". (Exact google quotes provided on request).

>
> Absolutely. Does Miccolis need a billboard size sign showing what
> I wrote four years ago? "Google" doesn't need to be quoted. The
> communication to the FCC became a public document on 13 Jan 99.

Obviously we must, Lennie. You at first tried to disclaim what you wrote,
then tried to claim you were quoted out of context. Probelm is that the ENTIRE
text WAS quoted, leaving you nothing to hide behind.

>Does Miccolis think Google is a better archive than the FCC's own
> public database?

When it comes to your misconduct, obfuscation and blatant lying in this
forum, it certainly is.

>>Now if there were a problem with sub-14-year-old hams breaking the rules,
>>perhaps age limits would be a good idea. However, the opposite seems to be
>>the case.
>
> What? No "thinking" elaborated there? No explanation of what
> really happened according to the parson? No telepathic insights
> to the deep, inner meanings of it all?
>
> THERE IS NO PROBLEM WITH AGE LIMITS according to the
> pedantic parson. There, that's the ruling. Da judge done spoke.

Damn, Lennie...You didn't even try to cut-and-paste your way out of a
stupid staement...Just went right ahead and humiliated yorself in public again.

He SAID that age limts would be a good idea >>IF<< there was a problem
with 14 year olds "breaking the rules".

>>IF<<

So far you have not only NOT made your "case" for age limits, you have
done a pretty good job of justifying keeping the "status quo", Lennie. That
must not sit well with you. Need a Zantac?

>Ok, folks, here's Da Word from the pedantic parson: I HAVE
> TROUBLE WITH OPPOSING VIEWPOINTS! Everyone laminate
> that and keep it in your wallets. Engrave it on marble or on a
> marble, put it in the Smithsonian on display, feature it on "60
> Minutes." Rev. Jimmie said it in here!

Jim's only states the obvious, Lennie. You DO have an authority figure
problem...Specifically you get real foul and profane when someone questions
YOUR "authority".

>Four years and three weeks ago I wrote something to the FCC
> and Jimmie can't let go of it.

Only because you first lie about it and then refuse to provide any
documentary evidence that it's warranted.

>He is a fedayin with a death grip
> on the past, avenging the honor, nobility, and sacredness of
> the old.

This from a putz whose only claim to fame in radiocommunications was a 3
year tour-of-duty at a rear area Army relay station IN THE FIFTIES...?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! !

What a sense of humor, Lennie! You're such a card!

Personally, I enjoyed it because it does my heart good to see your nose rubbed in your own "business" so effectively and concisely. Jim does it so-much-more civilliy than I, but the punch in the gut is more effective. Way to go, Jim.

It's gonna take a LOT of "Vicks Vapo-Rub" before you can "smell the roses" again, Lennie.

Perhaps if you tried to keep your stories straight once in a while...?!?!

Or better yet, try using facts for a change. You may not like the results as much, but you won't look as stupid as you do now.

C'mon Len, quote the whole paragraph:

8. It should not be the function of a regulatory
Administration to set up and administer what is
essentially a prize-awarding system, where personal status
is conferred by the grade of license. The function of a
regulatory license system is to determine that the
applicant meets the uniform requirements to perform the
basic functions of the regulatee, and the issuance of
status symbols is best left to the private sector which is
replete with awards for Manual Morse Code speed and for
making various contacts under various conditions.

Even when someone agrees with your stand it gets twisted around into
an attack. Why does it have to be that way?

And there have been FCC executives over the years who believed
that no FCC staffer or decision-maker SHOULD hold an amateur
licence because of "conflict of interest". (I have been
unjustly accused of that several times when I worked on matters
involving amateur licensees.)

Fortunately they are/were in a minority and there are a number of
staffers and decision-makers who deal/have dealt with amateur
regulatory and enforcement issues who are/were amateur licensees.

But you, Len, are not a staffer or decision-maker of the FCC, nor
an amateur license holder, present or past. What, then, is YOUR
stake in amateur radio other than "critic from the sidelines" ?

This was my point exactly. While I certainly support Len's or anyone else's
right to have an opinion, Len seems to think he knows what's best for a
hobby/service that he does not partake of. Seems strange to me.

The FCC is interested because they have to be - it's their job. Companies like Kenwood are interested because they want to sell radio equipment. (That's not necessarily a bad thing, btw, but it is not necessarily always a good thing thing either). Prospective hams are interested because they have to take the test, and hams are interested because they have a stake in what the ARS becomes if license requirements change.

The question of "why is Mr. Anderson so interested?" has been asked of him many times, but Mr. Anderson keeps his motivations to himself. He does, however, claim to know the motivations of all those who oppose his views. Interesting.

And in those 91 years, can Mr. Anderson cite any cases where the youth of a ham
was related to an on-air problem? He apparently cannot.

>> See
>> Thomas H. White USA radio histories on the Internet. Interesting
>> stuff, not limited or biased as comes out of a small city near Boston.

"biased as comes out of a small city near Boston"....would that be

Peterborough, NH, home of the amateur radio magazine "73"?

or perhaps it's

Greenville, NH, where the now-defunct amateur radio magazine "Ham Radio" was published?

Both are small cities near Boston - Greenville is closer. Mr. Anderson claims to have written some articles for "Ham Radio", so perhaps that is the one he refers to. I haven't found Ham Radio historical accounts to be biased, however. Perhaps he knows more about that defunct mag.

You missed the point.

Mr. Anderson does not want to discuss amateur radio "as an equal" with you or
me or anyone else who disagrees with him. His behavior here over at least the
past 5 years has convinced me that he considers himself above all of those who
disagree with his views. He thinks that to talk with us as equals would be to
lower himself. This attitude comes through very clearly, particularly when he
attacks others' technical knowledge.

Now he will probably treat us to more posts about how nobody has telepathy, and
call me some more names.

>Get a license then we'll talk as equals, until then your
>just an outsider and your not going to be heard here!

Mr. Anderson has every right to post here - just like any other interested party. However, that right also means that others have the right to comment on his posts, and point out the logical errors and factual mistakes in them. But Mr. Anderson does not like it when those he considers his inferiors point out that the would-be emperor has no logical clothes.
>
Here's an example:

Mr. Anderson says he is interested discussing the entry requirements for amateur licenses. He also dismisses the views of those already licensed, particularly Extras, citing the fact that those who have the highest class of amateur license will probably never have to take another license test.

The problem with this argument is that it's illogical. Consider some of the ramifications of this line of "reasoning":

- Already-licensed drivers should not be interested in driver license requirements
- Those with college degrees should not be interested in the requirements for a degree, since they already have one

Better yet:

Since Mr. Anderson has already achieved the age of 14, he should not be interested in age requirements for an amateur license.

All completely illogical arguments, right? Try telling Mr. Anderson.

>And if that makes you think I'm one of those "spiteful
>regulars" here, who cares what you think! Your
>opinions don't count here!!!!!

I disagree. Everyone's opinion's count. How much they count depends on how well-founded they are. Many of Mr. Anderson's opinions have been shown to be full of logical holes.

>
>*Spiteful* regulars, huh?

Dave,

Note that Mr. Anderson does not say who these "spiteful regulars in here" are. Nor does he say who has written that having to pass a ham test is an absolute must. There's a big difference between saying it's an absolute must and wondering why someone who has never held any class of amateur is so interested in the entry requirements. This is particularly interesting in light of the fact that for almost 12 years, all amateur privileges for the bands above 30 MHz have been available without the Morse code test which Mr. Anderson opposes so strongly.

Any interested party has the right to comment, discuss, debate, and petition the government for changes. Nobody denies Mr. Anderson that right. But why is Mr. Anderson so interested, since it's obvious he has little intention of getting a license or setting up and operating an amateur station?

>I can take "strong opposition" to my opinions
>but I've seen little evidence to suggest that you are mounting "strong
>opposition".

Len Anderson is a seventy-year-old who has not acted upon his declared
"interest" in amateur radio though he has told us that his "interest"
has spanned decades. The chances of Len moving toward actually
obtaining a license are remote at this point. I believe that he ever
did take and pass an amateur licensing exam, he'd find himself with a
familiar problem: dealing with his gift for honking people off.

> Just remember these words by Mr. Anderson:
>
> "I've always had trouble with integrating "youngsters" in what is a primarily

Len doesn't play well with others.

Unfortunately, answer D is more likely to be the occurance here - with 10+ more individuals doing answer A and all laughing about it! :-(

Seriously: I personally would say answer B is the best answer. Answer C is a close second, but doesn't STOP the violation in progress. That's why it loses.

I know political conservatives who are radio amateurs and I know
political liberals who are radio amateurs. Len Anderson is no radio
amateur. Note that he is using the adjective "extreme". "Extreme" in
this case seems to indicate anyone who disagrees with Leonard.

The Wizard revealed that, underneath all the smoke, noise and flames, he
was really a nice fellow. My dealings here with Leonard H. Anderson
date back for about seven years. I'm still waiting for his revelation.

Before I forget, congrats on getting your station up and running.

Phil's comment and yours are what I've been saying about Len's posts for about seven years. Why would anyone follow the lead of someone who knows a few hams and has read some books and magazines over the views of those who have experience in amateur radio, who are enthusiastic in their support of amateur radio and who are active as radio amateurs?

Dave:

I simply plugged "WA3URR" in to the call sign search window at qrz.com,
and it came back as not being found in the database. Since the database
comes from the FCC, and is updated regularly, I just naturally ass-u-&-me
that the call is available at this time. Most Vanity call sign sites usually
don't provide listings of 2x3 calls available, therefore the
process-of-elimination
method is the usual way of telling whether or not a specific call is available.

Lennie:

Nah, that's not it at all. Those of us who became licensed radio amateurs
(something you can't seem to accomplish even at the entry level) and
upgraded to Amateur Extra class simply did so because the challenge
was there, the effort was rewarded with increased operating privileges, and
we were intellectually and emotionally disposed to take on the task and
succeed. Unfortunately, we've always been the object of jealous scorn by
the likes of ham radio wannabes like yourself, who find it easier to stew
in your invidious resentment of our accomplishment, and accuse of
all sorts of imaginary character flaws. We've got your number, Lennie.

> Liberals of The Ham are, well, more liberal. They are only

Lennie, getting a ham radio license is now falling-off-a-log easy.
Getting one would at the very least qualify you in some marginal way to
make the judgments you indulge in on this newsgroup without benefit
of a license. What we all want to know is -- why don't you?

> Indeed, why are the liberals of The Ham not affected during
> the Transformation? The Test is the same. The Certificate
> is the same. Yet liberals are considered inferior.
>
> Most curious. Answers sought for the benefit of science.

No, Lennie, liberals in amateur radio (or, in your case, NOT in ham
radio) are all the same -- they want something for nothing. They're
not willing to give something of themselves in order to earn privileges
others seem able to achieve with little or no effort. The difference is
that the conservatives are willing to make the effort -- they try.
Sometimes they fail, but they go back and try it again. Eventually
they succeed -- and don't stand on a street corner denouncing those

who make the requirements and uphold the standards. The thing now, Lennie, is that you liberals have won -- ham radio licensing standards have now been reduced to insignificance, yet you persist in railing against them anyway. The only impact you're having is to give a negative image of yourself and other liberals -- but the world is finally starting to see all of you for what you are -- and you are now losing your power just as incrementally as you gained it.

Lennie -- you're the Wicked Witch of the West -- and the Scarecrow just tossed a bucket of water on you!

Len, have you and Vipul met? If not, you guys should get together over a nice latte' at Starbucks and discuss how both of you can solve all of the problems of amateur radio while at the same time turning it into the hobby you both want it to become. Howzabout it?

Meanwhile, the rest of us will be enjoying the privileges our licenses grant us, and we'll be having fun with it, whatever that means to each of us. If the two of you overthinking, killjoy brain trusts don't like it, tough bird droppings. You can proselytize over our supposed deficiencies all you like, but the more you criticize us for pursuing our goals in this hobby, the more ridiculous you look for wasting your time.

Len is a mystery. He's obviously knowledgeable about some things, so why does he waste so much time criticizing this hobby? I place him and Vipul in the same category- I respect them for their knowledge of electronics (which I know little about presently) but disdain their efforts to slam people who are in this hobby. I have to wonder why they waste so much time. I mean, there are so many other things they could be doing than griping on an amateur radio policy group. Griping about policies is one thing; griping about the perceived problems with the entire culture of the hobby is something else.

Isn't there still a two year waiting period before a call can be
reassigned? There is a small but non-zero chance the call is within that
period.

coward?

Did you even try to contact him by E-mail Mopar? I suspect most on here wouldn't because they're afraid to reveal their real E-mail address, names etc. And you talk about cowards Mopar, well what's your real name - address - etc. Why do you have to hide it? I've been posting on this news group for a long while now using my real name, callsign, and I haven't had anything serious happen as a result. So it appears I have a lot more guts that most of the posters on this group including you. Even Doug posted using his real name and callsign at the beginning. If you call Doug a coward for no longer using his real name and callsign, well he's just taken a page out of your book, i.e. using made up screen nics and posting through anonymous mail servers, like "hotmail.com" just like you do Mopar. You call him a coward then include yourself.

> oh and we are supposed to believe you?????

You too lazy to spend a few minutes to contact the people involved and
find out for yourself? Or would you rather let Twisted hand you a line
of crap, stick up for him without checking the facts, and then find
out later he's wrong so you end up looking dumb for believing him in
the first place. I posted the message as a simple "heads up" for
others to read. I fully expect anybody of reasonable IQ to check the
facts for themselves, and not to depend on Twisted, or even me, and

make their own INFORMED judgment.

Twisted has been wrong far to many times to trust him. He has his agenda and he doesn't really care who gets burned in the process, including his fellow CBers, as long as they help further his campaign of misinformation and revenge.

Amateur Radio Newsline™ Report 1330 - February 7, 2003

++
+++

A NOTE ABOUT WHAT YOU ARE ABOUT TO READ

For those of you who only know of the Amateur Radio Newsline (tm) as a text newsletter we would strongly urge you to listen to the audio version this week. Our service is best described as "audio intensive" and all Amateur Radio Newsline (tm) scripts are specifically written for the "spoken word." Because of this there is no way to convey in print the emotion of what you "hear" when you listen rather than read.

Candidly, you are really missing what Amateur Radio Newsline is really all about by only reading it. The newscast is recorded each week by professional broadcasters and is available for private listening or rebroadcast over your repeater. Two methods of delivery are available: FTP downloadable MP3 files or dial-in telephone.

Please visit our website at http://www.arnewsline.org for a list of telephone numbers (you have to pay your own long distance charges) and links to our voice newscast. Free FTP Downloads are available at our site by clicking on the newscast number at the top of the page.

Amateur Radio Newsline report number 1330 with a release date of Friday, February 7 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T. The space shuttle Columbia falls from the sky and all on-board are lost. Three were radio amateurs. More on the tragedy and the search for answers comes your way right now:

(Billboard Cart Here)

**

HAM RADIO IN SPACE: HAM RADIO OPERATORS LOST IN COLUMBIA TRAGEDY

Three ham radio operators were among the seven member crew of the space shuttle Columbia who were killed when the orbiter broke up during re-entry over Texas on Saturday February 1st. Amateur Radio Nesline's Norm Seeley, KI7UP, has the details:

--
President Bush Audio: Audio only report. Hear it at
http://www.arnewsline.org
--

Those were the words of President George W. Bush expressing the grief of the world on learning that that the spaceship Columbia had fallen from the sky. That it's crew of seven astronasuts was lost.

On board was a 7 member crew that included three ham radio operators. Killed in there tragedy were Mission Commander Rick Husband, and Pilot William McCool. Also lost were Mission Specialists Michael Anderson, David Brown KC5ZTC, Laurel Clark, KC5ZSU, Kalpana Chawla, KD5ESI and Israeli Payload Specialist Ilan Ramon. Ramon was a well-known Israeli Air Force pilot became the first man from his country to fly in space.

Columbia was at an altitude of about 203,000 feet over north-central Texas and traveling at 12,500 mph, when Mission Control lost all contact and tracking data. It was about 9 a.m Eastern time. That was almost the same moment when residents in the Dallas area reported hearing a gigantic sonic boom. The loudest anyone had ever heard. Witnesses who looked up reported seeing a bright flash followed by smoke plumes streaking across the sky. Several people grabbed their home video cameras and caught the tragedy. Tape shows debris appearing to break off into separate balls of light and falling back to Earth.

What actually happened is still very much unclear. The shuttle is essentially a glider during the hour-long decent from orbit. It is covered by some 20,000 thermal tiles to protect against temperatures as high as 3,000 degrees.

The space agency is already looking at a liftoff incident where a part of the center fuel tank's foam insulation broke away and impacted one of the Columbia's wings. NASA saus that just before it disintegrated Columbia experienced an abnormal rise in temperature and wind resistance. That forced the shuttle's automatic pilot to make rapid changes to its flight path. Some experts say that this is possible evidence that some heat-protection tiles were missing or damaged.

Administration officials said there was no immediate indication of terrorism but accounts from those on the ground have lead to speculation of a explosion somewhere on board the orbiter. Others say the abnormally high sound level was the result of multiple pieces of Columbia all breaking the sound barrier at slightly different times and creating an ongoing sonic boom.

Debris from Columbia fell along Northern Texas and into Louisiana. NASA declared an emergency after losing contact with the crew and sent search teams to the Dallas-Fort Worth area. It also warned people to stay well clear of any debris field they might encounter because of chemical contamination from the very toxic fuel. But that was easier said than done. Residents of the town of Nacogdoches say they found bits of metal strewn all across the city and a local dentist reported that a metal

bracket about a foot long crashed through his office roof.

STS-107 was NASA's 144th shuttle mission.

For the Amateur Radio Newsline, I'm Norm Seeley, KI7UP.

--

On January 28th, 1986, the space shuttle Challenger exploded shortly after liftoff but in 42 years of U.S. human space flight, there had never been an accident during the descent to Earth or landing until now. NASA has grounded all of its space shuttles, but there's no word yet that the Columbia tragedy will affect the current Expedition 7 crew's future aboard the International Space Station. (ARNewsline™ from published news reports)

**

HAM RADIO IN SPACE: TEXAS HAMS ASSIST IN SHUTTLE DEBRIS HUNT

Amateur Radio played a signifigant role in the debris recovery efforts after Columbia broke up over Texas. Amateur Radio Newsline's David Black, KB4KCH, has that part of the story.

--
A family member gets a close-up view to the tragedy. One of the Columbia's heat protective tiles was found near my nephew's college dorm in north central Texas. My newphew took a picture of it, which you can see on the Amateur Radio Newsline website. While the tile survived re-entry, the Columbia did not.

Within hours of the accident, Amateur Radio Emergency Service volunteers with the Nacogdoches Amateur Radio Club began helping Emergency Management officials and NASA teams in locating and cataloging debris falling from the shuttle.

Tim Lewallen, KD5ING, is the Public Information Officer for the Nacogdoches Amateur Radio Club. He says the hams worked in tandem with students from a local college's Geographical Information Systems lab. Together, they surveyed the city and county looking for shuttle debris. When any was located it was photographed and its exact position determined using a G-P-S. The data was later downloaded into a database that will be superimposed over terrain maps. Local officials say debris was found in nearly 2,000 sites, including some 1,200 places in Nacogdoches County.

As we go to air, well over 12,000 pieces of Columbia had been found, from as far west as New Mexico eastward into Louisiana. NASA hopes the position of the debris field will give it some insight into what caused Columbia to disintegrate.

Reporting for the Amateur Radio Newsline, I',m David Black, KB4KCH.

--

Lewallan says that the entire effort was coordinated by the ARES group. He adds that ARES volunteers were also directed to coordinates given by NASA that the space agency believed might contain missing parts of the Columbia. The recovery and cataloging effort went on for several days. (Nacogdoches Amateur Radio Club via KD5ING)

**

HAM RADIO IN SPACE: AMSAT MOURNS COLUMBIA LOSS

Its no secret that Amateur Radio and the space program have had a very close association since the very first Orbiting Satellite Carrying Amateur Radio or OSCAR was launched back on December 12th 1961. It was carried into space by a United States built Thor Agena launch vehicle from Vandenberg Air Force Base in California. OSCAR 1 was a tiny 4.5 kg package that made only 312 orbits before re-entering the Earths atmosphere. But it set the stage for four decades of ham radio in space. A lot of it took place from the space shuttles including Columbia. In fact it was from Columbia that ham radio's first man in space, Owen Garriott, W5LFL, talked to a senator and a king:

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

And so it was when news of the Columbia's demise began to settle in that the representatives of AMSAT groups from around the world began paying their respects. Perhapps none was more poignant than the words of AMSAT North America President Robin Haighton, VE3FRH. His statement is read by Amateur Radio Newsline's Newsline's Henry Feinberg, K2SSQ:

--

"It is with great sadness that I have learnt of the Columbia disaster. AMSAT has always been a strong supporter of the Shuttle program and of ARISS. We have had many interactions with the astronauts who have fearlessly ridden the shuttle into space. Currently several are AMSAT members and supporters.

On this sad occasion on behalf of the Board of Directors, Officers and Members of AMSAT, I wish to send our deep sympathy to the families, relatives and friends of those who undertook this Columbia mission. Their understanding of the risks taken on this and other missions did not prevent them from performing at the highest level, and, unfortunately paying the ultimate price.

To our friends at NASA, we at AMSAT send our understanding and our sympathy,
knowing that the exploration of space and carrying out important experiments
for the benefit of humanity will continue to be your mission."

--

AMSAT France, AMSAT Germany, AMSAT Itlaly, AMSAT Sri Lanka and other AMSAT groups the world over also offered words of condolence an consolation.

Frank H. Bauer, KA3HDO, the Chairman of ARISS International issued a statement that read in part -- and we quote: "This is a difficult time for all of us. Let's work together to keep the torch of space travel alive in the hearts and spirits of humans worldwide. And most importantly, please keep the astronauts, their family and friends in your thoughts and prayers." (AMSAT-NA, ARISS, others)

**

Break 1

From the United States of America, we are the Amateur Radio Newsline, heard on bulletin stations around the world including the W4BBB Radio Amateurs Club of Knoxville repeater serving Knoxville Tennessee.

(5 sec pause here)

**
RESCUE RADIO: TENNESSEE HAMS HELP AFTER TORNADO

The January 8th issue of the Knoxville News-Sentinel tells the story of Sheila Tailent, KB4G, and how she came to the rescue after a tornado ripped through Morgan County Tennessee. Tailent is the state ARES coordinator realized a need to provide reliable communications following the storm. Thanks to her efforts, within 15 minutes after the twister struck hams with emergency communications gear were on their way.

According to the News-Sentinel, for the next 48 hours ham radio volunteers relayed communications among police departments, firefighters, rescue squads, demolition units, repair crews the Red Cross and many others. The article says that dozens of radio amateurs worked around the clock with many taking vacation days from work and donating the time to the community.

The newspaper says that a conservative estimate of the value of the communications provided free of charge by hams to Morgan County could be upward of $80,000. (W5YI Report)

**

RESCUE RADIO: BE PREPARED - PART 2

The Columbia tragedy and the Morgan County tornado are two incidents that again bring home just how important it is for ham radio operators to be prepared. The ARES members in Nacogdoches Texas had no idea that their training would involve them in trying to find out why a space shuttle fell from the sky. But thats excatly the role that they played -- and continue to play.

Last Week, Lloyd Colston, KC5FM, was here to explain the importance of emergency preparedness. Now says Colston, its time for some personal

preparations:

--
Audio only report. Hear it at http://www.arnewsline.org
--

Lloyd Colston, KC5FM, is with the Mayes County Emergency Management in Pryor Oklahoma. He will be back from time to time with other tips on how hams can be ready for any emergency that may come their way. (KC5FM)

**

RADIO LAW: FCC AND NTIA TO IMPROVE FREQUENCY COORDINATION

The FCC and the Commerce Department's National Telecommunications and Information Administration have signed a new Memorandum of Understanding on spectrum coordination. According to the C-G-C Communicator, the agreement calls for the FCC to responsible for non-federal frequency users such as broadcast, commercial, public safety and even Amateur Radio. The N-T-I-A will hold responsibility for all federal government users. The full document is on line at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-230835A1.doc (CGC Communicator)

**

SPECTRUM ISSUES: FCC REALLOCATES SPECTRUM FOR NEW WIRELESS SERVICES

Also from the C-G-C Communicator word that the FCC has reallocated 30 megahertz of spectrum from the 2 GHz Mobile Satellite Service to fixed and mobile services. The purpose is to provide frequencies for a variety of new wireless applications. The Commission is seeking comments on potential uses of an additional 15 megahertz of spectrum previously identified for new wireless services. It also wants comments on increased flexibility in the Unlicensed Personal Communications Service band. This too is on the web. You will find it at: http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-230754A1.doc (CGC Communicator)

**

CONVENTIONS AND HAMFESTS: SUPERFEST 2003

A-E-S has gotten it's Superfest 2003 registration form online. The Superfest takes place April 4th and 5th at Amateur Electronic Supply in Milwaukee. To register take your web browser to www.aesham.com and take the link to the Superfest menu. If you need help or have any questions, please contact Molly Schreiber at A-E-S. Her e-mail is molly@aesham.com (AES)

**

HAMFESTS AND CONVENTIONS: RADIOFEST IN SEASIDE CALIFORNIA

The Naval Postgraduate School Amateur Radio Club will host RadioFest 2003 on Saturday, February 22nd. This is a West Coast hamfest and will be held at the General Stilwell Community Center in Seaside, California. The show includes a flea market, vendor booths, demonstrations, license exams, door prizes and more. Among the forum presenters scheduled are Leslie Ragghianti from the 911 Emergency Communications Center, Jeff Orr, K-G-6-K-C-O, discussing "Echo Link" along with Don Carlson , KQ6FM, and Glenn Thomas, WB6W discussing ARES. Sound interesting? For more information go to the web at www.radiofest.org (W6FVI)

**

RADIO MEETINGS: SCADS IN SEAL BEACH CALIFORNIA

Also in the Golden State the Southern California Area DXer's shortwave listeners monthly meeting takes place on Saturday February 15th from noon to 4:00 p.m. Pacific time. The venue is the F&M Bank Community Room in Seal Beach California. This months subject is Radio Communication Listening Worldwide. For more information e-mail Bill Fisher at billfishernow@netzero.net (SCADS)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

**
THE FUTURE: HOW TO MAKE HAM RADIO MORE KID FRIENDLY

"How to Make Ham Radio More Kid Friendly" is the topic that Amateur Radio Newsline has chosen for this years Ham Radio Town Meeting and we are looking for some younger hams who might want to take part.

The Town Meeting is held each May at the Dayton Hamvention. This years Hamvention theme is the "Year of the Young" and planners tell us that the three day show will focus on the young ham and on bringing 12 to 18 year olds into amateur radio.

Its no secret that recruiting youngsters into the hobby is getting harder and harder. Keeping most of them is all but impossible. There is organized sports. There are those numerous after school activities. And lets not forget the lure of the World Wide Web with its license free ham-radio like chat rooms. All of this makes it a real challenge to get youngsters licensed and keep them interested.

Obviously the old ways of recruiting young people no longer work. So we are going to take two hours and give you the chance to come up with some new ways.

If you are a young ham planning to attend Hamvention 2003 and would like 10 minutes to present your ideas, drop us an e-mail. We will go through what you send us and some of you might be invited to be a part of our all-star panel.

The best way to contact us is by e-mail. Mark your note Town Meeting and send it to newsline@arnewsline.org. (ARNewsline™)

**

ON THE WEB: REPEATER LINKING POWERPOINT PRESENTATION

If you are into repeater linking, this one is for you. Kevin Custer, W3KKC, reports over the VHF Reflector on a new Repeater Linking presentation using Microsoft's Power Point Presentation format. It was produced by Douglas Otoupal, N5HYD, is 131 kilobytes in and available at http://www.repeater-builder.com/rbtip/pdfindex.html. (VHF Reflector)

**

INTERNATIONAL - GREECE: NEW VHF/UHF ONLY LICENSE CLASS

The V-H-F Reflector says that Greece now has its own, entry level VHF only license. The new ticket use the prefix SW1 through SW9 with priveleges on 2 meters and above. SV1 through SV9 prefixes indicate Greek stations that have full High Frequency operating privileges. (VHF REflector)

**

INTERNATIONAL - GERMANY: DEUTSCHE WELLE DROPPING NORTH AMERICAN SERVICE

Germany's premiere shortwave station says that transmissions to North America will soon cease. This with confirmation by Margot Forbes of the broadcaster Deutsche Welle that it will be terminating the long running service at the end of March.

Up until now, there have been several claims made by various sources that Deutsche Welle would be shutting down its broadcasts to North America this spring. The station would not deny or confirm this directly until now.

According to Forbes, the stations budget has been slashed time and time again by the German Government. Forbes says that maintaining shortwave transmissions are particularly expensive and the decision has been made to cancel operation on some frequencies. This includes the very popular transmissions to North America

Forbes says that there are no plans yet for a replacement service. but says there is the possibility of somthing being worked out using satellite delivery or over the Internet. (shortwavedxing.com)

**

PROPAGATION: SA 100 MICROWATT 7 MHZ BEACON HERARD IN USA

And a possible record for a high frequency beacon transmitter. Over the last 4 months, an extremely low power beacon transmitter has been operating from the QTH of ZS1J at Plettenberg Bay, South Africa. The measured power output of the 7.029 MHz transmissions is 100 microwatts and reception reports from all over South Africa, up to 1100 kilometers, have been received. But the big surpriose came on Tuesday January 29th. Bill Diggens, WA8LXJ, in West Union Ohio made a positive identification of the beacon transmiutter.

Diggens gave it a Readability 2, Signal strength 1 and tone T 9. He also made a tape recording of the signal received and played it back to amazed South African amateurs on the daily, split frequency net. A newt that can be found 7.095 and 7.177 MHz in the 40 meter band. (ZS6AKV)

**

DX

In DX, PS7AB says that Mexiana Island will be on the air May 21st through the 25th. Five operators will activate Mexiana on 40 through 10 meters on SSB only. Mexiana is considered the most wanted Islands on the Air group in all of South America. More information is on the web at http://www.mexianaisland2003.hpg.com.br (Press release)

**

THAT FINAL ITEM: HAM RADIO AND THE SPACESHIP COLUMBIA

And finally this week, we like many other Amateur Radio operators around the world felt a special loss following the Columbia space shuttle disaster. As we already mentioned, three of the astronauts on board were licensed Amateur Radio operators. And Amateur Radio has had close ties to the space program, to the astronauts, and to the ill-fated Columbia since the very early days of shuttle flights.

It was on board the Columbia during the STS-9 mission in November of 1983 that Dr. Owen Garriott, W5LFL, became the first person ever to operate a ham radio station from space. In case you have forgotten, this is how that historic contact sounded:

--
Audio only. Hear it in the audio version at http://www.arnewsline.org

--

That QSO marked the first time that astronauts could communicate directly with people on Earth. And they did it without going through the normal NASA's communications channels.

In 1990, NASA, the ARRL and AMSAT formed SAREX -- The Shuttle Amateur Radio Experiment. This was a program to schedule regular contacts between school students and the astronauts on-orbit using Amateur Radio. Astronauts were encouraged to obtain Amateur Radio licenses. Many did and they used them to talk with kids in schools the world over. A lot of those contacts took place from the mid-deck of the spaceship

Columbia.

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

In addition to the SAREX contacts, astronauts were encouraged to spend some of their free time making random contacts with hams on Earth. Open contacts they were called and they became a new form of radiosport. A kind of contest with radio amateurs everywhere vying to be the first in the city or neighborhood to talk to a ham radio operator in space.

Then Russia entered the realm of ham radio on-orbit. Amateur Radio gear was installed on its MIR space station and talking with cosmonauts soon became almost commonplace. Who can forget British astronaut Helen Sharman when she visited the MIR and took to the airwaves using ham radio.

--
Audio only. Hear it in the audio version at http://www.arnewsline.org
--

SAREX has now given weay to ARISS -- Amateur Radio on the International Space Station. But it all had to have a beginning and from its earliest days on-orbit until it disintegrated in the sky above Texas the space ship Columbia and ham radio have shared history together. Now the Columbia is now gone, but the world of Amateur Radio will never, ever forget it or the seven human beings who were on it when it met its firey demise. (From the combined thoughts of the worlds radio amateurs as posted to various Internet remailers, by e-mail and numerous other sources.)

***

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). In article <Xns931CD1AFBE333pookster@216.168.3.50>, W7TI <jamspam@upyours.now>
writes:

>Isn't there still a two year waiting period before a call can be
>reassigned? There is a small but non-zero chance the call is within that
>period.
>
The wait depends on who had the call previously. This is done to give family
members preference towards reissue of a call held by an SK family member.

It is my understanding that back in the mid-70s or so, FCC stopped routinely
reissuing callsigns that had been issued sequentially. IOW, when FCC reached
WA3ZZZ, they went on to WB3AAA, even though there were a number of calls in the
WA3AAA-WA3ZZZ block that were no longer held. This method hasseveral
benefits:

- Less work for FCC
- New hams almost all get new, never-held-before calls
- Maximizes the chances that former holders of calls (like WA3URR) can get them
back through the vanity callsign program.

Just say your call sign. The "for ID" is unnecessary. Afterall, the
purpose of saying your call sign is for identification anyway.

Training and exercise. To put the amateur volunteers into the EOC and
exercise their skill and equipment, and to show their customer their
capabilities. Makes perfect sense to me, I only wonder why it took so
long to do it.

EOC stations are usually full-blown stations with
> high power capability, good antennas, and all the coffee and donuts you
> can consume.

Sounds like an official bulletin station.

What does operating from one of these stations prove from
> a standpoint of true emergency communications capability?

Larry, what is the point of any emergency exercise?

The operators
> at EOC's are usually the most obese, chain-smoking, technically
> incompetent and personality-challenged hams you'll find on-the-air.

Maybe they're good emergency communicators. We'll see.

AFAIC,
> giving them their ever-so-appropriate "F" (for Failure) category is a good
> idea -- so us guys out there in the field will know who to avoid!

Avoid? Like in your "broken leg on the mountain side" scenario?
Refusing help from a no-coder? Fine, just lay there and die.

However,
> if they add a rule stating that any EOC-station must change operators at

> least every four hours, and are not permitted to use HF SSB, then I'd begin

> RIGHT Attitude...all others are of inferior status.

The way the tests are given, one does not have to know the material to pass it. Also, the general class incorrectly indicates more technical competence, when all it really does is proved one passed a Morse code test.

> Apparently there is considerable dichotomy in The Ham, shown
> by extreme conservatism and rigidity in activities versus the
> more liberal who consider The License as a mere regulation to
> allow them entrance to the enjoyment of a recreational activity.

>This is particularly true
> of those who manifestly support traditions of The Ham as they
> existed before their own life experience began.

HAM radio is a cult. Others have an AMATEUR radio licence. Those that believe in the traditions of Ham also believe in rigidity in activities to fit those traditions. The often use absurd rationalizations to justify their views.

One example is when my club showed that they homebrewed. They posed for a photograph (several months before I joined), got listed in QST. Then after the cameras were gone they went onto their normal activities, as they weren't interested in homebrewing. I asked people if they wanted to do any homebrewing projects and no one wanted to do any. So, the photograph pictured something that was not really there and gave a false impression.

More recently, my local club thought about getting loaner HTs for new Hams. In the newsletter, they said the main purpose was to promote Ham radio and "the advancement of the radio art". I can see HTs promoting HAM radio, but I did not see these actions or any others related to "the advancement of the radio art". This was so absurdly incorrect, I wanted to point this out to someone in the club, but I though it wouldn't be worth it. Also at least one other person told me he did not see the point, but there was no discussion on the matter, as this is a HAM club. I'm going to "let" my membership expire.

These phrasings are <the rationalizations> used. They are incorrect, but make them look good to those who do not investigate its accuracy.

>All must march to
> the drumbeats of the extreme conservatives in this service in
> correct mental uniform bearing proud medalions of extreme
> radio accomplishments (DXCC, WAZ, etc.) in order to Push

> The Envelope and advance the state of the amateur radio art.

There's that phrase again. Yes, they use rationalizations to say that
contesting contributes to "advancement of the state of the amateur radio art".
Also, acommplishments are all of this type: DXCC,WAZ, etc).

>Extreme conservatives rigidly enforce "fun" according to their
> directives and definitions. "Fun" is the absolute correctness
> of their slavish devotion to tradition, lore, mythos as dictated.

Well put. That's correct.

>Liberals of The Ham are, well, more liberal. They are only
> having their own fun, enjoying a technically challenging
> recreational activity involving radio. They are not slavishly
> tied by conservative bonds. According to extreme

> to be worthy of The Ham. Why is that?

> Indeed, why are the liberals of The Ham not affected during
> the Transformation? The Test is the same. The Certificate
> is the same. Yet liberals are considered inferior.

You cannot simply be a radio amateur. You must follow the Ham traditions to be
a <true> "Ham".

97.119 Station identification.
(a) Each amateur station, except a space station or telecommand station, must transmit its assigned call sign on its transmitting channel at the end of each communication, and at least every ten minutes during a communication, for the purpose of clearly making the source of the transmissions from the station known to those receiving the transmissions. No station may transmit unidentified communications or signals, or transmit as the station call sign, any call sign not authorized to the station.

Nothing there "for ID" you do ID when you simply state ur callsign as per the rules. You can even do it in Morse as repeaters do even though they are "voice" devices.

>
> ____
>
> Also patience and timing.

Heaps of both!

> W1GKK, the only ham to ever work ALL countries,
> not just the active ones,

Interesting topic. Over the years a number of ops have held that
distinction. W6AM was one, W3GHD was another as was W1FH, all of whom
are SKs now. And George W1GKK. But that bunch is an endangered species
bordering extinction because in order to have "worked 'em all" today
the op would have to have been on the air in 1945-1946 when the HF
hams bands were reopened and 1948 when VO became the first DXCC
deletion. That's a *very* narrow window! I guess George is the last of
those Mohicans.

I've been thumping for years for a DXCC progam which has a built-in
drop-dead date, restart the whole thing every twenty years or so to
level the playing field. Goes over like the usual lead balloon every
time I bring it up.

> said the key to DXing is to "be there when
> they're there".

It was much more difficult to "be there" back then. The only heads-up
vehicles they had for getting "spots" were mailed newsletters, word of
mouth, the telephone, etc. Today all ya hafta do is Telnet into a
spider node . .

> Oddly, his accomplishment was done solely on 20 meters.

20 ssb is the centroid of the DXCC planet, I don't remember a new one
(new dxcc country) coming on which didn't operate on 20 phone right

off. There have been others who simply "parked" on 14.200 and "worked 'em all" or very close to that. A bunch of years ago I visited Bob Stankus W2VCZ in north Jersey. Huge Collins station, a 130 foot tower with a 20m Long John and that was *it*. Wouldn't work for me.

In my neck of the woods we have an easy cure for CB
ten meter intruders. I have a great old BC-610 which I
rebuilt a few years ago. When we get a local CBer intruding
on ten meters, I lay a steady nonstop 750 watt AM carrier on
top of him wherever he goes, until he gets the idea to get the
hell out of the 10m band!!!!!! Works like a charm every time.

Nice. A bit wordy, I thought, but it's good lawyerese. :-)

> Even when someone agrees with your stand it gets twisted around into
> an attack. Why does it have to be that way?

Who said it was an "attack?" I don't object to it and quite
agree with it. I didn't "twist" anything that wasn't already
on the public record. <shrug>

A problem with too many using computer-modem communications
is that they aren't biased linear...they are usually biased Class B
(right at cut-off) and generate their own intermodulation distortion
that wasn't there to begin with...or a few are running Class C
already cut-off to anything but their own personal drive, and aren't
neutralized properly. The latter frequently go into oscillation and
overheat their plates, tripping their own breakers.

An extra class amateur I worked with some time ago used to
have fun with the conservative traditionalist ham steeped in the
emotional-content cheering of ARRL propaganda. He used to

quietly state the following definition to them:

"Ham is the butchered meat of swine."

Oy veh, such a commotion it caused! Breakers popped all the way to the power distribution center! When the paramedics removed the straightjacket from the offended, all could find absolutely nothing wrong with his definition...it is true. Those too caught up in a singular definition of "ham" are already emotionally loading their brains to absolute non-acceptance of anything they don't want. No one can argue anything with those people. Their minds are made up and their lifestyle is rigidly in place, bound tightly to their Handbooks. <shrug>

Life is interesting. One doesn't need a license to enjoy it. Once in a while it IS fun to push a button now and then and watch some fury erupt like a volcano from the conservative-traditionalists in a hobby activity. They think only They can push buttons. Tsk, tsk, tsk. :-)

>If your not a MD Doctor you can't expect to discuss
>medical treatments with a Doctor as an equal.

Who is the Doogie Howser, MD, equivalent in here? :-)

>If your not a rocket scientist you can't expect to
>discuss rockets with a rocket scientist as an equal.

Tsk, tsk, tsk. I worked at Rocketdyne division of
Rockwell International for a number of years,
including some work on the SSMEs (Space Shuttle
Main Engines). No problem working with REAL
rocket scientists.

>If your not a race car driver you can't expect to discuss
>race car driving with a race car driver as an equal.

Oh, yes, I agree after watching Saturday's Bud 500
Warm-up, Dale Jr. winning with Jeff Gordon in a very
close second. Running 195+ in an automobile is
exceptional driving skill. Sorry, but I don't find any
equal to that analagous skill in ham radio here.

>If your not a Supreme Court Judge you can't expect to
>discuss law with a Supreme Court Judge as an equal.

Ahem...nobody here is the analagous equivalent of any
supreme. This ain't no "court" either, "counsellor." :-)

>So why do you try to discuss AMATEUR RADIO
>with LICENSED AMATEUR RADIO OPERATORS,
>when you don't have an AMATEUR RADIO LICENSE
>and expect to be accepted as an equal?

Tsk, tsk, tsk. Plate overload! Breaker tripped! :-)

Please...neutralize that tube final properly before
key-down, okay? The transmitter you save may be
your own...

>Get a license then we'll talk as equals, until then your
>just an outsider and your not going to be heard here!

Who wants to talk like "equals?" There's no
consensus in here on "equality." It's the conservative
traditionalists with their Handbook bible against all
others. Dichotomy. Schism. Two opposing camps
with the conservative traditionalists wanting to "rub
the others' noses in their 'business.'"

>And if that makes you think I'm one of those "spiteful
>regulars" here, who cares what you think! Your
>opinions don't count here!!!!!

Of course they don't. That's why you didn't reply to
my initial posting, right? :-)

THAT wasn't my fault, Phil. :-)

> Fortunately they are/were in a minority and there are a number of
> staffers and decision-makers who deal/have dealt with amateur
> regulatory and enforcement issues who are/were amateur licensees.

There we have it. Oddly, though, ARRL requests don't seem
to be getting through to all those staffers and decision-makers
who are/were amateur licensees. How can that be?

> But you, Len, are not a staffer or decision-maker of the FCC, nor
> an amateur license holder, present or past. What, then, is YOUR
> stake in amateur radio other than "critic from the sidelines" ?

Oh, it might be a fun hobby or something like that. You know,
a recreation thing. Not as a lifestyle, counsellor, nope...not
interested in becoming a mighty macho morseman of the
hamways proclaiming their vaunted accomplishments to all who
get tired of listening.

Funny thing...all those who shout "stay the hell out of Our place"
will, at the drop of an eyelash, pontificate in no uncertain terms
about national politics, the qualifications of any president, etc.,
etc., etc., yet they've never been IN office or made political
decisions or have any "qualifications" in political science other
than a civics high school class. :-)

Must be a "different thing" in amateur radio, right? Ham radio is
a different thing than any other radio, right? The ARS community
decides who gets in and who stays and who is important, right?
Yes, I understand perfectly well...gots to have the Right Attitude!
:-)

LOL!!!! You are joking? right Leland?

>And you talk about cowards Mopar, well what's your
> real name - address - etc. Why do you have to hide it?

His name along with mine, Twist, Chris, Jay's etc etc etc
has been blasted so many times, you must have had selective
amnesia to miss all those posts.

> I've been
> posting on this news group for a long while now using my real name,
> callsign, and I haven't had anything serious happen as a result.

Well good for you, probably 90 + % of Cb'ers don't have a
call sign, most use handles. As for nothing happening to you, Steve's address along with
mine,
twist and probably a dozen others have had them posted here, nothings happened to them
either.

>So it
> appears I have a lot more guts that most of the posters on this group
> including you. Even Doug posted using his real name and callsign at
> the beginning. If you call Doug a coward for no longer using his real
> name and callsign, well he's just taken a page out of your book, i.e.
> using made up screen nics and posting through anonymous mail servers,
> like "hotmail.com" just like you do Mopar. You call him a coward then
> include yourself.

Actually I'll call him a coward for flooding this newsgroup with all sorts of porn, foul language, obscene pictures, abusive accusatory troll posts. It's the old saying of "what goes
around, comes around" He'll get what ever the FCC thinks he deserve.
As for this newsgroup, again as others have pointed out, why are you here? You don't use a cb radio, you despise the cb band, you are defending a person that was proven to post all of the
stuff mentioned above, but he's inocent when it come to the rain report.
Well you, Doug, George amongst others have been badgering this group for years with "pirates"
"federal criminals" "keyclowns" etc etc, so now that the table has turned, you
have the gall to try to defend Doug?
You asked if Mopar tried to e mail him to find out
what happened, why? I tried to e mail him to stop the
flooding of the newsgroup, what did I get in return?
Forging of my account on this group, so you ask
did we ask him, who cares?

Ducky wunnerful. One more mindless shot at overcomplicating FD.

So I dumped the whole enchilada in last nite, all 28 pages of the FD rules .pdf file. All I need to know is my entry class this year, I already know what little more I need to know and I could care less abt the pages of rules for GOAT stations, etc. Single op, single transmitter, mains powered. How simple izzat? I think I'll be a 1B but I'm still not sure. I gotta get my lawyer into it I guess.

Then comes next weekend's ARRL CW DX contest. The rules are one page of HTML.

Yup. The ARRL sees FD as a Public Relations Event, not a contest. As a result, the rules exist to maximize PR, not to maximize fun. You can have both of course, but just remember where the priorities are.

> doesn't mean he has the right to totally trash OUR Constitution and OUR
> rights. "OUR" includes you..... Thank God we only have 2 more
> years of this crap. Hopefully we'll survive it but I have my doubts.

It that type of attitude that has
caused so much problems. Yes, you
have rights. The problem is that
people like you abuse those rights.
Every right has assumed responsibilities.

In the old days we did not have to use
government, the police or the courts.
We took assholes and non conformists
out and lynched them.

Ashcroft is a member of the Assemblies
of God, as is Pat Robertson and Adm.
Vern Clark (Navy CNO). The AG church is
one of the first churches to stand for
freedom.

The reason that we are in this mess in
the first place is that people like you
elected Clinton and other liberals. It
is the democrats who are the root of all
evil in America. They have become the
party of the well educated and the powerful.
It is now the party of the yuppies, not the
working man.

The only thing illegal about it is the fact that he is
transmitting without identifying. He cannot illegally interfere
with the 10 meter intruder as they are not licensed to be on those
frequencies, so a licensed station can transmit on top of them and
the FCC does not consider it interference.

Correct, it is not considered interference to transmit on top of an unlicensed station. They have no authority to be there so any intereference they get is just too bad.

Are both of you going to protest this crime by not participating in FD?

There are 5 pages of rules, the rest is submission and log forms, and
some Q and A. Is that too complicated?

The "GOAT" station is a great way to get some newbies or the unlicensed
on the air without disturbing the sometimes cranky more experienced
hams.(tho none like that in my club) I've found it a great compromise
setup.

Heh heh...this will be the beginning of another set of spiteful posts denouncing you. Obviously not the Right Stuff for being a strong macho morseman capable of leaping tall pileups with a single cuesoe. :-)

One has to remember the audience in here and how they Speak For ALL Amateurs. Possession of a license is a Nobel Award of Excellence In Radio that only a talented few can achieve...and morsemanship is the very Highest of the high in amateurism according to these Spokesmen of thousands. :-)

>HAM radio is a cult. Others have an AMATEUR radio licence. Those that believe
>in the traditions of Ham also believe in rigidity in activities to fit those
>traditions. The often use absurd rationalizations to justify their views.

Yes, and their rationalizations have appeared in here. :-)

Their rigidity in following lore, mythos, ancient rituals, etc. is paramount. Problem is, Paramount isn't doing a documentary on them yet. :-)

Nobody can have any fun in a hobby unless all Work and Slave at being the Absolutely Correctest Hammus Superioris as they. They define fun as being what They enjoy. All must be oriented to Their Fun or be thought perverse. :-)

>One example is when my club showed that they homebrewed. They posed for a

>that was not really there and gave a false impression.

Over in rec.radio.amateur.homebrew there's a long discussion
thread about adding a speaker to a crystal set. State of the
art? [not even state of the kindergarten radio art considering
the thread originator did not want to add any amplifier... :-)]

On ARRL Letter each week, they describe many radio
amateurs who are in other work (such as astronauts) as
"ham-astronaut" as if they were radio amateurs first, then
decided to become astronauts. ARRL uses a pinpoint
spotlight to emphasize amateur radio (for ARRL's benefit)
but that gets a bit ridiculous in PR fluffiness in print. In one
way it is excellent propaganda for ARRL, creating the
impression of connecting hobbyists to the space program
and thus the illusion of "advancing the state of the art"
through membership in ARRL.

>More recently, my local club thought about getting loaner HTs for new Hams.
In
>the newsletter, they said the main purpose was to promote Ham radio and "the
>advancement of the radio art". I can see HTs promoting HAM radio, but I did
not
>see these actions or any others related to "the advancement of the radio art".
>This was so absurdly incorrect, I wanted to point this out to someone in the
>club, but I though it wouldn't be worth it. Also at least one other person
told
>me he did not see the point, but there was no discussion on the matter, as
>this is a HAM club. I'm going to "let" my membership expire.

Two conditions apply there: First, so many are too ignorant of
radio art to "see any point." Second, the way of thinking (now
apparently the most common) is about territorial imperative in
a fraternal organization...it is "their" club and "they" decide,
based on what "they" want. They "own" the club. They decide
on all points. Period. <shrug>

Some get those two points mixed up. All discussion must be
about The Ham as amateur radio may be considered the "only"
radio activity having nothing to do with millions of other radio
transmitters in the world. Their vision of amateur radio (which
must be shortened to "ham" because the "amateur" adjective
is somehow repugnant) is defined and detailed only in official
amateur radio publications and advertisements.

Those who think for themselves are unwanted. They are not
of the glorious group who want to be movers and shakers. In
short, they've become just another fraternal order.

>These phrasings are <the rationalizations> used. They are incorrect, but make
>them look good to those who do not investigate its accuracy.

IMAGE is everything. :-)

>There's that phrase again. Yes, they use rationalizations to say that
>contesting contributes to "advancement of the state of the amateur radio
>art". Also, acommplishments are all of this type: DXCC,WAZ, etc).

It's part of the certificatism...show and tell for adults.

Never mind that half a century ago HF communications was the
primary means of worldwide radio communications and done by
commercial, military, and government communications people
on a 24-hours-a-day, 7-days-a-week basis. [I was there, doing
that, but a minor player in that later game wants only to quibble
about phraseology...:-)]

Part of that is confusion of REAL state of the radio art with just
personal accomplishments. There's nothing wrong with the latter,
but HF comm has been done continuously since before WW2 so
"DXing" goes into the personal fun category. State of the Real
radio art it is NOT. Such was done before most newsgroupies
here were born.

Certification complexes are about Image...pointing to pieces of
paper to show others they are a Somebody. :-)

In about four decades of designing electronics circuits and
systems, I've never once had any electrons or fields and waves
be impressed by certificates or titles or rank or emotion. They
just shrug their little physics shoulders and go "echhh" and
won't do your bidding unless you obey their physical laws. :-)

>>Extreme conservatives rigidly enforce "fun" according to their
>> directives and definitions. "Fun" is the absolute correctness
>> of their slavish devotion to tradition, lore, mythos as dictated.
>
>Well put. That's correct.

...but saying so arouses Fury and Contempt among the
traditionalist conservatives of The Ham, doesn't it? :-)

QED. Not a "Q code" but the Latin acronym for 'quod
erat demonstrandum,' or "it is as demonstrated." The
utter Contempt demonstrated by these conservative-
traditionalists (who fancy themselves "spokespersons"
for thousands) on others not following their dictates is
almost wondrous to behold.

>You cannot simply be a radio amateur. You must follow the Ham traditions to
>be a <true> "Ham".

Quite so. :-)

Not only that, one cannot possibly say anything about the
hobby without first obtaining an amateur license! Nobody
can "understand" them or radio without that certificate even
though they are in a minority of all radio users and have
been so for over a half century. Remarkable demand.

The unfortunate part of it is that these conservative-traditionalists are trying desperately to lead when they are holding back, contemptuosly exaggerating their expertise when they are largely ignorant, demanding respect and admiration for accomplishments which are not of scientific or physical importance. They have, as you've already observed, established themselves as quasi-cult-leaders in worship of the past.

Cults transcend hobbies and recreation. Cultists give themselves over to all-embracing lifestyles. One must be of their faith or be dismissed as unbelievers. Those not of The Faith are heretics and must be burned at the stake to purify them. :-)

<buzzygirl@REMOVETHIS.attbi.com> writes:

>Len is a mystery. He's obviously knowledgeable about some things, so why
>does he waste so much time criticizing this hobby?

Wrong, Jackie, since I have no amateur radio license (only a
commercial one) "I cannot possibly know anything about ham
radio." You've heard the words in hear, shouted at tops of
little lungs, overdriving their tiny amplifiers.

>I place him and Vipul in
>the same category- I respect them for their knowledge of electronics (which
>I know little about presently) but disdain their efforts to slam people who
>are in this hobby.

Tsk, tsk, tsk. Out of 670 thousand or so licensed radio
amateurs in the USA there are only a handfull of
newsgroupies who've staked out this territory as "theirs."
They (and ARRL) "represent" thousands of hams
nationwide and what they do is what all the others do.
QED.

>I have to wonder why they waste so much time. I mean,
>there are so many other things they could be doing than griping on an
>amateur radio policy group.

I have to wonder why those few newsgroupies are on a
newsgroup "wasting their time" in computer-modem
communications when they have those fabulous,
important certificates allowing them to use radio... :-)

>Griping about policies is one thing; griping
>about the perceived problems with the entire culture of the hobby is
>something else.

Gosh and golly, a desire to remove the amateur license
examination morse code test is "griping about the
perceived problems of the entire culture of the hobby?!?"

"Culture?" Yoghurt is culture. These conservative-
traditionalist newsgroupies know only Cultism, not Culture.

I never said that you don't know anything about ham radio, Len. I just wonder why you care so much about changing policies in a hobby that you don't partake in. Is it the deal that if those policies are changed to your satisfaction, then you'll join?

> Tsk, tsk, tsk. Out of 670 thousand or so licensed radio

> QED.

I never claimed such a thing, but thanks for placing me in a neat little category. As for me, I represent only myself, and I don't wish to tell others how to do their hobbies. I don't own this NG nor have I "staked it out" as my territory.

> I have to wonder why those few newsgroupies are on a
> newsgroup "wasting their time" in computer-modem
> communications when they have those fabulous,
> important certificates allowing them to use radio... :-)

That's what I'm doing now... listening to propagation come and go on 10 meters. I look at my AR license as something that allows me to communicate with others around the world and locally. I don't think of it as a license to tell others what to do, nor does it make me superior to someone who does not have an AR license.

> Gosh and golly, a desire to remove the amateur license
> examination morse code test is "griping about the
> perceived problems of the entire culture of the hobby?!?"

I don't recall taking issue with you on that, although I know where you stand on this. I am, out of respect for hams who do or do not agree with the code requirement for tests, neutral on the subject. Is it the code that's keeping you back from getting licensed? Or don't you really care to get a license? Your opinions would resonant much more if you showed at least some respect for those who have a license, not that we've asked you to bow down to us because our tickets somehow make us 'better than you'. Ridiculous.

> "Culture?" Yoghurt is culture. These conservative-
> traditionalist newsgroupies know only Cultism, not Culture.

Cult? Gee, if I would've thought that I was joining a cult, I would not have bothered to get an AR license. "Cults" consists of pods of people who are usually brainwashed by a central authority figure who commands power and demands obedience of those who are in the cult. I don't see any of that in amateur radio. So some people are drawn to various aspects of AR and that may seem odd to those outside the hobby. So? The ARRL doesn't tell me what to do. I joined them of my own free will. The FCC lays down some rules to keep the bands running smoothly for all that use them. This doesn't elicit the appellation of "cult" to me.

Now that just smacks of paranoia. I have no desire to kick you or anyone else out of the newsgroup.Not that I could anyway, but even if I could, I wouldn't. If I don't want to read what someone posts, then i'll killfile them, but that's an extreme measure as far as I am concerned, and one I reserve for the abusive and for trolls. I have no problem with anyone having their opinions and I will not attack you personally for having them- but I do think you think too much when it comes to this subject. Geez Len, lighten up a bit man.

> "Proselytes?!?" To be against rigid cultism? Tsk, tsk.

Do you think you are accomplishing your goals against rigid cultism here, Len? If not, then what remains to be done?

> Who was "criticizing your own pursuance of hobby goals?"

What if I happen to like some aspects of AR that you hate? I fail to see how that reflects upon you anyway, however.

> The criticism was on the newsgroupies in here for their

That may be true of the church but is not true of either Ashcroft or Robertson. We should never ever under any circumstances have any individuals in this country -- citizen or not -- locked up without the ability to communicate with family or an attorney, or not be able to communicate with an attorney privately, or to be locked up without charges.

These are Constitutional rights: The right to legal Consul. The right to a speedy trial. Innocent until proven guilty. The right to know the charges against you.

We are a nation where the phrase "prove your innocence" was something only the grossly ignorant would say.

We were once a nation where one could speak to your attorney without being listened in on.

We were a nation where anyone on our soil -- citizen or not -- was given equal protection under the law.

All those things are relics because of your "religious man" Ashcroft.

No, I have no love for clinton, but evil is the root of all evil in america. Ideology -- left or right -- is a convenient place to hide your evil. Clinton was dangerously irresponsible. Ashcroft is

dangerous. Clinton's sexual exploits won't scar america 100 years
from now, but Ashcroft just might.

Some people are into it for the hobby and others for the services, yet
others are in it for both.

Where in part 97 does it say hobby ?? (nope)
Where in Part 97 does it say service ?? (yep)
These and many other debates such as WAA6XYZ for ID can be found in part 97
of the FCC rules and Regs.
http://www.arrl.org/FandES/field/regulations/news/part97/

And if we don't believe the FCC -- who do we believe ??? You, me, them, us
??
No smart retorts accepted

Where in part 97 does it say hobby-type operation is forbidden?
Where in part 97 does it say operations must be service-oriented?

But you are dodging the issue -- the FCC sez we are the

Part 97 definition 2) Amateur radio services. The amateur service, the
amateur-satellite service and the radio amateur civil emergency service.

So that is good enough for me. Of course we conduct hobby type operations
but as Part 97 sez we are in their eyes as in the definition 2) above.

I know. It's been argued forever and never settled. The FCC "knows"
it is hobby/service/education/etc and doesn't much care what we do
with it, within reason. The only thing that really gets their undies in
a twist is when we interfere with commercial or emergency services.
That will get you a knock on the door in a hurry.

Otherwise, kick back and enjoy whatever rings your bell.

If it is a service ONLY does that make all who
are in it service men/women? Will that qualify
me for a GI loan?

The way I see it it is the Amateur Radio SERVICE.
And we who are licensed are in the hobby of
radio in that service. And we can do the community
a SERVICE by putting our hobby to work during
times of need. But we don't have to because the Part
97 does NOT say you MUST do emergency service
to be a ham.

An amateur radio operator may not interfere with any signal,
regardless of whether it's a legal transmission or not. You might want
to look through part 97 again...

> my initial posting, right? :-)

Sorry I normally don't read your initial posts just the
later ones but I'm afraid I'll not be doing that any more.
You don't answer the points made, you just sling crap,
and try to put down the other person by attacking them.
I have had a nice qso with Larry K3LT and found him

to be a very nice person even though he doesn't sound
like that here sometimes. You on the other hand will
NEVER have a nice qso with anyone here on the radio
because you'll never "lower" yourself to become a
licensed ham operator. And even if you do become
a ham you never be nice, so PLEASE don't become
a ham and lower "OUR" standards by your presence.

I can only please one person per day.
Today is not your day.
Tomorrow is not looking good either.
-- Dilbert

Hrm..

a 1x2 call... and he's a no-code tech? Methinks BC-610 is full of crap.

Last time I checked, only Extra class operators could have 1x2 and 2x1
calls.

But then again, what do I know? I'm just a HAM and a CBer and a Truck
Driver and a computer geek....

Of course he is. A real ham would go to www.qrz.com and look it up, click on "detailed info" and see what class the call was. A CB'er would be clueless.

1895. Davies arrested again!

Newsgroup: rec.radio.amateur.policy
Date: 2003-02-10 01:36:36 UTC
From: llgpt@aol.commcenter
Message-ID: <20030209203636.11474.00000463@mb-cl.aol.com>
Source record: 60880

Police arrested Lloyd A. Davies, a 27 year old white male, resident of Athens, Alabama in the Anderson Pumpkin patch at 11:38pm Friday. Davies will be charged with lewd and lascivious behavior, public indecency, and public intoxication at the Athens Municipal Courthouse Monday. The suspect allegedly stated that as he was passing a pumpkin patch, he decided to stop. "You know, a pumpkin is soft and squishy inside, and there was no one around here for miles. At least I thought there wasn't." he stated in a phone interview from the Athens Municipal Courthouse Jail.
Davies went on to state that he pulled over to the side of the road, picked out a pumpkin that he felt was appropriate to his purposes, cut a hole in it, and proceeded to satisfy his alleged "need". "I guess I was just really into it, you know?" he commented with evident embarrassment. In the process, Davies apparently failed to notice the Athens Municipal police car approaching and was unaware of his audience until officer Brenda Taylor approached him. "It was an unusual situation, sure." said officer Taylor. "I walked up to (Davies) and he's... just working away at this pumpkin."
Taylor went on to describe what happened when she approached Davies. "I just went up and said, 'Excuse me sir, but do you realize that you are screwing a pumpkin?' He got real surprised as you'd expect, and then looked me straight in the face and said,
'A pumpkin? Damn, I thought it was my neighbor's cow".

Mr. Davies will be arraigned in Superior Court Monday February 10, 2003. No bail has been posted as of this time, as Mr. Davies has said to the jailer, "me and Big Bubba is good friends".

True abut the 2x1 calls, but it is still theoretically possible for a 1x2 to
not have an Extra. However, a non-Extra 1x2 would probably be in his 90s today.

Ok.. here it is...

ï¿½97.101 General standards.
(d) No amateur operator shall willfully or maliciously interfere
with or cause interference to any radio communication or signal.

Excerpted from:
http://www.arrl.org/FandES/field/regulations/news/part97/b.html
---

This regulation does not state anything about the legality of the
existing signal being interfered with... it says ANY COMMUNICATION OR
SIGNAL..

Hope that clears that up...

-SSB

P.S. That search took around three minutes.. You could have looked it
up yourself, Dave.

vanity call? Not likely.. If he were a Tech, the only options open to
him are 1x3's and 2x3's... no 1x2's or 2x1... apparently, Scott, you
don't know a whole heck of alot.

Besides, looking the callsign up on QRZ reveals he's an amateur Extra,
so even then BC is still full of BS. UC?

That's in So Cal if you didn't know. I'll be there,
whether the Bronco will be done, not sure. The boss
figures it will take only three to four weeks to put
it back together after the body shop then paint job.

>it

For once, something we can agree on, if for different reasons.

>Also, the general class incorrectly indicates more technical competence, when
>all it really does is proved one passed a Morse code test.

Then you go and blow it. The General class license is three parts. Your
assertion that "all it really does is proved one passed a Morse code test" is
FALSE.

One must first pass the Technician AND General Class writtens, and then
must pass the Morse Code test.

Ergo the code only accounts for 33 1/3 percent of the context of the test.

>HAM radio is a cult.

You are an idiot. Fair trade.

>Others have an AMATEUR radio licence. Those that believe
>in the traditions of Ham also believe in rigidity in activities to fit those
>traditions. The often use absurd rationalizations to justify their views.

I "believe" in the traditions of "Ham" radio, and am anything but "rigid"
about how one must be active in Ham Radio.

>One example is when my club showed that they homebrewed. They posed for a
>photograph (several months before I joined), got listed in QST. Then after
>the
>cameras were gone they went onto their normal activities, as they weren't
>interested in homebrewing. I asked people if they wanted to do any
>homebrewing
>projects and no one wanted to do any. So, the photograph pictured something
>that was not really there and gave a false impression.

No, Vipul, what it demostrated was that you ARE wrong about your assertion
of "rigidity". They spent some time doing one thing, then moved on to another.
That YOU only wanted to talk about nothing BUT homebrewing is evidence of YOUR
"rigidity".

How's it feel to be poster boy for your own rants, Vipul?

>More recently, my local club thought about getting loaner HTs for new Hams.
>In
>the newsletter, they said the main purpose was to promote Ham radio and "the
>advancement of the radio art". I can see HTs promoting HAM radio, but I did
>not
>see these actions or any others related to "the advancement of the radio
>art".

"Advancement of the radio art" is MORE than homebrewing or doing what Vipul wants to do. It's about public service activities...It's about Emergency Communications...It's about that "fostering good will" thing in 47CFR97.1.

>This was so absurdly incorrect, I wanted to point this out to someone in the
>club, but I though it wouldn't be worth it.

You have a real problem with NOT talking to the people you have to be face-to-face with, but somehow think that people in this NG give a rat's-kazoo about your local politics, Vipul.

I think you need to see an orthopedist about that weak spine of yours, Vipul.

>Also at least one other person told
>me he did not see the point, but there was no discussion on the matter, as
>this
>is a HAM club. I'm going to "let" my membership expire.

What club is it, Vipul? I want to join just so we can vote you out first.

>These phrasings are <the rationalizations> used. They are incorrect, but make
>them look good to those who do not investigate its accuracy.

You MEAN they don't check with you first to see if it meets your approval?

>>Extreme conservatives rigidly enforce "fun" according to their
>> directives and definitions. "Fun" is the absolute correctness
>> of their slavish devotion to tradition, lore, mythos as dictated.
>
>Well put. That's correct.

Vipul, here's a hot flash: The creep you are lauding is a known, documented pathological liar. He cannot tell the truth to save his or anyone else's life.

Lennie, like you, hate's Amateur Radio. He hates it because "Joe Average Citizen" can do things with radios that he wants others to believe takes a college degree to do.

>You cannot simply be a radio amateur. You must follow the Ham traditions to
>be
>a <true> "Ham".

If you believe this, Vipul, it's only you and Lennie who DO believe it.

I don't do Wouff Hong ceremonies, nor do I have a dozen DXCC pins hanging from a ballcap or Shriner's vest...But I AM a "true Ham".

Too bad you can't be one too.

I'd say he's guessing pretty accurately...otherwise you are again lying
about your skill and prowess in the world of the tron...since if you had "made
any attempt", you'd be licensed. Since you are not and you insinuate you did
"attempt" it, you obviously failed.

Just as I surmised.

Putz.

Suggest you call the FCC and ask them. They will tell you a
licensed station transmitting on top of an unlicensed station is
not considered interference.

Don't get excited about Lennie's "tour of duty" at Rocketdyne. I bet Lennie's "experience" working on the main shuttle engine was nothing more than pulling the tarp over it as the REAL engineers went home and Lennie tended to his janitorial duties.

You actually hear words "in hear"? Really? Shouted words? You need a
rest, Leonard. You don't know any more about amateur radio than someone
does about driving a BMW having known a few BMW owners or from reading
the owner's manual.

Here's a QST for your QED: There are nearly 300,000,000 people in the
U.S.
What percentage of that number have posted over a number of years in an
amateur radio newsgroup? Of that tiny percentage, what percentage feel
that they are called to be uninvited advocates for change in amateur
radio licensing?
Tsk, tsk tsk.

> >I have to wonder why they waste so much time. I mean,

That issue is all but gone from everyone's radar. The remaining 5 wpm test is absurdly easy and even it will be gone in short order. You've already forgotten your issue of the licensing of children. Are we leaving out any other gripes you've aired in recent weeks? Be honest. Google knows.

He can't keep his own stories straight at this point. Len has told us
in the past that he has never taken an amateur radio exam. If he wasn't
telling the truth--well, it wouldn't be the first time.

Like the morons who deliberately call CQ in CW on top of DX stations that
are in the phone subband in their own countries, but in the US CW subband.
But that is illegal, though.

I bet your laughing your ass off, your laughing at the stupid post you just made beleive me I am laughing at you too, the hypocrite that you are, listen to what your queer ass is saying how are my screen names anonymous? It is no more anonymous than the name you use, and If I was so anonymous how do you have a total of 550? names. You know the ones you see they say comcast on them and have my ip on them. but if i am so anonymous how do you keep track? Obsession comes to mind a fairy from san fran has fell in love with me and I can't get rid of him. he counts my screen names that is so sweet of you ... Glad I got your name mr. mark beck otherwise i would feel a little uneasy not knowing who the obsessed cross dressing stalker that was watching me and keeping track of my every post.

From K4YZ:
>>The way the tests are given, one does not have to know the material to pass
>>it
>
> For once, something we can agree on, if for different reasons.

> One must first pass the Technician AND General Class writtens, and then
>must pass the Morse Code test.

One does not have to understand the written test for the Technician class or the General Class. One must know Morse at 5wpm. Therefore, all the General Class proves is one passed the Morse code test, not higher technical competency.

>>One example is when my club showed that they homebrewed. They posed for a
>>photograph (several months before I joined), got listed in QST. Then after
>>the
>>cameras were gone they went onto their normal activities, as they weren't
>>interested in homebrewing.
>
> No, Vipul, what it demostrated was that you ARE wrong about your
>assertion
>of "rigidity". They spent some time doing one thing, then moved on to
>another.

That's incorrect. If I ask anyone in the photograph still in the club if they want to do a homebrewing project or even if they were the slightest bit interested in a homebrewing project under any situations, every one of them would say they are not interested. The photograph is an inaccurate portrayal of club's activities.

So, they did not "move on".

> "Advancement of the radio art" is MORE than homebrewing or doing what
>Vipul wants to do. It's about public service activities...It's about
>Emergency
>Communications...It's about that "fostering good will" thing in 47CFR97.1.

The phrase "advancement of the radio art" means technical achievement. It does not mean public service, emergency communications, or fostering good will. Fostering good will is a means, but is not in itself "advancement of the radio art".

> You have a real problem with NOT talking to the people you have to be
>face-to-face with

The decision was already made, so what's the point. I told people I am not interested in Morse code. I also said I am not a "Ham" to someone that knows I have an amateur radio license.

>>These phrasings are <the rationalizations> used. They are incorrect, but
>make
>>them look good to those who do not investigate its accuracy.
>
> You MEAN they don't check with you first to see if it meets your
>approval?

No, I mean absurdly false statements or arguments used to support one's viewpoints. One example is that loaner HTs is evidence of "advancement of the radio art". Another example is posing for a homebrew photo and hating homebrewing. Not liking it is fine. But, to not like homebrewing, and then pose for a homebrewing photo, (possibly for publicity reasons), is wrong. Stating such goal of the club so an outsider will be impressed, while disagreing with it in reality. These are examples of rationalizations.

>>You cannot simply be a radio amateur. You must follow the Ham traditions to
>>be
>>a <true> "Ham".
>
> If you believe this, Vipul, it's only you and Lennie who DO believe it.

I've seen this everywhere. Its only Hams that cannot see themselves as others see them. I even knew one lab person was a Ham a while before he even mentioned it just by the way he was stating his interests. At the four closest clubs, from listening to Hams in several states on long trip, and at Hamfests in MA, NH and CT - all show evidence of the common cult of Ham. No one pointed this out to me. I observed this on my own. How would I come to this conclusion, if it did not exist?

Ok, JJ, I'll repeat it again...

Ok.. here it is...

ï¿½97.101 General standards.
(d) No amateur operator shall willfully or maliciously interfere
with or cause interference to any radio communication or signal.

Excerpted from:
http://www.arrl.org/FandES/field/regulations/news/part97/b.html
---

This regulation does not state anything about the legality of the
existing signal being interfered with... it says ANY COMMUNICATION OR
SIGNAL..

Hope that clears that up...

-SSB

--

ï¿½97.19 Application for a vanity call sign.

(c) Unassigned call signs are available to the vanity call sign system with the following exceptions:

(1) A call sign shown on an expired license grant is not available to the vanity call sign system for 2 years following the expiration of the license.

(2) A call sign shown on a surrendered, revoked, set aside, canceled, or voided license grant is not available to the vanity call sign system for 2 years following the date such action is taken.

(3) Except for an applicant who is the spouse, child, grandchild, stepchild, parent, grandparent, stepparent, brother, sister, stepbrother, stepsister, aunt, uncle, niece, nephew, or in-law, and except for an applicant who is a club station license trustee acting with the written consent of at least one relative, as listed above, of a person now deceased, the call sign shown on the license of person now deceased is not available to the vanity call sign system for 2 years following the person's death, or for 2 years following the expiration of the license grant, whichever is sooner.

--
The two-year wait derives from the license grace period - if a ham lets the license lapse, the call is not lost until the grace period is up.

(3) pretty much says it all, about reassigning an S-K's call. Two year wait unless you're a close relative and can provide documentation.

Perhaps just a clerical mistake at FCC. How long since he passed away?

Funny, I missed most of them, and the ones that I did see, showed
someone blasting a name, but no one confirming it (And in most cases
denying it). I could say that your name is Fred Smith, and if you
neither confrim or deny it, does that make it true? Even if you do deny,
how do I know you're not lying?

It's a fact that many of our more vocal "outlaws" hide behind their
anonymity. I suspect that they're not to proud of what they portray,
outside of this group.

I don't recall anyone posting Twisty's real name. I'm sure he wouldn't admit to it. Although Doug must know him, to be able to send him that jockstrap trophy that gets mentioned from time to time.

> old saying of "what goes around, comes around" He'll get what ever the FCC > thinks he deserve.

Since we were on the topic, what makes you so sure that Doug was responsible for all of the porn flooding etc, that occured on this group? You're recently been found incorrect, when you assumed that Smokey was another of George's nics, so how foolproof are your "sleuthing" abilities? Hopefully, better than Twisty's, but even you have to admit that if someone wants to remain anonymous, they can certainly do so.

Once someone becomes known as the "de-facto" spammer, it's easy for others to jump on the bandwagon, knowing that it will get blamed on Doug, in this case. And the other spammers can enjoy their anonymity. Still others like to "stir the pot" by doing things that will get others in trouble, and perpetuate on-going hostilities. This newsgroup in no different in that respect.

I wouldn't jump to any conclusions until the facts are presented.

Exactly my point.

I got to the page which shows the entry summary & submission form and
got a massive dose of the giggles, the whole package is Newington's
incarnation of the long-form 1040. FAQs and all.

I'll be in it and yes it will be a contest and it will be fun despite
Newington. Whether I'll bother filing their bloated 1040 after it's
over is an open question, odds are I won't. But maybe if they passed
out 100 bonus points for trudging thru it . .

Well Dave, if you haven't noticed this is
a cb newsgroup, hence the cb handles being
used. As for names being posted here, it's all
in the "archives" as some like to say, go see
for yourself.
If Smokey's George so be it, if he's not
so be it, but the fact remains Doug was flooding
this group with crap for months, again it's in the
"archives" go see it for yourself. He's even admitted
more than once, but some people have selective
amnesia.

A few have made mention to that. However, this newsgroup is not any different from any other USENET newsgroup, in that a person's credibility is automatically suspect when one hides behind an anonymous name.

I find it quite amusing, in an ironic sort of way, when someone using an anonymous "handle", has the cajones, to lambast someone else, who isn't so "secretive", about their credibility. Generally speaking, those who have more to lose, generally behave themselves more so than someone who, due to their anonymity, can make a total ass of themselves and then re-invent themselves as another anonymous nic. Where's the accountability there?

> As for names being posted here, it's all

I have neither the time nor the incination

> If Smokey's George so be it, if he's not
> so be it,

But you were originally convinced that he was, that was where you jumped the gun, and possibly tarnished an innocent person's rep, by associating him with someone else, when you were working on nothing more than a hunch. That's what I mean when I say to wait for the facts before making the connection.

> but the fact remains Doug was flooding
> this group with crap for months, again it's in the

I'm not denying that. All I'm saying is that it's likely that he was not the only one playing, and he may not have been the worst offender.

Oops, I have to correct myself. There are *3* pages of actual rules.
Page one is a cover sheet. Page 2 is a rah, rah piece. The actual rules
don't start until page

Maybe I come from the wrong side of the tracks, but 3 pages of rules
doesn't seem so bad, especially in light of the different types of
stations that might participate in FD. In the other party I'm involved
in, the PAQSO, we work hard at keeping the rules to a single page, but
the print gets small, and there are constant queries to clarify this or
expand upon that.

But that is small beans compared to FD.

Here is a challenge. come up with a one page set of rules for FD that
addresses everything. Just for grins, go ahead and ignore the EC and

GOTA sections. Make the rules explicit enough that there is no questioning them. Encompass all the different modes in use during field day.

Up to it? Obviously you could say any mode, any qso, 1 point. Nothing else. But that wouldn't be much of a contest, would it. A lot of people wouldn't care for that. IMO, a home station operating off the mains is the same thing as a EC station. So should either of those participate (FWIW, I am quite happy with both participating) Others don't like the idea, like Larry. So they want clarification. That's why there are rules. Some people want extra points to encourage Morse code use. If we encourage that one mode, then others want their favorite mode encouraged too. On and on.

- Mike KB3EIA -

glad there is something else here to discuss besides Morse and the old master fisherman

No, Don't tell me that about the gigabyte I use that board now although it is about 1- 2 years old now,I was going to buy another gigabyte board this week for 79.95. Did the board come with a cd of those drivers???? try that easy tune out you can get your proccesor smokin, oh btw, don't ever plug another hard drive in while the computer is on, the processor and power supply don't like it, they both are history... lol

>
>One does not have to understand the written test for the Technician class or
>the General Class. One must know Morse at 5wpm. Therefore, all the General
>Class proves is one passed the Morse code test, not higher technical
>competency.

So YOUR assumption is that NO ONE knows the material for the tests, Vipul?

This means we can safely assume YOU don't know anything either since YOU
are a product of the VE examining process.

>>No, Vipul, what it demonstrated was that you ARE wrong about your
>>assertion
>>of "rigidity". They spent some time doing one thing, then moved on to
>>another.
>
>That's incorrect. If I ask anyone in the photograph still in the club if they
>want to do a homebrewing project or even if they were the slightest bit
>interested in a homebrewing project under any situations, every one of them
>would say they are not interested. The photograph is an inaccurate portrayal
>of
>club's activities

Having not been there, I cannot say for certain, of course, but I am
willing to bet that the complete context was they were not interested in
homebrewing projects WITH YOU.

I've never met you in person and I'll be danged if I'd want to spend
anytime with you either based upon your whining, poorly presented rants in
here. I can only guess what you are like in person!

>So, they did not "move on".

They did not "move on" with YOU......

>The phrase "advancement of the radio art" means technical achievement.

Oh...?!?! You draw this conclusion based upon WHAT definition from the FCC
or other credible source? Webster's? Funk and Wagnall's? Encyclopedia
Brittanica? Vipul's Volumes of Voiciferous Vile Ventings?

If they meant NOTHING but advancement of "technical achievement" why
didn't they simply SAY that?

The ANSWER to that, Vipul, is that the "radio art" is MORE than
experimentation INSIDE the box...It's how to USE the box too.

>It does
>not mean public service, emergency communications, or fostering good will.
>Fostering good will is a means, but is not in itself "advancement of the
>radio
>art".

>> You have a real problem with NOT talking to the people you have to be
>>face-to-face with
>
>The decision was already made, so what's the point. I told people I am not
>interested in Morse code. I also said I am not a "Ham" to someone that knows
>I
>have an amateur radio license.

But VIPUL! Just last week you said you WERE a "Ham". What's the truth?

>>You MEAN they don't check with you first to see if it meets your
>>approval?
>
>No, I mean absurdly false statements or arguments used to support one's
>viewpoints.

You mean like your really absurd statement above about the definition of
what the "radio art" is?

>One example is that loaner HTs is evidence of "advancement of the
>radio art".

Your opinion only.

>Another example is posing for a homebrew photo and hating
>homebrewing.

You mean like your posting in an Amateur Radio newsgroup but hating
Amateur radio, Vipul?

You mean like asserting that you "support" Amateur Radio and then that
very week posting a very demeaning item in a CB radio newsgroup, Vipul?

And you have not provided any evidence that those guys "hated"
homebrewing...Only your opinion that they disliked it, which is more likely
they didn't want to be with you.

> Not liking it is fine. But, to not like homebrewing, and then pose
>for a homebrewing photo, (possibly for publicity reasons), is wrong.

You mean like politicians who pose with babies but never changed a diaper?

>Stating
>such goal of the club so an outsider will be impressed, while disagreing with

>it in reality. These are examples of rationalizations.

SInce you don't name the club, provide any references for us to see, or third parties to verify any of your assertions by, all we have is your sour-grapes whining...Which sound a lot like Lennie's sour-grapes whining about what HE doesn't get in Amateur Radio.

>>If you believe this, Vipul, it's only you and Lennie who DO believe it.
>
>I've seen this everywhere.

How come no one ELSE sees this, Vipul?

>Its only Hams that cannot see themselves as others see them.

But WAIT, Vipul...YOU are a "licensed Ham" too! How is it that YOU seem to have this clarity of vision that no one else seems to have...?!?! You are smarter or more gifted than other licensees...?!?!

>At the four closest clubs,
>from listening to Hams in several states on long trip, and at Hamfests in MA,
>NH and CT - all show evidence of the common cult of Ham.

Gee, Vipul...people oranized into clubs for common goals with common interests...Gee...THAT'S strange....NOT!

>No one pointed this
>out to me. I observed this on my own. How would I come to this conclusion, if
>it did not exist?

You have not observed ANYTHING yet, Vipul, that isn't common human nature. That you dislike it, find it offensive or otherwise inconsistent with your own goals or desires is just your tough luck.

All of these people are organized into clubs for a common interest...Amateur Radio. Some like to homebrew stuff, some like to chase awards, others like to do public service and emergency communications. If Amateur Radio offers nothing else to ALL licensees, it is the opportunity to do what you want with a radio with very few rules or constraints.

The average Amateur licensee is NOT a degreed engineer. They are common, everyday people, each of whom has their own reasons for becoming licensed. Many are licensed for no other reason than the social opportunities it provides. For some it's just a means to an end, often in emergency communications or a alternative to cellphones. And some are involved because they like experimenting with radios.

That they may or may not be involved for the same reasons as you are, as I said above, your tough luck. If Amateur Radio is not what you thought it would be or is not living up to YOUR expectations, MOVE ON!

I can tell you now with an unwavering certainty that Amateur Radio as a whole is NOT going to change for YOU! Better to move on now than to continue to subject yourself to disappointment and rejection.

Steve, K4YZ

Thanks to all for the help. I just went ahead and applied for my old call as a vanity call using the online system.

Looks like it should work, hope so, but if not, it will not be the greatest tragedy to come down the pike.

WA3URR really is a miserable call, but you guys understand--it's part of a hams identity, especially going back almost 30 years.

Oh yes, it's been expired for 10+ years.
Dave

That would be illegal due to the fact that the other stations are doing what they are licensed to do where their licensed to do it! Plus bad amateur practice as well.

>but in the US CW subband.
> But that is illegal, though.

But if a CBer is using 10m "ILLEGALLY" then if you call CQ on top of him your doing "NOTHING" wrong, you have to be legal to qualify as a "signal" or "communication" otherwise your just "noise" legally! When the FCC busts someone for being out of band they never say that the person was communicating out of band just "transmitting" out of band.

I seem to remember a posting somewhere here that the person emailed Riley and ask him this question about transmitting on top of "illegal" intrusions into the 10m band and his answer was to go ahead that as long as the other person was "illegal" they weren't considered as communications to be interfered with.

That's not the way I learned it. I learned that even if the transmitting
station is operating illegally, you have no right to interfere with it.

Not really, once you've sen his behavior here for a while. Try
opposing some of his policy views, like the idea of a mandatory
minimum age requirement for a ham license.

> > >He's obviously knowledgeable about some things, so why

It is interesting to note that they do not show any respect for
another's knowledge of electronics (or almost any other knowledge or
accomplishment) if the other person opposes their views on amateur
radio policy.

K8MN represents 1/685,000 of US amateur radio.
KC0ODY represents 1/685,000 of US amateur radio.
N2EY represents 1/685,000 of US amateur radio.

Mr. Anderson represents 0/685,000 of US amatuer radio.
>
> > >I have to wonder why they waste so much time.

Their hobby is wasting time. Your time.

Mr. Anderson repeatedly voiced strong opposition to the idea of hams
discussing ham radio policy on the ham bands. Something about it being
against free speech.

For example:

Free speech on an EXISTING INTERNET NEWSGROUP, yes.

Such free speech has been met by some, like yourself, trying to
control content through ill-mannered sarcasm and general
bullying whenever opinions are contrary to your personal views.

>> This newsgroup already exists, is public access, unmoderated.
No
>> time or frequency limit exists for communications, discussion,
or
>> participation.
>
>You'll forgive radio amateurs if they wish to discuss policy on the
>amateur bands, wont' you, Len?

No problem if those policy matters affect ONLY those who are
already licensed.

END GOOGLE QUOTE

Lots more examples in that thread. Note how Mr. Anderson interprets

"1) Set up an effective station for the amateur band and mode to be
used.
2) Obtain the necessary license by passing the required tests.
3) Operate the station in 1) as required by the governmental agency
who
granted the license in 2).

The fact that someone passes a test to obtain a license does not in
any way
indicate agreement with the test requirements."

to mean:

"In fewer words: No one can discuss the subject of GETTING IN
amateur radio without ALREADY BEING IN. That's not free speech
or free assembly, just exclusivity and limited participation."

> > >Griping about policies is one thing; griping

Please.....please...nobody tell the balding pate
chipmunk-cheeked Lloyd-da-toid about this website:

http://www.angelfire.com/ne/AntariiRescue/rabbi_rocky_show.html

If Lloyd sees it, he's liable to go on an INSANE rant across every
kook and conspiracy newsgroup known to man and then check into
the 3.860 Eastern Regioinal Pay-triots Website and blow up his HF
from loading into his 5/8th wave 2 meter vertical mag-mount he's
got pasted atop the rusty 4-drawer filing cabinet outside of his shack's
window that he "rescued" from the local auto-body shop's trashcan....

(come to think of it...DO NOT let any Liberty Netters get ahold of
the website either.....if Vic sees it, he's liable to have "depends
under-garments"
moments right up to next Saturday night.....Oy!!

Ok, lets say you're an actual judge, sitting in a court of law.
Which of the following would guide you in your decision?

1. Rules and/or laws written and documented in the Code of Federal
Regulations?
-or-
2. What someone at the FCC said on the phone?

Fill in the blank. 1.___ 2.___

Grades will be posted for all to see.

The board did come with drivers, but they were old (August), and the Radeon
9700 pro I have didn't like them. After much research, and reading about the
conflicts with the vid card in 3D mode, I found one here:
http://www.viaarena.com/?PageID=2

If you're using a GeForce or other card you probably wont need them, but if
you're using a Radeon, you might want to bookmark the site. Card worked fine
in 2D mode, but anything 3D caused the system to go into infinite loop. Only
way out of that is the reset button. Kind of silly to have a $380 video
card that wont do 3D because of a $110 board. Anyway, it's all good now.

From K4YZ:
> So YOUR assumption is that NO ONE knows the material for the tests,
>Vipul?
>
> This means we can safely assume YOU don't know anything either since YOU
>are a product of the VE examining process.

The test doesn't prove one learned the material. This does not mean no one knows the material.

So, I repeat, passing the General test only proves one learned Morse code. It does not prove higher technical competence (a common rationalization) as the license seems to indicate.

> Having not been there, I cannot say for certain, of course, but I am
>willing to bet that the complete context was they were not interested in
>homebrewing projects WITH YOU.

>And you have not provided any evidence that those guys "hated"
>homebrewing

>SInce you don't name the club, provide any references for us to see, or
>third parties to verify any of your assertions by, all we have is your
>sour-grapes whining

This is a good example, because I'm pretty sure about what people in this club are interested in. I could verify my claim, but somehow you would find fault with my methods if the conclusion did not support your beliefs.

>>The phrase "advancement of the radio art" means technical achievement.
>
> Oh...?!?! You draw this conclusion based upon WHAT definition from the
>FCC
>or other credible source?

CFR, TITLE 47--TELECOMMUNICATION, PART 97--AMATEUR RADIO SERVICE, Sec. 97.1 Basis and purpose.

> If they meant NOTHING but advancement of "technical achievement" why
>didn't they simply SAY that?

"Advancement of the radio art" is listed separately which means its different from those other aspects (also listed) that you mention. Radio "art" means technical achievement. Service and international goodwill is listed separately. Notice that trained operators, technicians, electronics experts is also listed separately. Note that electronics expert is not the same as <advancement of the> radio art.

Rationalization also involves changing the definition of words.

> The ANSWER to that, Vipul, is that the "radio art" is MORE than
>experimentation INSIDE the box...It's how to USE the box too.

Possibly, if you could give an example.

> You have a real problem with NOT talking to the people you have to be
>face-to-face with, but somehow think that people in this NG give a
>rat's-kazoo
>about your local politics, Vipul.

I just remembered, I DID mention in the forum (which gets mailed to every club member), well before they made the decision, what would be a better usage rather than the HTs.

> But VIPUL! Just last week you said you WERE a "Ham". What's the truth?

I am not a "Ham". I am a radio amateur. If I said I was a "Ham", I meant that I was a member of a Ham radio club.

>>No, I mean absurdly false statements or arguments used to support one's
>>viewpoints.
> You mean like your really absurd statement above about the definition of
>what the "radio art" is?

No, your definition is absurd.

>>One example is that loaner HTs is evidence of "advancement of the
>>radio art".
> Your opinion only.

The club stated the goal was to get people on Morse before they otherwise would have. Anyway, the definition of "radio art" was given above. Very commonly used this way, so not my opinion only.

>>I've seen this everywhere.
> How come no one ELSE sees this, Vipul?

Many others that have seen it, probably left Ham radio, not stayed around. There are a few that express similar opinions.

Here, Lenover21 states basically the same thing:
" Liberals of The Ham are, well, more liberal. They are only
having their own fun, enjoying a technically challenging
recreational activity involving radio. They are not slavishly
tied by conservative bonds. According to extreme
conservatives these liberals do not have The RIGHT Stuff
to be worthy of The Ham. Why is that? "

>Amateur Radio as a
>whole is NOT going to change for YOU!

I may be able to add to the theoretical, but unrealized potential of the other aspects of amateur radio. A few people I have met were interested in similar activities. If I could find such a club, I would join it. Otherwise, once my

current situation changes, I may be able to start an amateur radio club for those interests.

From article
http://www.msnbc.com/news/869906.asp

" ACCORDING TO THE national membership association for amateur radio, the American Radio Relay League (ARRL), ham radio volunteers are currently assisting federal, state and local officials and relief organizations in Texas in their search for shuttle Columbia debris and the remains of the crew members. "

I did not hear any mention of Ham (or amateur) radio operators, in regard to the Columbia recovery, in the news. Not one. I guess ARRL is the "inside" news organization.

"Ham radio has proven to be the only reliable communications options during the recovery effort,"
...
"The communications systems used by other federal and state organizations cannot penetrate 'The Pine Curtain' as we know it in East Texas," he said. "The dense forests and hilly terrain just swallow up most radio traffic, and even county sheriff and county fire department radio systems have serious blind spots."

Hype.

If you look more closely, this actually supports removing amateur radio privileges (to get rid of those serious "blind spots"). Not good for amateur radio.

"Three of the Columbia astronauts were licensed amateur radio operators."

Irrelevant. In any group, some of them may have amateur radio licenses. Just because they happen to have licenses, does not support the claim. It was part of their work anyway.

"Even astronaut hopeful Lance Bass of 'N Sync is a ham - KG4UYY."

I doubt it. Why does this celebrity not proclaim he is a Ham in public?

I hate to burst your bubble but I have no recollection of anything about you on air. Your saying "five nine" to me doesn't give me a lot to work with in forming an opinion of you. I don't call break the ten meter band down into separate modes and I don't call it the "kiddie band".

> Is that when you first noticed

No, that's what happens when you are busy reading between the lines instead of attempting comprehension of what is actually written. You're a real help in proving a point. Please refer to the portion above where I state, "I've never claimed to be a god".

Did you know that Windows 3.1/95/98/ME can only access 512 MB?
If you have more then that, remove the excess. Your video card
will suddenly work!!!

Windows NT/2K/XP use a different memory model and can access
more then 512 MB.

I have 768 MB in this 2K box. 1 GB in the 2.4 GHZ XP box I
just built for a friend. Intel 2.4/D845EBG2 motherboard.
Damn it's fast! XP loads in 7 seconds after the beep.

Good luck and 73, Dave. Let us know when you get your old call back - I think the lead time is about 20 days or so.

Both of my networked machines have 1 gig apiece. Both are now AMD after being an Intel fan for years and supporting them with both mouth and pocketbook.
Just retired the Intel 1.7 gig p4 in favor of an AMD XP2000 and XP2400 for my machines. Intel had SDRam and the two AMD's are using ddr ram, one at 266 and the other at 400. Both post significantly higher on all benchmarks than the intel. It also had a gig of ram, but clocked at 100, so it was a bit handicapped. I guess I went for more "bang for the buck" than outright performance. To get the same performance from Intel, the ram would have cost more than the PC.

512 MB DDR's cost about $100 a piece. You went to the wrong place.
Circuit City sells the board I mentioned for $140. It can be had
from a distributor for $90. I can undersell CC and still make $.

I won't post uP prices publicly. They change faster then RAM or gas.

So what're ya saying, Bill? If we hear a bunch of roger beeps and
"10-4 Good Buddy" going on in AM on the lower 300 of 10, we should
just stand aside and let them use our frequency allocation for their
illegal operations?

No, I think you should hunt them down and kill them. Do it in a particularly gruesome way that makes the 11 o'clock news and that should scare all future miscreants off. At your trial, Riley will testify in your favor and you will be acquitted.

Or you could just jam the living s*** out of them like you're itching to. Jamming usually makes the recipient realize he's made a terrible mistake and QRT, right?

And if you believe that last part, I have a bridge, etc, etc.

IOW pal, the cure for this problem ain't that simple.

Look up Richard Zeigler in the FBI's records - Dick lost his job at Gettysburg and was sentenced in Federal court for selling call signs in the mid-70s. That's when the "sequential call sign" ssystem was imposed, 20 years ot so before the present system "vanity" call signs were instututed as a source of revenue.

Remember, though, that there was a "pre-vanity-call" program in the 60s and 70s of issuing a 1x2 to Amateur Extra Class license holders who were licensed for 25 years or more. At first it was the next 1x2 in line. Then they started a "choose your own call" from a self-supplied list of calls. That's how I got my former 1x2 (N6SP) in 1977 which I traded in for my original 1X3 call when the "vanity" program opened 20 years or so later.

The one person who could have explained the circumstances about reissuing the deceased's call in question was Darlene Reeder, who took Dick's place in Gettysburg. She retired last month after 40 years with the FCC. so I guess that we just live with it.

That is what I paid for the ram for both machines, due to time diff.

It is obvious to any moron when you hear English transmissions,
especially below 28.3, on AM, that never ID and use all the cb
lingo, including the vulgarities, that they are not licensed hams.
A lot of them are truckers illegally using 10 meters.

> I doubt the FCC would tell you it's OK to try to jam or otherwise interfere
> with another station because you think it's there illegally.

I have had the FCC tell me exactly that it is OK, they have no
concerns about hams interfering with these unlicensed stations on
10 meters. There take is you can't interfere with a station that
has no right to transmit on those frequencies, since they are not
licensed any transmission on top of them by any station licensed
to use the frequencies is not considered interference.

>

I doubt it. Just because you might think that a station on X frequency may be unlicensed doesn't mean that the station isn't licensed. That foriegn-speaking person on the CW subband just might be a licensed ham in a country that has voice priviliges there. Or, there are a lot of frequencies where amateur use is shared with other services where amateurs have a secondary use of the frequency.

I doubt the FCC would tell you it's OK to try to jam or otherwise interfere with another station because you think it's there illegally.

Tom

They have a vanity callsign program. But there's a fee involved, on the order of $15 per ten years. You can ask for WA3URR, also if you want try for WA3U, WA3R, W3UR, or W3RR, or WU3R. WR3R. You'd then have an "extra" style call that retains some of the "flavor" of your old call.

I was issued WA2ISE back in 1976. I think that they were recycling calls back then, as my father got WB2JIA in 1972.

Larry... there is a link on the QRZ site where you/they could find out if it is available. I am offline right now as I respond to this so I can't check, but they list either callsigns totally available and another page lists callsigns getting close to getting over the 2 year waiting period. If I remember when I get home and online, I will check and post a link here.... :)

Just ID when making the initial contact with others, as they need to know who is calling them unless you know them, and every ten minutes and the end of the communication.

Examples:

W7xxx CALLING W8yyy
or
W7xxx FOR W8yyy
or
W8yyy FROM W7xxx
or simply
W8yyy, W8yyy W7xxx

At the ten minute time, just state your callsign. FOR ID is not necessary to state, but some do, some don't.

At the end of the conversation or calling a person, adding clear is not necessary but more of a semantical choice by some. Just stating your callsign covers it otherwise.

Have fun,
Ryan, KC8PMX

Regarding the age thingy.... as long as they are literate enough to read and understand enough of the material to pass the tests, I guess any age is cool. If the person is under say, 10 years old, and is sucessful at passing, and has at least a basic understanding, they ought to be applauded, as they are the exception to most of the youth out there.

As far as those between 10-18 years old..... If they, with all of the competition for their time, become interested, get involved, study and successfully pass the tests, they should be applauded as well. With sports and many other (good and bad) things out there to take as much of their schedule, it seems to me that any kid getting involved in ham radio is not going to the "problematic" kids of today, but more like the educationally gifted (nerds and other introverts), not the rap music loving/drug doing/other criminal acts type that seem to be the representative people in the eyes of today's old farts.

If a kid (whatever the definition of a kid) wants to get into ham radio, dammit, we should encourage them!!
And cultivate them into the hams that we want them to be! Then if we mold them the way we want to see ham radio going (insert favorite issue here) then we have truly created a positive future for the hobby.

My guess is that when you were a kid, the CB issue was not existant or less
of a problem as it is today. That is merely a guess as to your age, as you
may be only a couple of years older than me or may have 30-40 on me, or
anywhere inbetween. Heard of using lay-a-way programs? Perfect way to save
up for a piece of equipment while waiting. What good is the transmitter if
you can't use it yet due to the lack of license? Now a reciever would serve
more purpose in that waiting time.

Well.... ya got me there..... sort of. Let me know when you can transmit on
the ham bands with that car (less QRM created by it)

Again Bill... then what is the answer of keeping the people who have not
earned a license for the appropriate bands or services, off the air?
Referencing the ten meter problem for example.

Agreed, the "use 'em or lose 'em" philosophy. It is actually kinda crappy
that people treat 10 and 6 (for example) as only good when there is a band
opening. I have personally heard or conversed with up to a 75 mile distance
(on 6) before when there WASNT a band opening.

> The real answer would be to fill the spectrum with 'use' to

That is definitely a dream there! :) Maybe if they had more funding to do
so, that could happen???
>
> The only way I would approve of the radio registration
> at point of sale would be if ALL amateur radio equipment
> was excluded and just business radio buyers be tracked.
> That "might" slow down the number of business frequencies
> being used by non-licensed users, but I wouldn't hold my
> breath on that one!

Track all of them I say (or none at all being the only two options) both
business, public safety, ham etc. When I stated about the retailers like
Radio Shack (for example) merely showing the ham license would suffice, as
far as them recording any of what is on the face of the license is a
different arguement.

Who knows what the solution is. We have a problem in the radio spectrum, we
know it, and aren't willing to do a damned thing except complain about
it..... Guess I am living in "idealistic dream world" if expected any
positive change.

For the most part neither do I use those as listed in the first sentence. I am also in the public safety family and sometimes, especially if you are tired, accidentally mixing up the two. This just happened the other day while on the way back from a fire, and I cleared my rig and almost said my ham callsign, but bit my tongue before I got anything more than the K in my callsign out and quickly said instead "1130 clear."
Whhhhhooooopppssss!!! :)

Let's consider that question a bit.

How is a licensed ham going to wind up in court for allegedly jamming an
illegal signal? Is a freebander going to actually get a day in court to argue
that even though they were operating an illegal transmitter on an unauthorized
frequency in a method that violated several FCC rules, the freebander was
harmed by interference?

It's my understanding that 28.0-29.7 is worldwide exclusive amateur, so the
question of other services does not apply as it would on, say, 30 or 40 meters.
>

I did - and there's more odd stuff going on there.

QRZ and ARRL databases both agree on issue date of June 4, 1999, which agrees with an SK of about three years ago. But the expiration date is in 2006, which doesn't make any sense because a vanity callsign issue automatically causes a 10 year renewal. (FCC does it that way so the fee isn't pro-rated. Vanity callsign issue is the one way to get a renewal outside of the 90 day window. Moving and upgrading don't do it anymore).

So the vanity callsign must have been issued back in 1996?

Seems to me that what's needed here is a paper or CD-ROM Callbook to check up on who held what call when.

Besides Phil's account of the Ziegler callsign-selling case, there have been FCC errors in assigning ham calls. I know of at least one documented case where FCC issued the same call to two different hams. These two hams, at first unaware of each other, actually had a QSO and sent each other QSLs. (musta been a bit tense!) FCC rectified the problem.

Whether something's rotten in Gettysburg or whether it's an honest mistake, the reissue contradicts FCC's own rules. Could it be...they made a mistake, even though we are constantly reminded that FCC is "the expert agency charged with regulating all of civilian radio"? And if FCC made one mistake....could there be others??

The mind reels.

Obviously you weren't working in east texas during the last week. I was. Along with many other ham volunteers.

And of course the news wasn't picking this up. We're a support function, not the 'front lines'. And that's how it should be. There weren't big articles about what the Salvation Army or Red Cross were doing there. There weren't big articles about the highway patrol. But the National Guard search team I was was with also included a highway patrolman.

"glorious", no. But important? Yes. We were wanted and useful. Can't beat that! Even when teams had cell phones, what happened?

If the search organizers needed to contact all the search teams, net control could put one call out via ham radio and all hams would then confirm they received it individually. For 20 teams, this took about 5-10 mins max. But when contacting teams via cell phone, let's see. Most cell systems didn't work in San Augustine. And those that did were picky about where they worked. Walk a few feet and they were silent. And the person with a cell phone tended to put it in a pocket or pack and not notice when it rang. 4 hours later, many of those search teams without a ham still hadn't received the change of search protocols.

No, "ham radio" isn't the critical thing here. It was just that our "job" there was communications. We paid attention to it. We listened. And when there was something important to pass on, we did it.

In this case, there's nothing the national/local news would even bother to pick up. So it's nice that the ARRL DOES try to get some publicity for things that the hams do that help the public in time of need.

It's funny. One of the guys on my search team told me they thought that ham radio was only for 'old guys' and wasn't worth much in this modern world. He told me he couldn't believe how wrong he was (*grin*).

Once again, Vipul the Imputzable tries to "support" Amateur Radio with another dazzling display of ignorance and stupidity.

>I did not hear any mention of Ham (or amateur) radio operators, in regard to
>the Columbia recovery, in the news. Not one. I guess ARRL is the "inside"
>news
>organization.

HEY BLOCKHEAD! "MSNBC" >>IS<< the news! It's an affiliate of MSN and NBC networks.

>"The communications systems used by other federal and state organizations
>cannot penetrate 'The Pine Curtain' as we know it in East Texas," he said.
>"The
>dense forests and hilly terrain just swallow up most radio traffic, and even
>county sheriff and county fire department radio systems have serious blind
>spots."
>
>Hype.

">>HYPE<<"...?!?! What complete and utter ignorance brings you to THIS conclusion...?!?! when were YOU in east Texas and made an assessment of the terrain from which to draw this conclusion?

>If you look more closely, this actually supports removing amateur radio
>privileges (to get rid of those serious "blind spots"). Not good for amateur
>radio.

And I bet if we look real closely we can find a trace of >>HUMAN<< DNA in your genetics, Vipul, but I really don't care to strain THAT hard.

Again, from WHAT passage in that report do you come to the conclusion that this article even REMOTELY suggests that Amateurs have privileges removed...?!?!

>"Three of the Columbia astronauts were licensed amateur radio operators."
>
>Irrelevant.

Now I've seen it all. Only the most ignorant of the ignorant would consider Amateur Radio operators on the Shuttle "irrelevent" in a newsgroup about Amateur Radio in a thread about Amateur Radio operators that were killed

on a shuttle.

>"Even astronaut hopeful Lance Bass of 'N Sync is a ham - KG4UYY."
>
>I doubt it. Why does this celebrity not proclaim he is a Ham in public?

You "doubt" it..?!!? What...QRZ and Buckmaster won't work in MA..?

Vipul, your posts have gone from "dubiously uninformed" to downright stupid. It's no wonder that you can't find anyone in the NE Corridor to "play" Ham Radio with...You're an idiot ! ! ! !

I don't know when Joe Hertzberg was first licensed or what his
callsign was then but he was probably licensed in the '30s based on
his having led a bunch of antenna R&D at M.I.T. during WW2. When I
first met him in the late '50s he already had K3JH which is obviously
a vanity callsign issued well before any published vanity callsign
programs appeared. Joe just happened to be the VP who ran the huge RCA
gummint contracting empire from Camden NJ and was one of Sarnoff's
close-in buddies. I suspect his callsign was the result of engaging a
bit "suction" in the right places. No big deal, nobody dies but I
think it illustrates a point or two, "things" do happen which are "off
the books".

>knows the material.
>
>So, I repeat, passing the General test only proves one learned Morse code. It
>does not prove higher technical competence (a common rationalization) as the
>license seems to indicate.

And >>I<< repeat...Since YOU are a product of the present examining system, we can safely assume that YOU don't know the material...Just memorized the test. Which further leads me to believe that all those Hams in MA, CT, etc that don't want to play homebrewing with you probably figured out you are just trying to ride thier coattails.

Also, the code tests are also pre-prepared, and as such, can be played over and over again until one "gets" a few of the characters, enough to know which test is being used and therefore know which questions to answer. Only in a case where a person fully completes the five minutes of copy is it certain that they really "know" the code.

>This is a good example, because I'm pretty sure about what people in this
>club
>are interested in. I could verify my claim, but somehow you would find fault
>with my methods if the conclusion did not support your beliefs.

You have no idea how I would react if you were to provide names, dates, times of these club meetings and I subsequently attened one and had a chance to see for myself. I can only assume you don't want to reveal the names of these clubs for fear we will get an even more accurate picture of what Vipul Shah really is...Or worse yet, we provide some of your quotes to the members of these clubs so they can see how YOU talk about THEM!

>>Oh...?!?! You draw this conclusion based upon WHAT definition from the
>>FCC
>>or other credible source?
>
>CFR, TITLE 47--TELECOMMUNICATION, PART 97--AMATEUR RADIO SERVICE, Sec. 97.1
>Basis and purpose.

Been there...done that...in no way, shape or form does that paragraph state
that "the radio art" is solely "technical achievement".

>"Advancement of the radio art" is listed separately which means its different
>from those other aspects (also listed) that you mention. Radio "art" means
>technical achievement. Service and international goodwill is listed
>separately.
>Notice that trained operators, technicians, electronics experts is also
>listed
>separately. Note that electronics expert is not the same as <advancement of
>the> radio art.
>
>Rationalization also involves changing the definition of words.

Yes, Vipul, you ARE "rationalizing" here. You are trying to change the
meaning of words to fit YOUR agenda, when YOUR "definition" comes no where near
anything the FCC says in 47CFR97.1.

Really childish attempt, Vipul. Try again later when no one is
looking.....

>> The ANSWER to that, Vipul, is that the "radio art" is MORE than
>>experimentation INSIDE the box...It's how to USE the box too.
>
>Possibly, if you could give an example.

No "possibly" to it.

>> But VIPUL! Just last week you said you WERE a "Ham". What's the truth?
>
>I am not a "Ham". I am a radio amateur. If I said I was a "Ham", I meant
>that
>I was a member of a Ham radio club.

Uh uh uhhhhhhhh! You said you were a "ham". No changing of the meaning of
words here, Vipul! Your rules! Did you mean it, or not?

>>>No, I mean absurdly false statements or arguments used to support one's
>>>viewpoints.
>> You mean like your really absurd statement above about the definition
>of
>>what the "radio art" is?
>
>No, your definition is absurd.

Oh? You mean almost ninety years of Amateur Radio has been absurd? All
of the achivevements of Amateur Radio before Vipul Shah got a license were
absurd?

>The club stated the goal was to get people on Morse before they otherwise
>would
>have. Anyway, the definition of "radio art" was given above. Very commonly
>used
>this way, so not my opinion only.

Yes, YOUR opinion only, Vipul. I have been an ACTIVE Amateur Radio licensee, probably before you were born, and I ahve NEVER heard of ANY "definintion" of "radio art" to be ONLY "technical achievement".

>>>I've seen this everywhere.
>> How come no one ELSE sees this, Vipul?
>
>Many others that have seen it, probably left Ham radio, not stayed around.
>There are a few that express similar opinions.

Oh...You mean like Lennie the Liar? An alleged electronics engineer who can't keep his stories straight or pass an exam that gradeschoolers pass? Or maybe you mean like Brian, who doesn't know the difference between "permission to operate" and "acceptable for credit". Or we can go REALLY bizzare, and assume you mean Mark Morgan, KB9RQZ...The gay pagan Army Chemical Corps colonel who was drafted...a pretty good trick since he would have been eight years old when the draft was last used in the United States.

So far, you make absolutely assinine assertions that are completely unfounded and unsupported by corroborating evidence or testimony.

>Here, Lenover21 states basically the same thing:...(SNIP)

You really HAVEN'T been paying ATTENTION, have you, Vipul?

Leonard H Anderson, "Lenover21", is a documented pathological liar. He has made hundreds of statements and assertions that have been found to be untruthful. He is NOT an Amateur Radio licensee, does NOT participate in ANY organized Amateur Radio activity, and continues to make blatantly false statements and assertions in THIS forum which he refuses to validate.

Is THAT the best you can do for corroborating support for YOUR stuff, Vipul?

When one quotes a KNOWN pathological liar as his source reference, do you know what that does to his OWN credibility, Vipul?

Better wake up and smell the coffee, Vipul.

>I may be able to add to the theoretical, but unrealized potential of the
>other
>aspects of amateur radio

I doubt it. So far you've "dissed" almost every aspect of it and offered nothing in return for your "criticism".

If experimentation is your sole interest, Vipul, just send your Amateur ticket back to Gettysburg, then apply for "experimental" licenses as the need arises...that way no one will mistake you for "one of those hams...".

Lennie:

I only "shot down" the officers who needed "shooting down." I had a lot of very close and satisfactory working relationships with officers and Senior NCO's who recognized and appreciated my talents, abilities, and willingness to give my best effort to accomplish the mission. The only ones I had problems with were the ones who were uncomfortable with the fact that I was working rings around them, and making THEM look bad in the process!

I don't "fantasize" about radio whatsoever, Lennie! However, I DO have over two decades of varied experience as an Amateur Radio Operator, and am thus qualified to render my judgments and opinions on topics related to that field. You, OTOH, are definitely NOT! So, why don't you get your ticket, spend a few years on the air, and then come back and try again! You may find some of us a bit more interested in what you have to say!

Hey pinhead....a licensed ham transmitting over some clueless cber
like you operating illegally on 10 meters isn't malicious
interference, it isn't even considered interference.

Ryan
The school I work for threw away in the dumpster several PC's.
I salvaged as many as possible and even got several working
again (some already were) I have now donated 3 to our local
ham radio club. http://www.qsl.net/kb9ohy/ One is going to be
used to revive our club's packet station and 2 are going to be
used for logging during Field Day. I've got another one on the
floor of my shack right now looking for a use for it, I'm thinking
SSTV or PSK-31. And I have sold several whole PC's and
even more boxes and parts, just from their disposal of
some "junk".

It always pays to look inside the dumpster when you're
making a drop-off ;^)

That isn't the real question, YoYo. The question raised by some elsewhere (including you, I believe) is whether it is UNACCEPTABLE to add the words "for ID" after the callsign. No, the words "for ID" are not required by FCC rules (and nobody has said they are), but it still remains for you to show it is unacceptable. After all, that is your real premise, isn't it?

Not too complicated, considering all the ground to be covered. The
rules themselves only take up 3 pages.
> >>

Gotta remember that the 28 page packet is meant to be self-contained.
Log sheets, summary sheets, W1AW schedules and freqs, typical
message-to-the-SCM formats, handouts for the general public,
explanations of basic stuff for the clueless, etc.
> >
> > I'll be in it and yes it will be a contest and it will be fun despite

Summary sheet is one page. Entry class, how many contacts per
band/mode, bonuses, signature. Ya don't even hafta send in a complete
log, just a dupe sheet.

> > But maybe if they passed
> > out 100 bonus points for trudging thru it . .

> the print gets small, and there are constant queries to clarify this or
> expand upon that.

Whole point of FD is "something for everybody" which means lotsa
rules. Can't get away from it. The new Class F will hopefully do two
things:

1) Get more EOCs on-the-air during FD, which is better than having
them gather dust

2) Generate publicity both in the media and among govt. types.

Are either of those a bad thing?
>
> But that is small beans compared to FD.
>
> Here is a challenge. come up with a one page set of rules for FD that
> addresses everything. Just for grins, go ahead and ignore the EC and
> GOTA sections. Make the rules explicit enough that there is no
> questioning them. Encompass all the different modes in use during field day.

On one page? Easy, just use a little tiny font.
>
> Up to it? Obviously you could say any mode, any qso, 1 point. Nothing
> else. But that wouldn't be much of a contest, would it.

Nope. One of the whole points of all those rules is to give lots of
alternative ways to make points so nobody is left out.

I remember when the rules were much simpler. Four entry classes: ABCD.
1 point, any qso any mode. Multiplier for emergency power, small bonus
for message handling, that's it.

Result was that most FD operations consisted of gas engine generators
powering SSB transceivers, some antennas and not much else in the way
of radio stuff. A beginner might get a shot at a rig around 3AM on a
dead band. Satellites? GOTA station? Publicity, natural power, new
modes? Ferget it, no points, not worth the effort.

Having all the catgeories and such is meant to widen the scope of FD.
Not a bad thing.

There's also the perennial problem of folks not understanding the
rules, no matter how clearly they are written.

> A lot of people
> wouldn't care for that. IMO, a home station operating off the mains is
> the same thing as a EC station. So should either of those participate

> (FWIW, I am quite happy with both participating)

Of course! But not against set-up-in-the-field stations. Thus the new
class.

> Others don't like the
> idea, like Larry. So they want clarification. That's why there are
> rules. Some people want extra points to encourage Morse code use.

Phone QSO's are one point, digital/CW two points. Works for me.

> If we
> encourage that one mode, then others want their favorite mode encouraged
> too. On and on.
>
Not a bad thing. The more the merrier. Are we too dumb to understand
three pages of rules? I don't think so.
>
> glad there is something else here to discuss besides Morse and the old
> master fisherman

Heck yes. This morning I was out on the run while the rosy-fingered
dawn was coming up behind the Roxborough antenna farm as I rounder the
turn by the elementary school. Black ice, stiff wind and 28 degrees,
so I'm planning FD and how to get a few more points than last year.
Just inherited a clean but old lapper, might be just the thing for
logging. All there except it needs a battery. Also gotta get practice
with the slingshot/spinning reel antenna launcher setup. FD 2003 will
be #36 for me.

How will removing amateur radio privileges remove the blind spots?
Giving police and fire companies more frequencies won't improve the
coverage.

No, it's true. Also Joe Walsh, Patty Loveless, Walter Cronkite, and
many others.

> Why does this celebrity not proclaim he is a Ham in public?

How would you have him do that? Pull out an HT at a concert?

Sorry to bust your bubble, Vipul, but not all hams fit your narrow,
stereotypical view of us.

> .. --. .... - . .-. ...

Four years ago, a nearby office got a new computer system. A little
dumpster-diving produced the following:

Seven - 14 inch color VGA monitors, all in working order, with cables
Six - 386 computers in AT-style cases with 200 watt power supplies,
3-1/2" floppy drives, 2 meg of memory, video and network cards,
complete with cables, all in working order.
One - 386 computer in AT-style cases with 235 watt power supply,
3-1/2" floppy drive, 8 meg of memory, video and network cards, 256
meg hard drive, complete with cables, all in working order.

One IBM 4019 laser printer with half-full toner cartridge and all
documentation and cables (!) in working order.

Of course the motherboards, HD and old 30 pin SIMM memory were not of
much use, but the rest of the stuff has been put to all sorts of uses.
Only one of the monitors has failed. The power supplies have turned
out to be not only reliable but very RF-quiet.

Old Yankee proverb: "Use it up, wear it out, make it do, or do
without".

All,

Question on the US Vanity Callsign program.

The current Status of my application is 2 - meaning "Pending Level 2".
Anyone know what this means?

I submitted the application on Jan 29, and I see payment was confirmed on
Jan 30 (used CC online). The applications has spent most of its life in
"Pending Level 2" status. Just curious if anyone has insight as to what
Pending Level 2 is.

Thanks & 73,

Jim

Crude answer: It means shut up and wait.

Nice answer: It means that your application has been received but they haven't run a vanity call processing session since it was received. They don't run these daily.

Five pages of rules that take up only three pages?

Is this like stuffing ten pounds of you-know-what into a five pound sack?
Or stuffing five sacks into ten pounds? Or ten fives into a sack? Or
sacking out for ten?

My little brain can no longer compute. Thanks, ARRL.

Now Phil we can't be showing people a bad example here.
That isn't a gab-fest it's a (said with a radio announcers voice)
"round table discussion"! For me it's just chewin' the fat
with the guys, we also jump off the repeater and send some
SSTV for kicks. We have even tried PSK 31 on FM, works
real good to! ;^) We also ID with voice keyers, computer
programs, and "CW" sometimes, just to be different.

And what's wrong with that. In Indiana the custom
plates go for $35 more than the regular ones, OTOH
the Amateur Radio plates are just $7.50 more.
(It was $5 more but our Governor spent all our
money and now he's raising taxes to cover his
drunken sailor spending) :(

Then how do we get the word out? Let's face it, the average nonham thinks the
police and other govt. agencies have communications equipment for every
possible contingency. "Everybody has a cell phone" is another frequently heard
comment. The idea that amateur volunteers play a key role is a tough sell to
the media and the public, even though it's true.

How should it be done, Bill?

How about a special on PBS? This could definately fit in to their current programs. They have done "documentary" specials on "sandwiches" and other topics. After watching the "flea market" program, a special on Ham radio showing Hamfests would fit right in.

Not by us.

I'm so tired of people/groups/organizations banging their own drum. If their work is really good and desirable, others will realize it and beat the drum for them.

You younger folks who grew up in the age of Muhammad Ali may not realize it, but modesty in your accomplishments used to be considered a virtue worthy of respect. Nobody *ever* bragged on themself. If you were good, others would do it for you and it meant something. Nowdays it's so pervasive us old guys just tune it out. Wish the younger ones would too.

>Which further leads me to believe that all those Hams in MA, CT, etc
>that don't want to play homebrewing with you probably figured out you are
>just
>trying to ride thier coattails

There are no coattails to ride, whatever that is. More likely, its a lack of interest in homebrewing. One can see that at a Hamfest, which represents what Hams are interested in, what topics are presented.

Remember when "Ham Radio" became QST? It is representative of the change in today's Ham radio.

>>> The ANSWER to that, Vipul, is that the "radio art" is MORE than
>>>experimentation INSIDE the box...It's how to USE the box too.

>>>FCC
>>>or other credible source?

>I have been an ACTIVE Amateur Radio
>licensee, probably before you were born, and I ahve NEVER heard of ANY
>"definintion" of "radio art" to be ONLY "technical achievement".

From the ARRL's "FCC rule book":

Advancement of the radio art, [97.1(b)]
"For more than 85 years, hams have carried on a tradition of learning by doing, and since the beginning have remained at the forefront of technology. Through experimentation and building, hams have pioneered advances such as single-sideband transmission, and are currently engaged in state-of-the-art designs in digital radio and spread-spectrum techniques. Amateurs were among the first to bounce signals off the moon to extend signal range. Amateurs

design and build satellites, experimental balloons and rockets at a fraction of the cost of their commercial counterparts. Ham's practical experience has lead to technical refinements and cost reductions beneficial to the commercial radio industry."

The club uses the phrase "advancement of the radio art" and does not do anything near what is mentioned in the above paragraph. Not only do they not do these activities, they are uninterested in those activities. Yet, they can use that phrase to make them look good - that's rationalization.

Then I'd say that it's time to find-- or perhaps even establish-- a local club that does those things. Seems like you are looking for something more specialized in that regard, and if there is no such club in your area, maybe you would be the best person to start one, by virtue of your background in homebrew and electronics. Get the word out and I'll bet you'll find some instant members, particularly if you live in a larger city or metro area.

Doesn't burst my bubble, Brian. My pileup QSO with you did not involve
a conversation and you didn't make an impression of any kind. You
didn't provide your views on anything and I didn't give you my views on
anything. All of my opinions of you have been formed here over a number
of years.

> Are either of those a bad thing?

Heck no! I like the idea. It not only might entice some more participation, but a big bonus is that the EOC station will be looked at, checked out, and made working. There was a station not so far away, not an EOC, but pressed into operation which had several of it's antennas down one day that it needed them up and working. Thank heavens some hams got a quick dipole up and running for it. But getting the EOc station up for field day means it will be checked out at least once a year. That means it will probably be up and running when it might be needed badly.

>> But that is small beans compared to FD.

> be #36 for me.

Wow, This will only be my third. I've been thinking about the GOTA station, which I control op. I'll probably make a poster up explaining the parts of a QSO. I've seen that newbies are more willing to work if they can understand the structure of a contest QSO. I'm also going to check to see if there is any restriction on running PSK31 on a GOTA station. Lots of the kids will feel right at home with that. Top it off with the club getting a new radio for GOTA, and I'm juiced. Top that off with running the 80 meter station on the overnight shift, and that's just about as much fun as I've ever had.

Then I go home and sleep about 14 hours after teardown. 8^)

We lost three hams. I'm sorry you find that irrelevant. I do not. In my
area, we feel the loss when one of our own dies. I can't even imagine
you said that

> "Even astronaut hopeful Lance Bass of 'N Sync is a ham - KG4UYY."
>
> I doubt it. Why does this celebrity not proclaim he is a Ham in public?

He has a license. look it up.

Now I gotta say it..... SHEESH. Your insensitivity on this issue makes me want to PUKE. You take a national tragedy like this and try to twist it to further your dislike of Ham radio operators and the ARS. Do you have no shame?

I would suggest you take a minute or day to think about what you have said here. You owe the entire group an apology. If you don't like hams so be it. But I doubt that the fattest smelliest social misfit ham you see at a hamfest (that you so detest) has the decency to care about these people.

Shame on you.

"Self-congratulatory"...?!?!

Interesting term, since the advertising business, which is essentially the profession of self-congratulating, is a multi-billion dollar industry.

So we're supposed to just sit around and HOPE that someone promotes our activities and programs? Maybe the professional broadcasters, with whom we compete for spectrum allocations, will do this for us...?!?!?

Uh huh...sure. I belong to an aviation organization that is really poor about getting their own word out, yet are one of the most proactive rescue and aviation advocates in the United States..

As a real recent and "in your face" "fer instance", which agancy was the only civil agency allowed to fly in the immdeiate post attack phase of 9/11?

What agency flies 85% of all USAF assigned air search and rescue missions in the United States (and has maintained that threshold for over 40 years of it's 60 years of existence?)

What agency has the largest civil fleet of aircraft in the United States?

What civil aviation organizaton has the highest saftey record in the United States?

Now, unless you happen to be a member of Civil Air Patrol or are just a trivia-geek, (or took the BIG hint from my lead-in above!), you probably DIDN'T know it was Civil Air Patrol.

I agree with your suggestions that once-upon-atime it was not necessary for one to self-promote, however that was in a much simpler day and before the onslaught of media exposure, Bill.

If you want your "story" out there, you're gonna have to do it. Some do it better than others, but oh well.....

>You can assume that, but it would be incorrect.

Prove it.

>Remember when "Ham Radio" became QST? It is representative of the change in
>today's Ham radio.

HUH...?!?!?

Are you using dope, Vipul?

>The club uses the phrase "advancement of the radio art" and does not do
>anything near what is mentioned in the above paragraph. Not only do they not
>do
>these activities, they are uninterested in those activities. Yet, they can
>use
>that phrase to make them look good - that's rationalization.

And if the club recruits ONE person into Amateur Radio with thier program
that subsequently becomes involved in the promotion of "the radio art" (whcih
does not EXCLUSIVELY involve "technical achievement"), then they will have
succeeded.

That's NOT "rationalization".

Try again, Shadowman.

Vipul's alrady been suggested that, but he's only looking for a ready-made organization into which he can make a grand entrance, Jackie...When suggested HE start such a club, he made some vague reference to having "tried that once", and only had one or two people showed up.

Now it's his "other obligations" that prevent him from doing it, but obviously not from WHINING about the lack of one in THIS forum.

That's what happens when people let thier kids play with the computer at night.

That's great! I am always accepting donations of older PC's 133Mhz and up, as I get them working, (or consolidate 2-3 into one good one) and donate them to the Family Community Center close to where I live, and they give them out to the needy. They are more than adequate for basic internet exploring and email, as well as using similar programs such as used in Microsoft Office etc. So far I have donated over 20 PC's in the past 3 years or so, through people donating them to me!

Any of the 100Mhz or less make good packet or logging stations or similar for me.

>
> It always pays to look inside the dumpster when you're
> making a drop-off ;^)

Hell... nothing wrong with that! I have "no shame" picking something up something from the curb, or dumpster! I have picked up a 55 gallon fish tank where the glass was cracked and I repaired the crack by sealing it and it still is in otherwise great shape. Crack was towards the bottom on a side pane of glass and barely noticeable if covered up right. I am still using the VCR I found once. All it required was a new belt and is still working like a charm! It is amazing what people throw out.

If amateur radio hadn't been legislated out of existence, yes. Which probably would have happened years ago without ARRL or an equivalent group banging the drum on both a national and international level.

> I think so.

Reading the blurb, note that ARRL does not say it's an ARRL thing, but a ham radio thing. All Newington is doing is getting the word out.

Would MSNBC have carried the story about what the hams in Texas are actually doing if there was no ARRL?? I don't think so.

I wish it were so. But the fact is that the squeaky wheel gets the grease in our society. Most nonhams I meet have no idea that amateur radio even exists, despite the fact that there are 685,000 of us in the USA alone. Those who do know often confuse amateurs with cbers and freebanders.

Do you think the MSNBC piece would have happened without somebody pushing it? Who is going to push it, if not some organized amateur radio group like ARRL?
>
>You younger folks who grew up in the age of Muhammad Ali may not realize

I hear what you are saying, but there's a big difference between bragging and telling the story so the credit goes where it is due.

> Nobody *ever* bragged on themself.

"It ain't braggin' if ya really done it" - Babe Ruth

Heck, just look at the history of radio. Marconi, Sarnoff, DeForest and others were tireless self-promoters, often to the point of distorting the facts. Many books will tell you that all-electronic TV made its debut at the 1939 NYC World's Fair, and that it was "invented" by RCA - even though Philo T. Farnsworth was the actual inventor, and gave a public demonstration five years earlier (1934) in Philadelphia, at the Franklin Institute.

>If you were good,
>others would do it for you and it meant something.

Wish it was like that today, but it's not.

>Nowdays it's so
>pervasive us old guys just tune it out. Wish the younger ones would too.

I'm 48. Been a ham 35 years. Publicity has always been a problem - as in not enough.

What the hell does collecting Shuttle parts have to do with Field Day
rules? Izzit Field Day in Texas??

> Gotta remember that the 28 page packet is meant to be self-contained.

So are the Bible and the tax codes, the similarities between those and
the FD "rules" package is striking.

> Log sheets, summary sheets, W1AW schedules and freqs, typical
> message-to-the-SCM formats,

When was the last time an NTS formatted "message" to an SCM proved of
any value whatsoever during an emergency in which ham radio was
involved? Ditto the pointless "Message from w1aw" thingey. Because
that's the way Hiram Percy imagined how ham emergency traffic should
be done? Pffft. Dump it, It's bullshit which has notting to do with
notting. There goes at least one page.

Hiram Percy did die ya know . .

> handouts for the general public,
> explanations of basic stuff for the clueless, etc.

Bible, tax codes . .

> Whole point of FD is "something for everybody"

That's exactly what's WRONG with FD for many participants like myself
and you too, see following.

> which means lotsa

> of radio stuff. A beginner might get a shot at a rig around 3AM on a
> dead band. Satellites? GOTA station? Publicity, natural power, new
> modes? Ferget it, no points, not worth the effort.

Who are you kidding?? How are you gonna run in FD this year? Are you
gonna work a satellite? Are you gonna set up a GOAT station? Of course
not. You're gonna toss up some antennas and churn score. Just like it
"used to be." And I'm gonna do the same drill for exactly the same
reasons.

>
> Having all the catgeories and such is meant to widen the scope of FD.
> Not a bad thing.

Much of it is, as a minimum, a goofy thing at best. Generates gross
confusion, lotta pointless pushups, wasted manpower, general BS, yadda
yadda . . which is why we both opted away from the annual k3mn "radio

picnic". Preaching in one direction and going in the other direction
is bad form.

>
> There's also the perennial problem of folks not understanding the
> rules, no matter how clearly they are written.

Bible, tax codes again.

> > A lot of people
> > wouldn't care for that. IMO, a home station operating off the mains is

> > (FWIW, I am quite happy with both participating)
>
> Of course! But not against set-up-in-the-field stations. Thus the new
> class.

I can see the k3mn squad moving the operation from Clayton Park to the
courthouse front lawn so that they can compete in the F class. This
one is almst as good an idea as the Diamond Club.

There is a solution. We need two field events per year. One would be
FD the way it exists. I could care less, don't bore me with it, let
'em go work GOATs, do some radio and pass out PR sheets or whatever
other ARRL flag-waving exercises they get off on. Except call it the
annual ARRL National Radio Picnic and drop the "emergency comms"
nonsense because in truth FD as it exists today has about as much
relevance to emergency comms as the ARRL cw dx contest has.

The new one would be taking Sweepstakes into the bushes. Same rules as
SS except that it would have to be done in the field per FD and both
phone and CW would be used on an equal points basis on the same
weekend. One page.

Lemmee guess which event you'd jump all over . .

In my opinion and without scientific data: for the majority part, amateur radio is a hobby for most amateur radio operators. However, we all, nearly all of us anyway, realize that the privilege of being able to use the frequencies comes with the responsibility to "pay back" our community(ies) with some form of public *service*. I think that is the most succinct way of putting it. I regard ham radio as nothing but a hobby. However, I have--from time to time--gladly "put in" my time back to my community(ies) for the privilege of being a ham radio operator. Hobby is 98%, Service is 2%. Rough estimates, of course.

When I considered amateur radio licensing, I didn't say to myself "Wow, I think I will find an activity that I can do for free in *service* to my community! One where I can spend all kinds of money and hours on my own, without reimbursement." What I did say to myself was, "Wow, ham radio! Sounds like lots of fun! I think I'll go for it!" And, if most are truthful--we just are not prone to doing something without reward: the reward for the *tiny* bit most of us spend in service, is the fun we have with what we consider little more than a hobby. I actually daresay that most who would zealously use "service" as a defense for amateur radio are the Larry Roll definitions of nothing but wannabes.

The hams combing Texas for shuttle parts--I also daresay--would probably agree with my opinion. Maybe not.

Yes you are and yes they will. Do a good job, be useful, smile, and the
word will get around. One word from another person is worth a hundred of
your own.

Ya picked the wrong example.

There were only two points in history when the existence of ham radio
was threatened. The first came in 1910 when a Senator Drew wrote a
bill prohibiting amateur experimentation. The Junior Wireless Club
squashed that and Hiram Percy was nowhere on the horizon.

The second was in 1919 when the Alexander bill would have eliminated
ham radio. The ARRL got into it but the league was only one of a
number of players who helped kill that proposal. Those included Hugo
Gernsback who has been credited by many with actually turning the tide
vs. the puffery about Hiram and the ARRL's role in certain League
publications. Drum:Beating:Twist history. Marconi and Fleming also
went to bat for ham radio. How much clout do ya 'spose those two icons
had in Congress vs. Hiram Percy??

How much column space did QST give Gernsback, Fleming and Marconi (vs.
Hiram Percy) for their efforts?

There was never an international movement to eliminate ham radio.

Emergency op's knowing how to pass traffic. FD is glitzy training for
that sort of thing. It's really a clever way of getting a lot of people
to train for this sort of thing at their own expense.

>>Gotta remember that the 28 page packet is meant to be self-contained.

Do you know exactly the form of comms for any emergency? If the wheels fall off ya gotta work with what you have. Kinda like I think hams should have basic proficiency in CW so they can use that if need be, and exposure to as many forms of comms as possible.

>>handouts for the general public,

> and you too, see following.

But Brian, it's for you too! If you want to stay home and QSO, you're free to do that. If the scoring is too difficult, you don't have to turn in a dupe sheet. A person can participate in FD just firing up their station at home and at least give out the exchange. Sounds like a no-muss, no fuss Field day if that's what you want. No one is forcing you to run a station for the newbies, no one is forcing you to copy a W1AW bulletin. etc.

We might work a satellite, We will definitely have a GOTA station,
We'll have a person copying W1AW, we'll have an elected official there,
we'll have the local newspaper there. We'll have the local Television
stations there. We want to, and will. If you don't want to, don't.

> is bad form.
>
>>There's also the perennial problem of folks not understanding the
>>rules, no matter how clearly they are written.
>
> Bible, tax codes again.

I've been involved in rule writing for over 10 years now. Some
observations:

1. You cannot write a rule that someone cannot misunderstand.

2. Those who misunderstand the rules invariably blame the rule
writers.

3. Those who have problems with the rules cannot do any better. I
always ask the complainant to come up with something better. they have
either gone away mumbling something about "I'm not going to do your job
for you", or come up with something that won't work at all. See rule 1
of the observations.

I think it is symptomatic of some of the problems in society today that
people who cannot understand the rules seem to blame those who do for
their lack of understanding.

The challenge to write better rules still stands. Make us some rules to
run field day by. Jim's joke about the small font notwithstanding, I'd
love to see the ideas.

I'd like to think they would, too. Hams as individuals are great guys.
It's when they band together and call themselves "ARRL" that things start
to go a little goofy.

Like nearly all bureaucracies, the League's first mission is self-
preservation. I can't really fault them for that since it *is* the way
of the world, but it sometimes gets in the way of their professed mission
and really does get tiresome.

A perfect example of why beating your own drum sucks. Had other people with no ax to grind been doing the bragging, the truth would have no doubt prevailed.

Remember last summer's Enron commercials? The most successful and wonderful company on earth.

I'm a realist, guys. I don't expect to return to the '50s anytime soon. But there *were* some advantages.

> > privileges (to get rid of those serious "blind spots"). Not good for amateur
> > radio.

The main reason there are blind spots is because the various agencies
simply haven't built the necessary infrastructure to cover the entire
area reliably. Probably boils down to $$. Taking away the ham bands
won't make other services' coverage any better.

Because hams are unpaid, and often willing to use recycled and simpler
technology, the cost of a ham repeater can be much lower than the

equivalent "professional" installation. And because hams put emphasis
on operating skill as well as technology, they can make do with
less-than-optimal setups.

But he did.

Consider for a moment - who does Mr. Shah sound like in this
discussion? He's minimizing the public service contributions of hams,
calling the publicity "hype", and dismissing as "irrelevant" the fact
that quite a few astronauts are also hams, and the loss most of us
feel.

Mike, thank you for expressing what many of us felt when we read
Vipul's nonsense, but could not adequately get across.

I'll repeat what I wrote about Mr. Shah and another constant critic a
little while, back:

"Their hobby is wasting time. Your time."

When you read their posts, you are being baited. Perhaps by the master, perhaps by the apprentice. Perhaps they are one and the same. The writing style is a little different but the message is almost identical. They ignore facts and exposing of their faulty logic.

You are a professional first responder (firefighter, police officer,
EMT, etc.). What are your first thoughts as the first car load
of ham radio operators arrives on the scene of a disaster or search?
Well, I can tell you, because I have heard it many times. "Tell those
#4%$ CB ham assholes we don't need them. The last time
they were here they ate all the free food and got in the way." And
more than once, some obese ham op himself diverts emergency
resources when he has a heart attack walking in the woods for the
first time in years. Sorry to bring you the painful truth, but the glory
days of ham radio are long over. Ham radio's hey day was in the
1950s and early 60s, just before the shitheads in Newington started
their selfish incentive licensing program to sell more publications.

Geez Brian, who peed in your Corn Flakes? I don't go as far back as you,
but do remember having to wait at least 6-8 weeks or so for my original
license.

All I was inquiring about was what did "Pending Level 2" mean. No more, no
less. Last evening, John gave the answer, basically just a normal part of
processing until the FCC either grants or dismisses. Until John HELPED with
his answer, I was thinking Pending Level 2 meant it was going off into the
bit-bucket somewhere.

Sheesh,

Jim

To the point that Part 97 clearly states that it can't be anything BUT
a hobby.

> However, I
> have--from time to time--gladly "put in" my time back to my community(ies)
> for the privilege of being a ham radio operator. Hobby is 98%, Service is
> 2%. Rough estimates, of course.

That's generous, I doubt the ratio is that high. I certainly put in my
volunteer hundreds of hours in radio-related local community public
service efforts. There are gazillions of ways to apply the ham radio
experience to public service work and many of those have nothing to do
with "emergency comms".

> When I considered amateur radio licensing, I didn't say to myself "Wow, I

His comments along the lines of "pimply-faced geeks running around an
emergency site screaming into an HT" are right on the money. However,

there are a large number of hams out there who are quite serious about being well prepared to supply emergency comms and they're very good at that game, practiced, disciplined, etc. The Red Cross, the Salvation Army and the National Weather Service know who they are. The ARRL has recently ratcheted the game up via offering courses and certifications in the field. These are good and I doubt Larry has a problem with them. At least I hope not.

Bill,

Dick Irving K3FK and I chewed on this one for months and came to a
similar conclusion. At some point in the fairly recent past, the League
lost sight of its primary mission--to serve its membership--and became
obsessed with perpetuating and expanding the organization.

The removal of "Section News" and contest line scores, the inauguration
of the elitist "Diamond Club", charging applicants for the Rag Chewers
Club and Old Timers Club certificats and doing away with the plastic
mailing sleeve for QST (some years back) are a few of my peeves.

No I won't and they won't either.

The present day media is living proof that unless it involves sex, drugs, violence or scandal, they don't have any room for it.

The Laci Peterson story is a prime example.

Your expectations of the goodness of the media's heart is pretty poor, Bill, and does not even remotely resemble reality. I dare you to sit down with the paper today and count the "human interest" stories as opposed to the aforementioned "scandal" stories. I know the San Diego area and know there are dozens of worthy causes that should be highlighted in the press. How many are there today?

Self promotion, while perhaps a violation of God's law to avoid vanity, is the only way persons, organizations and programs get what they want or need.

Sorry you don't think so, Bill.

Reality, while in short supply in Southern California, sucks.

>anymore).

The only thing that could make it kosher would be if the SK had
requested another call sign for any reason, relinquishing the call
sign in question which becomes available for issuance.

My 1x2 relinquished when the vanity program opened was grabbed
up by a club station (California Highway Patrol and State
Police Officers ARC). The W6 1x3 (issued to me in 1957 which I
relinquished in 1977 to get the 1x2 has never been reissued,
not even as a 1x3 vanity call, according to QEZ.

So much for the scarcity of 1x3 calls.

>So the vanity callsign must have been issued back in 1996?

The Vanity Call Sign program started (Gate 1) June 18, 1996.
One can tell if the call sign is a vanity call by the notation
HV in the Codes section of the QRZ Detailed listing.

>The mind reels.

Sure does.

From K4YZ:
>>> And >>I<< repeat...Since YOU are a product of the present examining
>system,
>>>we can safely assume that YOU don't know the material

Which means that no a code Technician class can know more than an only-coder
General.

>And if the club recruits ONE person into Amateur Radio with thier program
>that subsequently becomes involved in the promotion of "the radio art" (whcih
>does not EXCLUSIVELY involve "technical achievement"), then they will have
>succeeded.
>
> That's NOT "rationalization".

So, you just said:
If someone joines the club and then this person subsequently promotes "the
radio art", the club can claim "promotion of the radio art" was their goal.

This is a perfect example of rationalization.

Another example of rationalization is: General class license must have higher
technical skill because they have a higher license class.

"the radio art" (whcih
>does not EXCLUSIVELY involve "technical achievement").

Yes, it does. I quoted the paragraph from the "FCC rule book." It describes
technical achievement.

From the ARRL's "FCC rule book":

Advancement of the radio art, [97.1(b)]
"For more than 85 years, hams have carried on a tradition of learning by doing,
and since the beginning have remained at the forefront of technology. Through
experimentation and building, hams have pioneered advances such as
single-sideband transmission, and are currently engaged in state-of-the-art
designs in digital radio and spread-spectrum techniques. Amateurs were among
the first to bounce signals off the moon to extend signal range. Amateurs
design and build satellites, experimental balloons and rockets at a fraction of
the cost of their commercial counterparts. Ham's practical experience has lead
to technical refinements and cost reductions beneficial to the commercial radio
industry."

Yeah! And when those winds whip down the western prairies (nothin' between here and the North Pole but a coupla barbed wire fences, so they say out there) it doesn't take much snow to occlude the roads and drive the windchills down to 30 below.

Ah, now comes the veritable heat wave-- supposed to be in the 20's and 30's through next week.

I know that, you know that, but he did take money, and that's why he went to jail. Otherwise, he would have just lost his job, which he did anyhow.

And you know what? Who really gives a shit anyway?

Me. He sold the call sign that I wanted (and was legally entitled to under the pick-your-call program). My application and the attached fee check mysteriously disappeared and the call was issued to the purchaser (a high ranking military person, now deceased) before I could get any info as to why my check was never cashed.

I don't forget those things.

>There are far more important things in the world to worry about!

You are so right, Mister Officer.....

In both California (where I used to live) and Oregon (where I
live now) the ham plate fee is a one-time fee in the $5.00 range
versus $25 or more per year for "environmental" plates. In Oregon
we have my ham call on a special-series "environmental" plate because
the regular-series plates that ham calls go on are too ugly.

You're living an idealistic dream. FD events are either radio picnics
or contests depending on the inclinations of the particular
individuals who set up the stations. I have yet to run into anybody
involved in any FD I've been in "remind" anybody that the whole idea
of FD is to "practice emergency comms". Let alone even start to
advocate any such thing. Not once. Ever.

>
> Do you know exactly the form of comms for any emergency? If the wheels
> fall off ya gotta work with what you have.

Which is exactly what I'll do if an appropriate situation pops up
again and I have a radio handy. In fact I've done just that in several
instances over the years via highway incidents. I got the comms thru
despite them not being "exactly in the approved form". Jeez, I guess
I better clean up my act, next time I need a cop I'll stop everything
and count the words before I transmit and send/confirm the check
number huh? As if.

Since ya chose to respond kindly note that ya completely ignored my
question to Jim. I'll try again: "When was the last time an NTS
formatted "message" to an SCM proved of any value whatsoever during an
emergency in which ham radio was involved? Ditto the pointless
"Message from w1aw" thingey."

> Kinda like I think hams
> should have basic proficiency in CW so they can use that if need be, and
> exposure to as many forms of comms as possible.

I wouldn't place any bets on how many licensed hams are first exposed
to any mode on FD.

>
> I guess you started as a fully experienced ham, eh?

My first FD was 15 years before Jim's first and that was before I was first licenesed. I have yet to learn a bloomin' thing from any of the several I've worked in including my first. The reality is that ya take knowledge INTO FD, not OUT of FD. YMMV.

> Maybe someone will
> see the handout and become interested. Maybe

No problem with that, good idea for radio picnic type operations.

No, God willing and the creek don't rise I plan to toss up a collection of homebrewed antennas by myself out in the boonies and run score, enjoy the fresh air and have some fun. Without getting booted out of my seat in the middle of a nice run on 20 CW by a couple nitwits who worked a grand total of four stations in the following four hours on 10 ssb. Good thing there were two of 'em . . that crap is NOT gonna happen to me again. In fact I just popped $1,200 for a light compact dc to daylight xcvr specifically for the event.

> No one is forcing

Yer preaching to the choir, I founded a couple radio-based organizations 25 or so years ago, they're both still in operation and there's still grousing about the by-laws I wrote back then. In addition to chairing a municipal gummint committee which wrote ordinances.

Read before ya leap on yer keyboard Mike, I already posted my suggestion for "better rules" for those like Jim and I who can't be bothered with the FD bloat. Ref: SS in the boonies. One page.

The USA has a population of approximately 300 million.

Citizens of the USA know about cellular telephones
(little two-way radios connected to the telephone system)
and one out of three are cellphone subscribers according
to the Census Bureau.

Citizens of the USA know that CB exists and that public
safety people use radios. Such has been shown on both
TV news and fictional drama for over two decades.

Citizens of the USA know that radio and television broad-
casting exists since they listen and watch it for news.

Citizens of the USA don't know much about "ham radio."
If they do, they probably don't know any detail such as it
being this "vital service to the nation" etc., etc., etc.

It is doubtful that many citizens of the USA know
"freebanding." ;-)

Or has there been a "poll" that Mr. N2EY (his real surname?)
uses for a "reference?"

>Do you think the MSNBC piece would have happened without somebody pushing it?

Do you really want to know? Journalism 101 should be
available in some nearby night classes there in downtown
Pennsylvania...inquire locally.

>I hear what you are saying, but there's a big difference between bragging and
>telling the story so the credit goes where it is due.

There's an even BIGGER difference between reporting and
careful word-crafting to exclude certain details. ARRL is
very good at such craftsmanship.

>> Nobody *ever* bragged on themself.
>
>"It ain't braggin' if ya really done it" - Babe Ruth

This isn't a baseball or candy newsgroup. And Mr. N2EY
isn't a major league slugger.

>Heck, just look at the history of radio. Marconi, Sarnoff, DeForest and others
>were tireless self-promoters, often to the point of distorting the facts.

Of course. Everyone knows that amateurs and St. Hiram
invented radio, pioneered short waves, perfected everything
as told in the temple at Newington. No problem.

Erich von Daniken wrote no less than five books explaining
visits to earth by ancient astronauts. :-)

>Many
>books will tell you that all-electronic TV made its debut at the 1939 NYC
>World's Fair, and that it was "invented" by RCA - even though Philo T.
>Farnsworth was the actual inventor, and gave a public demonstration five
>years earlier (1934) in Philadelphia, at the Franklin Institute.

Vladimir K. Zworykin of Westinghouse had demonstrated in
1929 a television receiver containing his kinescope picture
tube. RCA Corporation hired him in 1930 and he became a
research director. In 1931 he and his associates invented the
iconoscope camera tube, one more sensitive than he had
invented in 1923. Other approaches lacked the storage

feature of the iconoscope and Philo Farnsworth's image
dissector were less successful.

- ELECTRONICS 50th Anniversary Issue, April 17, 1980

Scotsman John Logie Baird demonstrated much television
in the 1920s and 1930s but those were all using the Nipkow
mechanical scanning disk.

The image orthicon from RCA Corporation became the
studio camera tube of choice by 1950, the iconoscope
relegated to film and transparency pickup. The vidicon
soon followed for small cameras. There was no
"philocon" ever made or used.

>>If you were good,
>>others would do it for you and it meant something.
>
>Wish it was like that today, but it's not.

Nobody recognizes Mr. N2EY's glorious achievements?
How many patents does Miccolis have?

>>Nowdays it's so
>>pervasive us old guys just tune it out. Wish the younger ones would too.
>
>I'm 48. Been a ham 35 years. Publicity has always been a problem - as in not
>enough.

Just think, 35 years! All that time and not being able to
"push" his lifestyle into the media! Tsk, tsk, tsk.

Maybe it's due to all his errors and mistakes? No one can
possibly think he has anything worthwhile to offer after so
many errors and mistakes...tsk, tsk, tsk...

>No smart retorts accepted

Throughout all of Title 47 CFR the word "service" is a regulatory
term denoting a type and kind of radio activity defined in the
individual Parts of Title 47.

That is what is. Nothing smart about it.

If you, Mr. AC6V, want to emotionally load the word "service"
with some kind of nobility or civic duty, feel free. Just don't
try a con game about word definitions to soothe your personal
fantasies or demand that others obey those fantasies.

If you feel "hurt" or outraged, don't ever look in other parts
of Title 47 CFR. In Part 95 you will see things like the
Citizens Band Radio SERVICE, even Family Radio
SERVICE and Radio Control SERVICE.

Jackie, you've not been in here for a long time. The Regulars
in here (nearly all PCTAs) are simply elitists who want all to
follow Their directives, Their kind of enjoyment, Their life-
style and NO back-talk from "inferiors." :-)

Throughout all of Title 47 CFR, the word "service" is a regulatory
term denoting a type and kind of radio activity.

The elitist Regulars in here want, love, and cherish the emotional
loading of the word "service" with "service to the nation, the
community," whatever. It puts a lovely radiance on their hobby
activities for basking in a glow of glory and nobility without once
having to actually DO any services to the nation or community
through amateur radio. They point to ARRL Letters as
"explaining it all" as if those were immortal words from the
divine blessing them more than others. PR fluff. False bunting
decorating a stage of twigs, designed to take hobbyists into
membership for the organization's survival. Lifestyle-ism as a
substitute for real life. Emotional sustenance because the real
world is too painful for the elite. <shrug>

>later ones but I'm afraid I'll not be doing that any more.

Awww. Sigh...I'll have to read comix more in order to
understand how to communicate on your level?

>You don't answer the points made, you just sling crap,
>and try to put down the other person by attacking them.

Oh? Others "don't do that?" :-) :-) :-)

I don't answer pre-loaded questions that others demand
answers on their terms of fantasy, mythos, or lore.

>I have had a nice qso with Larry K3LT and found him
>to be a very nice person even though he doesn't sound
>like that here sometimes.

I've had a very nice talk with my dentist before and
after he pulled a bad wisdom tooth. That's on par
with the above although on a different green. :-)

Larry Roll (amateur radio callsign K3LT, not his surname)
is simply an "attention-wanter" who uses the computer-
modem medium to fulfill his dreams of becoming some
kind of "spokesperson" or "sage" or "guru." He does not
demonstrate any sort of technical knowledge whatsoever
on any part of radio other than reading official amateur
publications and then using a remarkable imagination to
post a large amount of fantasy.

>You on the other hand will
>NEVER have a nice qso with anyone here on the radio
>because you'll never "lower" yourself to become a
>licensed ham operator.

Tsk, tsk, tsk. I've already had "nice cuesoes" on radio,
amateur radio, with real, live human beings, most of
whom I'd known a long while in-person. None of them
had any sort of chip on their shoulders about enjoying
their HOBBY of ham radio.

A few of them did have a trace of the human territorial
imperative about "their turf." That is understandable in
all humans. It just wasn't carried as far as the Regulars
in here go by demonstrated hatred against anyone who
has seen the rest of the world of radio and radios,
working for money (at disclosed locations). Fortunately,
none of them went to the chest-thumping Muhammed Ali
route of self-described superiority because they had
some kind of extra-special "achievement" that no one
else could do. Regulars in here (all of them PCTAs)
do that with regularity.

>And even if you do become
>a ham you never be nice, so PLEASE don't become
>a ham and lower "OUR" standards by your presence.

I wouldn't dream of disturbing your elite little group of
"special people." I might reconsider becoming an
amateur radio licensee in the future because amateur
radio is an enjoyable hobby involving communications
and technology and social interaction among radio
hobbyists.

The PCTA Regulars in here seem to be entirely elitist,
adopting "ham radio" as a virtual lifestyle, obediently
following all directives of ARRL, slavishly devoted to
tradition, and militant in demanding others' obedience
to Their Commands. All must do as they do and did
because they are the elite, the nobles. Of a hobby.

<shrug>

Heh heh heh...I'm still pondering the "floating" Ten-Tec that
washed up on his famous desert island...or the mysterious
foreign girlfriend "Natasha"...or all those claims of getting any
personnel job he wanted after college that awarded the
soma come loud.

It's almost as good as that other ham in here, the one that
must work for Dick Cheney at some "undisclosed location."

Or the loose cannon, ace of the CAP, who always manages
some kind of picture in UNIFORM...many different kinds over
the years...hair receding and greying prematurely while
shouting at dissenters "get down and gimme ten..." :-)

Or that splendid model of decorum and diplomacy for The Ham,
defunct from a quasi-amateur-ambassadorship for State. :-(

Or the katapult kop munching that hoagie while taking pix of
secret soviet aircraft for Navy intelligence. :-)

So much for "movements" among the Regulars... :-)

>So, no example.

Steve Cannon will probably trot out one of his old set-pieces
about "extras are So good because they expertly know how
to tune their receivers..." :-) :-) :-)

>>I have been an ACTIVE Amateur Radio
>>licensee, probably before you were born, and I ahve NEVER heard of ANY
>>"definintion" of "radio art" to be ONLY "technical achievement".

Oh, my, another "OF" blowing his trumpet!

Tsk, tsk, tsk, I was actively doing trans-Pacific HF radio comm
before that loose Cannon was even conceived. :-) :-) :-)

Let's take the ARRL quoted paragraph and show what it says
and doesn't say, sentence by sentence -

>From the ARRL's "FCC rule book":
>
>Advancement of the radio art, [97.1(b)]

>"For more than 85 years, hams have carried on a tradition of learning by
doing,
>and since the beginning have remained at the forefront of technology.

Firstly, that's just ambiguous non-speak, having no real
reference anywhere.

"Learning by doing" is itself a hit-and-miss experimentation
that some probably do, but most have a certain knowledge
base to apply what they are doing.

"Since the beginning have remained at the forefront of
technology" will only apply at the beginning. The recognized
beginning of radio as a communications medium is in 1896
in both Italy and czarist Russia. "Technology" of 1896 can
only be described as primitive as far as electronics goes...
iron-filing "detectors" and spark transmitters.

From 1896 onwards, the "forefront" has been described in
scientific and technical journals and periodicals. As this new
radio industry formed to fulfill a new need by maritimers and
common carriers, industry periodicals were formed to further
what is at the "forefront." That continues today with a wealth
of periodicals and texts describing many and various
"forefronts." ARRL doesn't come close to explaining those
"forefronts" or which radio service does what in the EM spectrum
amateurs must share with every other radio service.

>Through
>experimentation and building, hams have pioneered advances such as
>single-sideband transmission, and are currently engaged in state-of-the-art
>designs in digital radio and spread-spectrum techniques.

The first part of that sentence is simply incorrect. Single-
sideband transmission originated on wire long-lines as a
means of frequency-division multiplexing several voice
circuits on a single pair of wires. That was before 1920.
In the decade following 1920, commercial carriers utilized
SSB first in radio transmission, essentially using "carrier"
equipment to, again, frequency multiplex up to four voice
channels per transmitter and receiver. The militaries picked
that up for their own long-distance HF radio circuits while
industry did the pioneering of technology for all in RF linear
amplifiers, frequency multiplexing, AFC techniques working
with "pilot" carrier tones, frequency diversity in tone pairing
to reduce selective fading phenomena, and space diversity
in receiving antenna fields to reduce multipath fading effects.

"State of the art" in either digital or spread-spectrum radio
techniques is definitely not done if one includes all radio.
"Digital" radio is a general term that takes in an enormous
variety of modulations. Time-diversity digitizing of up to four
asynchronous TTY circuits was done in the military in the
early 1950s and, at the same time, various commercial
carriers (RCA Globecom, for one) used majority-voting
techniques of three radio circuits carrying the same message
content to select the optimum one for minimum error. At the
same time there were at least four separate methods of pulse
position modulation over multi-channel radio relay equipment,
all of them using a form of digital sampling of analog voice and

ways to reconstitute the analog from digital information.
Claude Shannon's 1947 seminal Bell Labs paper on laws
relating "bit rate," bandwidth, and noise in the circuit still holds
true today.

Spread-spectrum techniques were done first by the
governments for secure communications work, a fallout of
which was an advancement of information compression
technology that are used in modems of 2400 bits per second
and faster. Those modems were then applied to radio in
various forms (one example is PACTOR) for data transmission.

Until R&O 99-412, US radio amateurs were limited by law to
only a few forms of pseudo-random generator patterns for DSSS
when there were hundreds of different patterns employed in
commercial and government applications. There is still nothing
definitive in US amateur radio regulations on FHSS except as a
vague reference.

If ARRL limited itself solely to amateur accomplishments
within amateur radio, they might have a reasonable case.
Such as direct-conversion receivers pioneered in Europe in
the 1970s or PSK31 devised by an English radio amateur.

>Amateurs were among
>the first to bounce signals off the moon to extend signal range.

The first evidence of moonbounce came from US Army Signal
Corps experimentation in Project Diana. That, in 1946, is
considered the first. According to Gregory Bamford's second
book, "Body of Secrets," NSA (National Security Agency) is
the first to regularly use the lunar surface as a reflector for
communications. In the 1960s.

>Amateurs
>design and build satellites, experimental balloons and rockets at a fraction
>of the cost of their commercial counterparts.

In order to meet very stringent requirements of space flight
and space lifters, satellite design and building is done by
those who are experienced in professional space electronics
who might also be amateur radio hobbyists. There are no
amateur publications that detail design guides or environmental
concerns of space satellites except in short, ambiguous terms.

Balloons carrying radio or electronics are not experimental.
Literally millions of radiosondes have been launched since
WW2, each carrying an RF transmitter telemetering data to
tracker-recorders on the earth. [that number is perhaps in
"many tens of millions"] Very high-altitude balloons, both
manned and unmanned have been launched since WW2,
all carrying some form of communications (manned) and
telemetering (manned and unmanned). Very high-altitude

balloons evolved early in economy, limited only by the cost
of helium for lifting; their balloon material essentially very
thin plastic sheet..

Rockets carrying radio and telemetering were already
developed during WW2 in the Wehrmacht Artillery
"Vengence" weapons program. All of those were quite
expensive to develop but the eventual result were V-1s
(technically an aircraft) and V-2s that worked as weapons.
Several nations developed rocket weapons since WW2,
all of them telemetered and most with secure destruct
radios to prevent damage to launch facilities and friendly
forces.

Outside of hobby "park flying" it is not possible to build
cheap, safe rockets.

Governments who once launched a half million radiosondes
a year go to industry for minimum cost and maximum
reliability. Anything else is pipe-dream nonsense.

>Ham's practical experience has lead
>to technical refinements and cost reductions beneficial to the commercial
>radio industry."

A pure PR bit of ambiguity which has absolutely no sense
of perspective in the "commercial radio industry." The
"commercial radio industry" includes hundreds of different
radio types engineered for maximum profit through minimum
fabrication cost sold in vast quantities to the consumer
electronics industry. Such includes all manner of portable
broadcast radios, cellular telephones, handheld transceivers,
private boat electronics (and single-channel SSB transceivers),
GPS receivers, TV sets, "set-top boxes" to receive and
decode digital TV signals, satellite TV and broadcast receiver
systems all using specific integrated circuits which, in some
cases, were designed just for that design. Those don't use
vacuum tubes.

"Cost reductions to industry" is more ambiguous nonsense
since "cost reductions" come from mass production
efficiency. Business is IN business to make money and it
maximizes profit in a competitive field by definite integrated
design by ingenious engineers and technicians who are
professionals at work first, amateurs away from work maybe.

>---
>The club uses the phrase "advancement of the radio art" and does not do
>anything near what is mentioned in the above paragraph. Not only do they not
do
>these activities, they are uninterested in those activities. Yet, they can
use

>that phrase to make them look good - that's rationalization.

Ambiguous vague statements of wonderfulness in radio are great for use by membership organizations to increase their membership. A definite side-effect is the spoon-feeding and brainwashing into Believers who don't know much of anything outside of amateurism but are both Devout to a fault and also quite enraged by the slightest negativism of their Religious Beliefs.

Membership organizations rationalize their statements by saying "we are talking about amateur radio" despite their constant attempts to align themselves with the rest of the radio world...and not telling their membership much about the rest of that world of radio. Lovely set-up. :-)

Wait! What's that I hear...? A crescendo of tiny violins in sweet refrain? C'mon Len, I don't think that many people take this all as seriously as you think they do.

OTOH, I and many other hams choose to make ourselves available through ARES and RACES and Skywarn. What's wrong with that? So were are not a part of the Red Cross or other relief organizations- but there are times when even the capability of organizations who're used to disaster response get overwhelmed with the communication aspects of disaster response, and so they call on a pool of trained individuals who make themselves available to help out. Now, I don't know about others, but I certainly do not feel as if my participation in helping out my fellow humans qualifies me for demi-god status or even for bragging rights.

>They point to ARRL Letters as

> world is too painful for the elite. <shrug>

How do you define the "real world", Len? Scratch that, nevermind... I live there, so I know something about it.

I somehow doubt that most AR ops see the ARRL as some sort of divine oracle to be obeyed and supplicated to. C'mon, it's a hobby, AND a service, AND some people happen to get some pleasure out of any number of aspects that fall under those two categories. What is the problem with that? You're not even an AR operator Len... so I really fail to see how this affects you personally.

I'll accept that, Jim. However, how many people saw that demonstration at the Franklin Institute versus at the World's Fair? How many saw it in magazines and newspapers as a result of the fair? For most Americans, television did make its debut at the 1939 World's Fair. Why argue with most Americans over a point this minor? The Farnsworth versus RCA controversy is worth noting however (inventors deserve credit).

>> you said that
>
>But he did.

I can't imagine you lifestylers are THAT brainwashed to
think that astronauts were amateur radio operators FIRST
before anything else.

The vast majority of hams were simply requested to add one
minor item to a large list of Tasks To Do...aid NASA PR and
get a Technician license.

>Consider for a moment - who does Mr. Shah sound like in this
>discussion? He's minimizing the public service contributions of hams,
>calling the publicity "hype", and dismissing as "irrelevant" the fact
>that quite a few astronauts are also hams, and the loss most of us
>feel.

Yes, you all "feel" great emotion. Not for those human beings
but for their licenses, Mr. N2EY. Their loss reflects on your
surname, a ham callsign. Great crocodile tears shed...in the
newsgroups.

>Mike, thank you for expressing what many of us felt when we read
>Vipul's nonsense, but could not adequately get across.

Yes...you, Mr. N2EY, are the Emotion and Grief Director of
the newsgroup. All shall grieve as you direct.

Never mind that seven human souls were lost in a Real
Pioneering endeavor, seven who had families and friends.
Your concern was only for the three who were granted
amateur radio licenses.

>I'll repeat what I wrote about Mr. Shah and another constant critic a
>little while, back:

>
>"Their hobby is wasting time. Your time."

You are the one wasting time doing a poor parody of
"shame" and "grief," enjoying some perverse pleasure
of attempted emotional manipulation to win some
message points. Tsk, tsk, tsk.

Isn't it time for another Sermon on The Antenna Mount,
Reverend?

>When you read their posts, you are being baited. Perhaps by the
>master, perhaps by the apprentice. Perhaps they are one and the same.
>The writing style is a little different but the message is almost
>identical. They ignore facts and exposing of their faulty logic.

Yes, according to the Reverend's poor replay of ARRL
dogma, all that do not agree with his righteous opinions
are "ignoring facts" and using exposed faulty logic...

All shall think like the Reverend to be Correct and
Faithful in the Service of the Church of St. Hiram.

Amen...over and out...roger that.

Mike, it really was better back then, and this is not just the musings of a senile old fart, either. Before incentive licensing, hams were much more fraternal. It was like a club where the newbies either upgraded within a year or dropped out and all the regulars were pretty much equal: Same license, same frequencies, same mode priviliges, everything.

When incentive licensing came, so did the "I have a better license, I'm a better ham" school of thought. And since there were several new levels, not just one, there was ample room for everybody to look down on someone else. In your local club, do the Extras hang out only with the Extras? Do the Generals shun the Novices? Does everyone look down on the "No-Code Techs"? I'll bet most of the no-coders never come to their second meeting.

There are lots of ways individuals could be recognized for their achievments and encouraged to improve themselves. Licensing turned out to be a very poor choice. You know what they say about the road to hell being paved with? Add incentive licensing to the list.

Absolutely! Now...what about the others?

Do license grants now enoble the certificate holder some
Divine TRVTH engraved in marble? Absolutely NOT.

Everyone has opinions. Problem with the PCTA Regulars
in here is that Their Opinions are the Only Truth. Not only
that, the Words of ARRL are Sacred. All that disagree with
such Divine Words are "mistaken," "error prone," and
worse.

>Wait! What's that I hear...? A crescendo of tiny violins in sweet refrain?
>C'mon Len, I don't think that many people take this all as seriously as you
>think they do.

PCTA Regulars do. :-)

>OTOH, I and many other hams choose to make ourselves available through ARES
>and RACES and Skywarn. What's wrong with that?

Not a thing wrong with that. It's only the Believers in
the Sanctity of CW within those activities that are too
tied up with their traffic handling via CW fantasies.

Actually, Jackie, you have aligned yourself already. You
haven't quite gotten the picture that I am NOT criticizing
the hobby, the recreation of US amateur radio.

I am criticizing the up-tight, do-it-my-way-or-die dumdums
who cannot take one iota of negativism without attempting
the false misdirection that I am "against all hams."

>So were are not a part of the
>Red Cross or other relief organizations- but there are times when even the
>capability of organizations who're used to disaster response get overwhelmed
>with the communication aspects of disaster response, and so they call on a
>pool of trained individuals who make themselves available to help out.

I commend you for your efforts. I volunteer to help without needing a license in anything (except vehicle licenses), just like in the Northridge Earthquake of 17 Jan 94. Despite a total absence of primary electrical power then and the local telephone system beyond its maximum capacity, the only thing "overwhelmed" was the work task for utility companies and construction crews. No ham license would have helped those actually doing the work of restoration of normal function. The utility companies, the public safety people were NOT overwhelmed in their ability to communicate. For that matter, anyone calling IN to the L.A. area could get through fine...the telco was only overloaded for originating local calls.

Licenses in amateur radio are NOT absolutely required to help any emergency/disaster/relief group. TRAINING IS. Neither you nor anyone else gets "trained in emergency communications" by doing ham hobby comm or working up high point scores in "radio sport" contests. It takes, at worst, five minutes to "train" someone to use a utility, police, or fire HT, maybe another five minutes to explain beginning jargon phrases and "listen first before speaking."

Please don't start in with this "pool of trained operators" nonsense. Real emergencies don't need 1912 Save-the-Titanic CW skills. Real emergency/disaster folks don't use CW and haven't done so for decades.

Operating a radio IN land warfare without much training was proven in the field in WW2 and all the minor wars (dozens by many countries) following. Warfare is a true 24/7 emergency environment regardless of our defunct diplomats redefinition.

>Now,
>I don't know about others, but I certainly do not feel as if my
>participation in helping out my fellow humans qualifies me for demi-god
>status or even for bragging rights.

Sorry, but the perception is that you've already chosen up sides by the above. You've not perceived that I was never criticizing the ham hobby en toto, just the minority who insist on the 1930s status quo at all costs. That minority assumes the God-like status repleat with nobless oblige talk-downs to the peasants and infrequent Sermons on the Antenna Mount.

>How do you define the "real world", Len? Scratch that, nevermind... I live
>there, so I know something about it.

Oh? Consider that I've been IN the real world longer, seen
more radio, operated more radio than most hams. I've done
it for half a century spanning the tube era and right into the
semiconductor age. The rest of the radio world is Very Big
and it covers a greater span of the spectrum than a few HF
bands allocated to hobbyists. I've been IN that Big World.

I define the "real world" as the here and now, where radio is
a communications tool that isn't magic or supernatural. It has
known physical properties...known to those who take the time
to understand it instead of being spoon-fed little snippets of
factoids or emotionally bent by clever advertising.

>I somehow doubt that most AR ops see the ARRL as some sort of divine oracle
>to be obeyed and supplicated to.

Supplicants never do. Their Belief is unshakable. They don't
know they are being manipulated by an even smaller minority
of that "church." Worse yet, most simply let that "church"
handle everything for them.

Watch what the PCTAs spout in here. They always point to
ARRL this or that for their references in/for/about ham radio.
Very few know what the RSGB has or much of anything else
by Yurp organizations or Ozzies or New Zealanders or
Japanese or other amateur groups aligned/misaligned with the
IARU. PCTAs are Believers, they wear the same virtual
uniform, march to the same virtual drumbeat, sing the same
virtual virtuous hymnals, and behave as if they lived in some
fantasyland where the only radio was done by amateurs and
broadcasters.

>C'mon, it's a hobby, AND a service, AND
>some people happen to get some pleasure out of any number of aspects that
>fall under those two categories. What is the problem with that?

There's NO problem with that...except when they divorce
themselves from reality or USE the service aspect glow to
light their own personal radiance (when their pilot is nearly
out). It does NOT require an amateur license to be of help
to one's nation, community, or whatever.

>You're not
>even an AR operator Len... so I really fail to see how this affects you
>personally.

It doesn't. My original intent was to engage in debate for the
removal of the morse code test for any amateur radio license
test. Instead, it has been a sort of firefight of personally-aimed
pejoratives fired by amateur marksmen shooting certificates
and titles as if they were ICBMs. Ptui. Those were just BMs.

I have had an interest in radio and electronics technology for over half a century. I've been IN far bigger leagues of HF comm than any defunct diplomat in here, probably working closer to Real high-capacity message traffic handling than the entire amateur NTS put together, having to keep all circuits open and running 24 hours a day, 7 days a week, without many fringe benefits of just 8-hour workdays. Radio and electronics was fascinating enough personally that I switched from an illustrator career to engineering early on in my life, did my whole career mainly in design engineering.

The purists, the traditionalists, the twilight zoners of hamism insist that professionalism is NOT the Amateur Way. They insist on "qualifications" by virtue of the ham license...as if none of the past half century's personal experience had any relevance. I am supposed to learn morse code because, according to the PCTAs, that is the ultimate meaningful skill of their little detached Brotherhood of Radio. Morsemanship wasn't relevant to the needs of the rest of the radio world of fifty years ago and it sure as hell isn't meaningful today.

Ah, but I must "sit for the ham test" to "prove a committment and dedication to the amateur community!" I'm sorry, but that is one of the silliest bogus-brained reasons I've ever heard. Ham radio doesn't operate by "different" radio physics principles and the ham radio waves don't propagate differently than other radio waves. Ham radio does NOT need any morse code test for a license or even any morse code skill at all. It isn't some magic pool of trained whatevers. That's just political hype. Ham radio is a fun hobby, an interesting one, a recreation. It doesn't need to be bogged down by beaurocracy, rigid inflexible rules, and absolute adherence to correct hamspeak.

Ham radio of today has become, for some, a sort of fantasy land where they can indulge in dumb little games of one-upmanship through credentials, certification, callsigns, and calumny directed to those "not of their 'hood." Some have discarded their real names, wanting to be identified only by callsigns. Identity transferrence, achieving something better than their present lives and social position. I need NONE of that. I certainly do not need to sit for some amateur test to prove anydamnthing to anybody about commitment or dedication to some mythical amateur community or ethos.

So, despite the insistence of the defunct diplomat in here, the bus driver, the hoagie muncher, the dill sergeant wanting a uniform real bad, the reverend working at an undisclosed location, or anyone else, that coveted amateur ticket won't be bought to radio never-neverland this week or next week.

Jackie, did you REALLY want an answer or were you just trolling because the bands were dead at the moment? :-)

>Americans over a point this minor?

The point I'm making is that Sarnoff and RCA were shameless/tireless
self-promoters. Bill, W7TI, talks of an era when people supposedly didn;t do
such things. I use the example of TV to show it did happen back then.

>The Farnsworth versus RCA controversy is
>worth noting however (inventors deserve credit).
>
The courts ruled that Farnsworth and Armstrong had their patent rights
infringed by Sarnoff's RCA. Zwyorkin was no dummy but he was no Farnsworth,
either.

Sarnoff just didn't like to pay licensing fees.

There were several bills and other hurdles to be surmounted after WW1, not just the Alexander bill. The WW1 shutdown included receivers. Getting transmitting licenses took more work.

It must be remembered that "amateur wireless" did not mean the same thing in 1919 as today. Same for the licenses. Do not confuse efforts to get the receiving ban lifted with efforts to get transmitting licenses issued.
>
And those were not the only times ham radio was threatened with extinction. In the 1920s there were at least three international conventions for radio allocations. Many other countries did not want wide bands or high power for hams. Some did not want ham radio at all.

>How much column space did QST give Gernsback, Fleming and Marconi (vs.
>Hiram Percy) for their efforts?

Not much! How much space did Gernsback give ARRL in his many publications?

And what about the efforts of Stewart and Warner?

What side were all of the above on when quiet hours were imposed?
>
>There was never an international movement to eliminate ham radio.
>
Wrong. See accounts of the 1924, 1925 and 1927 conventions.

There's also the game of inches. Rather than complete elimination, tie down ham radio with so many limitations (narrow bands, low power, etc.) that it could not survive.

>>> their selfish incentive licensing program to sell more publications.
>>
>> Amazing that some people are still wound up about that.
>>
First, some history:

Incentive licensing was NOT an ARRL idea. It was pushed by the FCC, starting as
early as 1958. Yes, ARRL leadership supported it, but so did a slim majority of
the membership.

And it was not a new idea, either. The pre-1951 ABC system made a big
distinction between Class A and other hams: No HF phone below 25 MHz unless you
have a Class A. The 1951 restructuring created the Extra, Novice and Tech
licenses, renamed the others, and would have continued to restrict the most
popular 'phone bands to Advanceds and Extras. But at the end of '52, FCC gave
all hams except Novices and Techs all operating privileges.
>>
The original 1963 ARRL proposal was very simple: Go back to the old system,
restricting HF phone on 75 to 15 meters to Advanceds and Extras. No subbands,
no additional code tests, just get an Advanced if you want to work 'phone. All
of the complexity was the result of other suggestions and proposals, and the
FCC.
>
>_____
>
>Mike, it really was better back then, and this is not just the musings of

>more fraternal. It was like a club where the newbies either upgraded
>within a year or dropped out and all the regulars were pretty much equal:
>Same license, same frequencies, same mode priviliges, everything.

Was there no animosity between SSB and AM folks? CW vs. 'phone? Where did
Technicians fit into the picture back then?

Did the folks with shiny Collins stations accept the
converted-surplus-and-homebrew folks as equals?

>When incentive licensing came, so did the "I have a better license, I'm a
>better ham" school of thought. And since there were several new levels,
>not just one, there was ample room for everybody to look down on someone
>else.

The Extra began in 1951. The Advanced is the old Class A, which wgoes back to
before WW2. There was a guy who was so ticked off about Gnerals and
Conditionals getting 'phone on HF that he would call CQ and say "no kids, no
lids, no space cadets, Class A operators only".

>In your local club, do the Extras hang out only with the Extras?

Nope. Not in any of the clubs I've belonged to.

>Do the Generals shun the Novices?

Nope. Not at all.

> Does everyone look down on the
>"No-Code Techs"? I'll bet most of the no-coders never come to their
>second meeting.

Not in any club I've been to. Nobody give's a [expletive deleted] what
somebody's license class is, unless they need a control op for something. Just
not an issue.
>
>There are lots of ways individuals could be recognized for their
>achievments and encouraged to improve themselves. Licensing turned out
>to be a very poor choice. You know what they say about the road to hell
>being paved with? Add incentive licensing to the list.

Take a look at the 1965 FCC plan: Advanceds demoted to General, four code test
speeds, distinctive callsign blocks for every license class from Novice to
Extra. Fortunately, the opposition of ARRL and others stopped the worst of
that.
>
Look at what's left of the 1968-69. Only three classes of license open to new
issues. One code test speed, kept alive by treaty requirement alone. Three
written tests from published Q&A pools. No waiting/experience period for any
license.

What system do you propose if/when FCC dumps Element 1?

The northwestern part of New York State (where I got this 2-land call) gets like that. Cold air comes across the lakes, picks up moisture and dumps it as snow. Lots of snow. I remember working alone outside in the country with temperatures (not windchills) in the negative teens and twenties. One night I was working on the car in an unheated garage, and it got down to 30 below before I was done and came inside.

>
>Ah, now comes the veritable heat wave-- supposed to be in the 20's and 30's

HAW! We also got weeks of overcast. One day I'm out working with Bud and Flash (nicknames used to protect the innocent) and the overcast breaks, so we start to see shadows. Flash looks up, squints, and asks "Hey, what's that?" Bud says "Sun". Flash looks at me and says "Is it safe to be out in it?"

Dry Yankee humor.

That isn't what I said. It was frowned on, it was rare and most people didn't behave that way because that was the custom. Today's custom is just the opposite. The bell-shaped curve rule applied then just like now. There's always the fringe element out at the ends.

And it wasn't "supposedly".
